Teaching scheme | Examination scheme
---|---
Lectures: 3 Hours per week | CIE: 30 Marks
Practical: 2 Hours per week | ESE: 70 Marks
Credits: 04 | Term work: 25 Marks

Course Objectives
1. To study the different Site organizational structures and services required
2. To study the material and personnel management
3. To study the total construction quality management
4. To study the different aspects of safety in construction and health codes

Course Contents

**Unit I** Site Organization: Organizational structures for construction Field, Site layout, Services required on site. 6 Hours

**Unit II** Material Management: Functions, Inventory control, EOQ, ABC analysis, Estimating requirements, Procurement and Storage of materials. 8 Hours

**Unit III** Personnel Management: Functions, Special characteristics, Manpower planning, Recruitment, Placement, Training and induction, Performance appraisal, Relevant labour laws. 6 Hours

**Unit IV** Construction Quality Management: SQC charts, Sampling techniques, Quality circles, ISO 9000, Management aspects. 6 Hours

**Unit V** Safety in Construction: Safety Requirements, Safety and health codes, Occupational diseases, Economic aspects, Management of accidents, Safety department. 6 Hours

**Unit VI** Work Study: Method study and Work measurement, Definitions, Objectives, Basic procedure, Standard time, Performance rating. Computers in Construction Management, Application in office, Field Computerized construction management. 8 Hours
Course Outcome (CO):

1. The students will be well versed with different Site Organizational structures and services required at site
2. The students will able to manage material and personnel issues
3. The students will be acquainted with total construction quality management
4. Students will be aware of different aspects of Safety in Construction and health codes

Text Books

1. Critical path methods in construction, ANTILL AND WOODHEADS.
2. CPM in construction management, J. J. O. BRIEN.
3. Principles of management and personal management, A. S. DESHPANDE
4. Accounting for management, S. K. BHATTARCHARYA
5. Work study, R. M. CURRIE
6. Principles of management, KOONTZ AND O DONNEL.
7. Personal management and industries relations, DALE.
Shivaji University, Kolhapur
First Year M. Tech. Civil Engineering (Construction and Management)
CM 102: Construction Equipment

<table>

<td></td>
</tr>
</tbody>
</table>

Course Objectives
1. To expose the students to various excavating, hauling, compacting and conveying equipment
2. To teach piles and pile driving equipment
3. To make the students familiar with tunnelling
4. To make the students familiar with concreting equipment

Course Contents

Unit II  Compacting Equipments – Properties of soil Soil Stabilization, Soil Compaction, Different types of compacting Equipments Rollers, Sheep foot rollers, pneumatic rollers, vibratory rollers, vibrating plates/ shoes. Vibratory compaction

Unit III  Conveying and Hosting Equipments - Different types of conveyors, power requirement damages during operations, Economy of transportations, Cableways and Ropeways, Different types of Hosting Equipments, such as winch, derricks and cranes. Rating of cranes and power requirement of cranes.

Unit IV  Piles and Pile Driving Equipments - Pile Classifications, Types of Piles, Pile driving and extracting equipments, Pile driving rigs, Pile driving hammers, Rating of pile hammers, Hammer accessories, Pile extractors.

Unit V  Tunnelling - Method of Tunnelling, Equipments of Convention of tunnelling, Jumbo, explosives, Temporary & permanent support and lining, Mucking Equipments, Using of moles, Use of laser beams to guide moles, Ventilations of Tunnels. advantages and disadvantages in using moles. Use of TBM’s.

**Course Outcome (CO):**

1. The students will able to understand the various excavating, hauling, compacting and conveying equipment
2. The students will able to Know about piles and piling equipment
3. The students will able to Study tunneling technology
4. The students will able Understand concreting equipment

**Text Books**

Shivaji University, Kolhapur
First Year M. Tech. Civil Engineering (Construction and Management)
CM 103: Project Economics and Financing

<table>

</tr>
<tr>
<td>: 2 Hours per week</td>
<td></td>
</tr>
<tr>
<td>Credits</td>
<td>: 04</td>
</tr>
</tbody>
</table>

Course Objectives
1. To study fundamentals of engineering economics
2. To understand the concepts of economic appraisal of projects and get expertise in using appraisal techniques.
3. To understand the importance of risk and study fundamentals of risk management
4. To make students aware about various options available for financing projects.

