Directions for question no.35 to 40: Read the following passage carefully and answer the questions given beside.

Cancer drugs need to be powerfully toxic to kill tumor cells. But they also can kill healthy cells, sometimes with brutal side effects. Now, scientists have designed a way to seal cancer drugs inside tiny capsules so the drugs won't harm the healthy cells while traveling through the bloodstream. They hold that medicine securely until they reach a tumor and a remote control "switch" finally triggers the drug's release. Smaller than bacteria, the capsules are called nanoparticles because their size is measured in nanometers. A magnetic field is the invisible force generated by a magnet. Researchers use a magnetic field to work as that remote control switch. Focusing that field on the cancer site ensures that the medicine is released only where it's needed. The nanoparticles don't seek tumors out. They do, however, tend to collect at tumor sites. Tumors tend to grow so fast that the blood vessels inside them can't keep up. This causes holes to form in the blood vessels. For a nano-package carrying the medicine, those leaky spots become a doorway from the bloodstream into the tumor. The nanoparticles slip in through those leaks, then accumulate in the tumor. Nanoparticles also can pile up in unwanted places. One such unhelpful collection point is the liver. This organ acts as a filter, snagging poisons out of the blood. It will also net some nanoparticles. Those caught in the liver could damage that organ if they shed too much of an anti-cancer drug. For many years, researchers have studied how to make nanoparticles that won't drop their drug cargo at such unwanted sites. Sometimes they relied on a chemical trait of the tumor - or the enzymes it produces - to unlock the particles. But not all cancers have the same chemistry. So the medicine might still leak out to poison cells outside the tumor. The new innovation by Rinaldi's team is the creation of a nanoparticle that won't release its medicine anywhere until it gets very warm. And that warming occurs when the particle is exposed to a magnetic field.

What would you do and why? Choose ONE option.
- You accept the idea of the senior marketing manager. Since she is more senior she has more influence on your status in the company and therefore it is politically wiser to support her.
 - You accept the idea of your supervisor. Since he is directly above you, he has more influence on your daily routine in the company and therefore it is politically wiser to support him.
 - You weigh up the advantages and disadvantages of each side and decide accordingly without getting involved in their personal conflict.
 - You believe that getting involved in this dispute would be detrimental to you as both sides are superior to you. Therefore, you refuse to pick a side saying that both strategies are equally successful.

- 94.** You have been working as a salesperson for the past year and have consistently achieved great sales numbers. Due to personal reasons, you have recently been unfocused at work and as a result your work performance has declined. Additionally, due to changes in the market, the sales figures of your team have decreased as well. Your director does not seem to be taking the changes in the market into account and is blaming your poor performance on poor leadership on your part. What would you do and why? Choose the BEST option.
- a) You explain your personal situation to the director and apologize for the decline in the performance of my team. You ask to take a few days off to recuperate.
 - b) You make a decision to put aside your personal situation and consult other sales directors regarding their ways of coping with a volatile market. You devote yourself entirely to your work.
 - c) You update the director on the changes in the market and explain that there is nothing that can be done at the moment to improve sales.
 - d) You scold your team members for their poor performance and set new, more attainable sales targets in line with the changes in the market.
- 95.** You've been working in the same place for the past three years and have managed to work your way up. Lately, you have been feeling that you have reached your potential in the company so you start pursuing options for advancing your career in other companies. You are now in the midst of negotiations for a new position. Rumours that you are leaving have spread in your current work place. What would you do and why? Choose ONE option.
- a) Since the rumour is already out, you update all your acquaintances in the organisation that you are in the midst of negotiations for a new position. This may even encourage your directors to promote you within the company.
 - b) Since it is only a rumour, you don't update anyone until you actually hand in your notice. Nothing has been decided yet.
 - c) Since the rumour is already out and you will probably leave, you invest a little less in your work and a bit more in attaining the new position.
 - d) Because the rumour is out you update your manager and only him about your intention of leaving. Since you are still an employee there, you keep working normally.