Course Content

**Unit I** Economics of Engineering Projects - Nominal and effective rate of interest, Discrete and continuous compounding, Inflation and real rate of interest, Capitalized cost. Economic factors, Equivalence and use of multiple factors.

**Unit II** Financial Appraisal Criteria - Discounting and Non-discounting criteria (Payback period, NPV, AW, ROR, IRR, Benefit- cost ration, Break even analysis). MARR & it’s estimation.

**Unit IV** Financing Projects - Sources of finance, equity, debit, securities, borrowings, debentures, Working capital requirement, Financial institutes, direct and indirect financial assistance.

**Unit V** Accounting - Site Accounts, Preparation, Reporting, Accounting records, Depreciations, Classification of construction costs, Standard budgeting and control.

**Unit VI** Public Private Participation in Projects - PPP Models, BOOT, BOT, Joint Ventures, Annuity, DBFO, External Commercial Borrowings, International Finance.
Course Outcome (CO):

1. The students will able to understand concepts of project economics
2. Able to use appraisal methods for financial feasibility studies of projects
3. The students will able to understand the role of risk management in projects
4. Able to understand accounting concepts and financial sources
5. The students will able to become familiar about various PPP models

Text Books

1. Engineering Economy By E. Paul Degarmo, William G. Sullivan
2. Project preparation Appraisal Implementation by Prasanna Chandra.
4. Construction Project Management By Chitkara
5. Engineering economics by Riggs
6. Corporate finance by Kuchal S. C.
7. Principles of Corporate Finance by Brealey R. A.
8. Principles of Engineering Economy by Grant Ireson/ Leavenworth.

Course Objectives
1. To understand the importance of entrepreneurship
2. To study Cost and time scheduling
3. To study Feasibility of projects
4. To Analyze financial practices
5. To Develop Civil engineering entrepreneurship

Course Contents

Unit I  General: Meaning and importance of entrepreneurship. Deflection and objectives of industrial estates, awareness and requirements of an entrepreneur, organization dealing with entrepreneurship Govt. and private. Socio-economic bases: Occupation Impact on line of manufacture, the impact of education.

Unit II Project: Selection by identification, size appropriate technology, Cost and time scheduling. Project Report: Backing market survey, demand and supply relation, equipment cost space and merit analysis recommendations.

Unit III Project Appraisal: Technical feasibility, commercial soundness, financial capability, economic viability, managerial aspects.

Unit IV Financial Analysis: Resources, loans, terms and conditions, working capital, repayment, security, financial institutes.

Unit V Problems Faced by Enterprise: Marketing, finance and taxes, raw and finished materials etc.

Unit VI Civil Engineering Entrepreneurship: Small scale, large scale, optimum size, typical areas and preparation of specialized aspects.
Course Outcome (CO):
1. Student will able to understand importance of entrepreneurship in construction industry.
2. Student will able to understand concept of project appraisal, financial analysis, problems in construction industry.
3. Student will be aware of different aspect of civil engineering entrepreneurship for small and large scale areas.

Text Books

1. Entrepreneurship & growth of enterprise in industrial estates, Dr. N. Gangadhar Rao (Deep & deep Publ.)
2. A complete guide to successful entrepreneurship, G.N. Pandey (Vikas Publ. House)
3. Project Appraisal Prasanna Chandra.
Shivaji University, Kolhapur

| CIE: 30 Marks           |
| ESE : 70 Marks          |

Course Objectives
1. To study Human Resources Development in construction industry
2. To study Job description and future needs
3. To study Recruitment procedures
4. To study Training & Development
5. To study Welfare of employees
6. To study Management relations

Course Contents

Unit I Introduction: Definition, history of human resource management, Objectives sections, HRD in construction industry, status of construction labour. 7

Unit II Human Resource Planning: Formulating human resource plans, various methods, job analysis, job specifications, and job design in construction projects, forecasting personal needs and supply in construction sector. 7

Unit III Recruitment and Selection: Selecting the project manager and project team, external and internal recruitment, data gathering methods, skill requirements of construction personnel. 6

Unit IV Training and Development: The training process, individual and organizational development, performance appraisal, use of performance appraisal information, establishing the evaluation system. 7

Unit V Employee Benefits: Employee health and safety, wage and salary, administration, incentive system, wages of construction industry, retirement and pensions. 7

Unit VI Employee Management Relations: Collective bargaining, trade unions, connected with construction industry, trade unions act, Labour Welfare Act, Payment of Wages Act, Worker’s compensation Act, Contract Labour Act, management on conflict. 6
Course Outcome (CO):

1. The students will able to know the history of HRD and necessity of HRD in Construction Industry.
2. The students will able to plan human resource in construction activity.
3. The students will able to study about recruitment and selection
4. Students will be aware of different training process
5. Students will be aware of employee benefits and their health.
6. Students will be able to study employee management relations

</tbody>
</table>

Course Objectives
1. To study Serviceability and Durability Quality assurance
2. To understand Maintenance and Repair Strategies
3. To study Materials for Repair Special concretes
4. To study and understand techniques of repairs
5. To study the concept of Repairs to structures

Course Contents

Unit I Influence on Serviceability And Durability: Quality assurance for concrete construction as built environment concrete properties viz strength, permeability, thermal properties and cracking. Effects due to climate, temperature, chemicals, wear and erosion on, Design and construction errors, corrosion mechanism, Effects of cover thickness and cracking, methods of corrosion Protection, corrosion inhibitors, corrosion resistant steels, coatings, cathodic protection 8

Unit II Maintenance And Repair Strategies: Definition Maintenance, repair and rehabilitation, Factors of Maintenance importance of Maintenance Preventive measures on various aspects Inspection, Assessment procedure for evaluating a damaged structure causes of deterioration testing techniques. 6

Unit III Materials For Repair: Special concretes and mortar, concrete chemicals, special elements for accelerated strength gain, Expansive cement, polymer concrete, sulphur in Filtrated concrete, ferro cement, Fibre reinforced concrete. 6

Unit IV Techniques For Repair: Rust eliminators and polymers coating for rebars during repair foamed concrete, mortar and dry pack, vacuum concrete, 7

Unit V Grout, Gunite and Shotcrete: Epoxy injection, Mortar repair for cracks, shoring and underpinning. Maintenance and rehabilitation of bridges, dams and offshore structures. 7

Unit VI. Examples of Repair To Structures: Repairs to overcome low member strength, Deflection, Cracking, Chemical disruption, weathering wear, fire, leakage, marine exposure. Engineered demolition techniques for dilapidated structures case studies. 6
Course Outcome (CO):

1. Student will able to Understand the various techniques of Serviceability And Durability.
2. Student will able to Know about Maintenance and Repair Strategies.
3. Student will able to Study techniques of Repairs.
4. Student will able to understand the repairing techniques of structures.

Text Books

2. Training Course notes on Damage Assessment and repair in Low Cost Ho using Santhakumar, A.R.

</tr>
</tbody>
</table>

Course objectives
1. To convey the importance of ground improvement to the students.
2. To make the students familiar with different ground improvement techniques.
3. To make the students understand the theoretical background for different ground improvement techniques such as stone column, soil nailing.
4. To elaborate the design methods for some ground improvement techniques.
5. To make the students aware of the applications of ground improvement techniques.

Course Contents

Unit I Definition of ground improvement: objectives, classification of ground improvement techniques, suitability of different techniques, preloading: need, preloading without vertical drain, preloading with vertical drain, dynamic consolidation

Unit II Stone column: Design of stone column: unit cell concept, area replacement ratio, spacing and diameter, depth, stress ratio, Load bearing capacity of individual stone column, settlement of stone column, Failure mechanism

Unit III Ground anchors: components, load transfer mechanism, rock anchors, anchors in granular soil, anchors in cohesive soil, Rock bolt, types, action of rock bolt, Soil nailing, analysis of nailed soil.

Unit V Earth reinforcement: mechanism and concept, stress strain relationship of reinforced soil, design theories, stability analysis of retaining wall: tie back analysis, coherent gravity analysis, application areas of earth reinforcement.

Unit VI Geosynthetics: – Types, functions, Application of geosynthetics: reinforcement, separator, filter, drainage, Selection of geosynthetics; damage and durability of geosynthetics.
Course Outcome (CO):

1. Students will be able to understand importance of ground improvement to the students
2. Students will able to understand different ground improvement techniques
3. Students will be able to understand the theoretical background for different ground improvement techniques such as stone column, soil nailing
4. Students will be able to elaborate the design methods for some ground improvement Techniques.
5. Students will be able to understand the applications of ground improvement techniques

Text Books:

1. Ground improvement techniques by Dr. P Purushothma Raj
2. Ground improvement by Klaus Kirsch
3. An introduction to ground improvement engineering by Satyendra Mittal
4. Ground improvement techniques by Nihar Ranjan Patra
5. Reinforced soil and its engineering applications by Swami Saran
6. Earth reinforcement and soil structures by Colin JFP Jones
7. An introduction to soil reinforcement and geosynthetics by G. L. Sivakumar Babu
   Geotechnical engineering by Shashi K Gulhati and Manoj Datta

Course objectives
1. Post graduate students should know the state of the art in the relevant subjects of construction & management.
2. Post graduate students should know the experimental procedure to validate theories related to construction & management.
3. Post graduate students should learn how to prepare and present research project.

Course Contents
1. Seminar-I to be delivered by the students on general topic related to civil (construction & management) to be evaluated by three members committee headed by HOD wherein guide should be one of the members.

List of Submission
1. Seminar report duly signed by respective guide and head of department

Course Outcome (CO):
1. Post graduate will know the state of the art in the relevant subjects of construction & management.
2. Post graduate will know the experimental procedure to validate theories related to construction & management.
3. Post graduate will be able to prepare and present research topic.

Course Objectives
1. To expose the students to Indian Contract and Arbitration act
2. To provide knowledge about bailment and international contracting
3. To expose the students to Labour laws
4. To provide the knowledge about safety acts

Course Contents

Unit I Professional Practice and Administration Contracts: The standard form of building contracts. The right of building owner, Third parties, Indian contract Act, Sale of Goods Act, Professional Ethics. RERA.

Unit II Arbitration and Award: Indian Arbitration Act, Arbitration Agreement, Conduct of Arbitration, Power and Duties of Arbitration, Rules of Evidence, E- Tendering, Preparation and publication of ward, Methods of Enforcement impending and Awards.

Unit V Industrial Act and Labour Laws: Industrial Dispute Act, Payment of Wages Act.

Course Outcome (CO):
1. Students will learn Indian contract act, Arbitration act and contract administration
2. Student will gain knowledge about bailment and FIDIC
3. Students will understand the labour laws
4. Students will be exposed to safety engineering and relevant acts.

Text Books:
1. Indian arbitration Act by B. S. Patil
3. Safety Engineering, Govt. of India Publicaiton
4. Professional Practice, RoshanNamavati.
5. Legal Aspects of building and Engineering Contracts by B. S. Patil
4. Indian contract Act Avatar singh
5. Indian contract Act Jhamb

CIE: 30 Marks
ESE: 70 Marks
Term work: 25 Marks

Course objectives
1. To understand the concept of Probability & its Distribution.
2. To understand Testing of Hypothesis and its Tests.
3. To understand the concept of Research Methodology & Literature Survey.
4. To understand the importance of Data collection.

Course Contents

**Unit II  Distributions:** Theoretical probability Distributions: Binomial Distribution, Poisson distribution. Normal Distribution, Exponential Distribution, Beta, Gamma.

**Unit III  Testing:** Testing Hypothesis: Sampling of distribution – Test based on Normal Distribution, students- t test, chisquare, K-S test for goodness of fit and distribution. Analysis of variance- one way & two way classification.

**Unit IV  Introduction to Research:** Meaning of research ,types of research, process of research, Sources of research problem, Criteria / Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem, formulation of research hypotheses. Search for causation.

**Unit V  Literature survey:** Definition of literature and literature survey, need of literature survey, sources of literature, elements and objectives of literature survey, styles of literature survey, and strategies of literature survey.

**Unit VI  Data collection:** Measuring, Sampling and Scaling—Classification of data, benefits and drawbacks of data, evaluation of data, qualitative methods of data collection, methods of qualitative research, Sampling,sample size, sampling strategy, attitude measurement and scaling, types of measurements, criteria of good measurements, classification of scales.
Course Outcomes (CO):
1. Students will be able to study the concept of Probability & its Distribution
2. Students will be able to understand Hypothesis Testing.
3. Students will be able to know about Research Methodology & Literature Survey.
4. Students will be able to understand the importance of Data collection.

Text Books:

I. Statistical Methods:
7. Shrivastava, Shenoy & Sharma, Quantitative Techniques for Managerial Decisions,
8. Applied Statistics for Civil and Environmental Engineers by Kottegoda.—Stratford

II. Research Methodology:
10. Research Methods for Business—Sekaran—Wiley, India
13. Research Methodology: An Introduction’ by Wayne Goddard and Stuart Melville
15. Research in Education—John Best and James Kahn, Prentice Hall of India Pvt. Ltd.

Course Objectives
1. To study underground and underwater construction methods
2. To understand techniques & methods of Steel Construction.
3. To understand cofferdams construction, caissons design & Piles
4. To study pre fabricated construction techniques
5. To study forces and design in vibration controlled foundation.
6. To study formwork, retaining wall construction techniques.

Course Contents

**Unit I**  

**Unit II**  

**Unit III**  
**Coffer Dams and Caissons**: Land cofferdams, soldier beam and horizontal Sheeteting techniques, Design considerations, sinking rate, open caissons, pneumatic caissons. Machine bored caissons. Drop caissons. Details design and construction Case Studies. Piling – Behaviour of single pile and a group of piles during driving, under loads- Ultimate loads on driven and cast in situ piles, construction details of precast piles, Pre-stressed, piles steel piles, friction piles. Driven piles, Bored piles, Large diameter bored piles, negative and positive friction.
Unit IV Pre-fabricated Construction: Types, standardization of components, sized and economic, Fabrication techniques transport erection, jointing, fabrication, techniques, transports, erection, jointing of prefab components, light weight panels.

Unit V Vibration Controlled Foundation: Free vibration, forced, Damping vibrating machine, weight of foundation, Natural frequency of Machine foundation and soil system, Design Procedure, Causes and effects of vibration transmitted through soil.

Unit VI Formwork: Types components, design of formwork, special types of formwork such as slip form: Removal of formwork, cost aspect of formwork.
(A) Retaining Walls: Types, construction techniques.
(B) Preservation of structures in various climatic conditions.

Course Outcome (CO):
1. Students will be able to understand underground and underwater construction methods
2. Students will be able to study the techniques & methods of Steel Construction.
3. Students will be able to understand cofferdams construction, caissons design & Piles
4. Students will be able to know about pre fabricated construction techniques
5. Students will be able to understand the forces and design in vibration controlled foundation.
6. Students will be able to understand formwork, retaining wall construction techniques.

Text Books:
1. Wells and Caissons – Vijaya Singh, New Chand & Bros, Roorkee
4. Large Bored Piles-Institute of Civil Engineers 1966 London
6. Construction & Geotechnical Methods in Foundation Engineering R. M. Koeme : Mcgraw Hill Book Co
7. Construction Planning Equipments and Methods Peurifey RI
8. Hand Book of Civil Engineering- stubb
9. Formwork Design and Construction-Wynn
10. Foundation Engineering- Tomlinson
12. Art of Tunnelling- Karl Szychy
14. Formwork Construction and Practice – John G. Richardson 6 The Engg. of large Dams (vol I & II) by Hemy H. Thomas
15. Prefaricated Construction by Mokk.

**Course Objectives:**
1. To expose the students to various composite construction, formwork design.
2. To make students familiar with new materials for construction & Land Reclamation techniques.
3. To study Concept of Power generation & Understand the Techniques of Bridges
4. To understand the advanced techniques of concrete pavement.

**Course Contents**

### Unit I  Composite Construction: Composite Vs Non composite action, composite steel concrete construction.
**Formwork:** Materials for formwork, special types of formwork, design of formwork.

### Unit II  New Materials for construction: such as Geosynetics, Epoxy resins, Adhesives, MDF(Medium Density Fibre), FRC (Fibre Reinforced Concrete) FRP (Fibre Reinforced Polymer), Polymer based composites
**Land Reclamation:** Technical progress, drainage for land reclamation, Structural Improvement.

### Unit III  Construction of Power: Generation, structures, Atomic Power Stations, Thermal Power Stations, Wind- Mills

### Unit IV  A) Rehabilitation of Bridges: Necessity and methods of strengthening, Preservation of Bridges.
**B) Retaining Structures Like:** Diaphragm walls, advanced methods of their Construction.

### Unit V  A) Construction of concrete pavement by techniques like: vaccum processing, Revibrated concrete Roller – compacted concrete.
**B) Use of Techniques Like:** Slip form paving in pavement construction using Wet Mix Macadam in road construction.
Unit VI  **Advanced Techniques Like Roller:** compacted concrete, vaccum, Ready Mix Concrete dewatering in concrete slab construction, Reinforced earth construction, foundation strengthening.

**Course Outcome (CO)**
1. Student will able to learn various composite construction & concept of Formwork design.
2. Students will able to understand new materials for construction & Land Reclamation Techniques.
3. Students will be able to study the Concept of Power generation & Understand the Techniques of Bridges
4. Understand the advanced techniques of concrete pavement.

**Text Books:**

1. Formwork design and construction – Wynn.
3. Technical progress in land reclamation by B. G. Shtepa.
5. Bridge Engineering by Ponnuswamy
7. Monthly: Civil Engineering & Construction Review
Shivaji University, Kolhapur

Course Objectives:
1. To study different modern construction materials.
2. To study characteristics, properties, design concept of concrete.
3. To study new construction techniques & understand concept of high-rise buildings.
4. To study the components of water supply and sanitation arrangements in a building
5. To study ventilation, air conditioning and fire safety installations in a building
6. To introduce the concepts of intelligent building

Course Contents

Hours
8

Unit II: Concrete: Concrete Ingredients Manufacture, Batching plants, RMC. Properties of fresh concrete, Slump, Flow and compaction. Principles of hardened Concrete. Compressive, Tensile and shear strength. Modulus of rupture, Tests Mix specification, Mix proportioning – IS method – High Strength Concrete and HPC Other types of Concrete – Code Practices

6

Unit III: High rise buildings – Construction methods and techniques using in-situ concrete, Precast Concrete & Structural Steel, finished concrete, tunnel form, fire Fighting, Safety. Innovative methods of construction – Slip form technology, Jump form technology, Dry wall technology, Plastering Machines.

6
Unit IV: **Water Supply Systems**: Water quality, Purification and treatment- water supply systems -distribution systems in small towns -types of pipes used -laying jointing -testing -testing for water tightness plumbing system for building -internal supply in buildings -municipal bye laws and regulations -Rain Water Harvesting -Sanitation in buildings -arrangement of sewerage systems in housing -pipe systems -storm water drainage from buildings -septic and sewage treatment plant – collection, conveyance and disposal of town refuse systems

Unit V: **Ventilation and Its Importance**
Ventilation and its importance-natural and artificial systems -Window type and packaged air-conditioners-chilled water plant -fan coil systems-water piping -cooling load -air conditioning systems for different types of buildings -protection against fire to be caused by A.C.Systems..

Unit VI: **Intelligent Buildings**
Intelligent buildings -Building automation-Smart buildings - Building services in high rise buildings-Green buildings-Energy efficient buildings for various zones -Case studies of residence, office buildings and other buildings in each zones.
Course Outcome (CO):

1. Students will able to understand modern construction materials.
2. Students will able to understand characteristics, properties, design concept of concrete.
3. Students will able to know the new construction techniques & understand concept of high-rise buildings.
4. Students will able to understand the components of water supply and sanitation arrangements in a building.
5. Students will able to understand ventilation, air conditioning and fire safety installations in a building.
6. To introduce the concepts of intelligent building.

Text Books:

5. Construction Equipment Planning and Applications – Dr. Mahesh Varma
6. Manuals, brochures, publications from construction companies, firms etc.
7. Reports of actual works executed.
8. NICMAR Publications on Construction Engineering.

Course Objectives
1. To study various infrastructure projects in construction industry.
2. To carry out Detailed project report with case study undertaken.

Course Contents
1. To prepare detailed Project Report (DPR) of any one Infrastructure project like, Housing development, Bridge, Highway, Tunnel etc.
2. With reference to above DPR any case study of project started within last two years from respective academic year of admission.
3. Submission of DPR & Case study report.

Course Outcome (CO)
1. Student will be able to study infrastructure projects in construction industry.
2. Student will be able to carry out Detailed project report with case study undertaken.
Course objectives:

1. Post graduate will able to know the art in the relevant subjects of construction & management
2. Post graduate will know the experimental procedure to validate theories related to construction & Management
3. Post graduate will know able to conduct extensive literature survey in subjects of Construction & Management
4. Post graduate will know about how to prepare and present research project.

Course Contents

1. Seminar-II to be delivered by the students on general topic related to construction engineering to be evaluated by three members committee headed by HOD wherein guide should be one of the members.

List of Submission

1. Seminar report duly signed by respective guide and head of department

Course Outcome (CO):

1. Post graduate will know the state of the art in the relevant subjects of construction Engineering.
2. Post graduate will know the experimental procedure to validate theories related to Construction Engineering.
3. Post graduate will able to conduct extensive literature survey in subjects of construction engineering.
4. Post graduate will able to learn how to prepare and present research project.
Shivaji University, Kolhapur
Second Year M. Tech. Civil Engineering (Construction and Management)
CM 301: Industrial Training

</tbody>
</table>

Course Objectives
1. To expose the students to various elements of construction techniques of major work.
2. To study the live construction projects through field visits...
3. To learn presentation skills for technical report.
4. To prepare report of the industrial training.

Course Content

The students are required to undergo training in any area related to Construction and Management as mentioned in the syllabus for 21 working days beyond the academic schedule after the completion of First year M. Tech. Civil Engineering (Construction and Management) .. Students shall submit the report of the Industrial Training taken and necessary certificate from the organization where such training is undertaken.

Assessment will be done at the end of III rd Semester by project guide along with Project Term Work Assessment Committee.

Course Outcome (CO)

1. Student will able to learn various construction techniques.
2. Students will able to read drawings of the various projects.

</tbody>
</table>

Course Objectives
1. To expose the students for Certified course/STTPs in Civil Engineering.
2. To prepare short project report and certificate copy of completed STTPs.

Course Contents
1. To carryout Certified course/STTPs organized by Reputed Institutes for more than minimum 3 Days.
2. Submission of 3-5 pages report & certificate copy to the respective Guide.

Course Outcome (CO)
1. Student will be able to complete Certified course/STTPs.
2. Student will be able to prepare short report & submit certificate copy.

<td>Term work : -100 Marks</td>
</tr>
</tbody>
</table>

Course Objectives
1. To perform extensive literature survey on the research topic of work.
2. To identify the problem statement for the research work.
3. To decide methodology for the research work.
4. To carry out initial mathematical modelling or experimental set up.

Course Contents
1. Dissertation (Phase-I): Student has to submit the report and deliver the seminar based on 25% or more work on Dissertation topic. It is to be evaluated internally by three members panel of examiners headed by HOD wherein guide should be one of the members of the panel. Last date of submission of report shall be two weeks before the end of semester.

List of Submission
1. Dissertation report of phase-I duly signed by respective guide and head of department

Course Outcome (CO):
1. Post graduate will know will about how to perform extensive literature survey on the research topic of work.
2. Post graduate will able to identify the problem statement for the research work.
3. Post graduate will able to decide methodology for the research work.
4. Post graduate will able to carry out initial mathematical modelling or experimental set up.

</tbody>
</table>

Course Objectives
1. To perform further literature survey on the research topic of work.
2. To carry out detailed mathematical modelling or experimental validation.
3. To draw inferences from the findings and present conclusion.
4. To learn presentation skills for technical report.

Course Contents
1. Dissertation (Phase-II): Internal assessment of dissertation (complete work) is to be carried out by the guide for 100 marks. The external assessment of dissertation work is to be carried out by panel of examiners consisting of internal (guide) and external examiner for 100 marks. Candidate shall present the entire work on Dissertation, followed by viva-voce. Last date of submission of dissertation will be the end of the semester.

List of Submission

1. Dissertation report of phase-II duly signed by respective guide and head of department

Course Outcome (CO)

1. Post graduate will able to study technical reports on the research topic of work.
2. Post graduate will able to carry out detailed mathematical modelling or experimental Validation.
3. Post graduate will able to draw inferences from the findings and present conclusion.
4. Post graduate will able to learn presentation skills for technical report.
