1. Professional Core Course – Production Engineering (PCC-PE) are compulsory
2. Open Elective Courses- Production Engineering (OEC-PE) are compulsory

COURSE CODE AND DEFINITION
Semester V

| Sr. No. | Code No. | Subject | Credits |
|----------------|-----------------|--------------------------------|----------------|
| 1 | PCC-PE301 | Metallurgy | 4 |
| 2 | PCC-PE302 | Theory of Machines-II | 4 |
| 3 | PCC-PE303 | Design of Machine Elements | 4 |
| 4 | PCC-PE304 | Metrology | 4 |
| 5 | PCC-PE305 | Manufacturing Technology | 4 |
| 6 | PCC-PE306 | WS Practice -V | 1 |
| 7 | OEC-PE307 | Open Elective-I | 3 |
| 8 | PCC-PE308 | Professional Skill Development | 1 |
| | | | 25 |

Semester VI

| Sr. No. | Code No. | Subject | Credits |
|----------------|-----------------|--|----------------|
| 1 | PCC-PE309 | Industrial Hydraulics and Pneumatics | 4 |
| 2 | PCC-PE310 | Design of jigs, fixtures and Dies | 5 |
| 3 | PCC-PE311 | Industrial Management and Quality Management | 4 |
| 4 | PCC-PE312 | Machine Tool Design | 4 |
| 5 | PCC-PE313 | CAM laboratory and CNC Workshop Practice | 2 |
| 6 | OEC-PE314 | Open Elective-II | 3 |
| 7 | PCC-PE315 | Research Seminar | 1 |
| 8 | PCC-PE316 | Mini Project | 2 |
| TOTAL | | | 25 |

|----------------|-----------------|--------------------------|----------------|
| 1 | PCC-PE408 | Costing and Cost Control | 4 |
| 2 | PCC-PE409 | Industrial Engineering | 4 |
| 3 | PCC-PE410 | Finite Element Analysis | 5 |
| 4 | PCE-PE411 | Elective II | 4 |
| 5 | PCE-PE412 | Elective III | 4 |
| 6 | PW-PE413 | Project Work Phase II | 4 |
| | | Total | 25 |

T. Y. B. Tech (Production Engineering) –Semester V

METALLURGY

Course Code: PCC-PE 301

Teaching Scheme:

Lectures: 3 Hrs. / Week Theory Paper(3Hrs)

Practical: 2 Hrs. /Week/Batch

Credits: 4

Examination Scheme:

ESE: 70 Marks

CIE: 30 Marks

Term Work: 25

Pre-requisite: Fundamental knowledge of crystals structure and meaning of materials, chemistry of Metals and alloys.

Course Objectives:

- 1) To select proper ferrous or nonferrous metal material as per given application by considering metallurgical and mechanical properties in accordance with its phase diagram with proper justification.
- 2) To explain cooling of any given alloys schematically.
- 3) To calculate percentage of various phases present in solid solution at given temp and composition by using lever rule analytically.
- 4) To draw various types of equilibrium diagrams of Ferrous and Non Ferrous materials, TTT and CCT diagram graphically.
- 5) To clearly distinguish between various types of heat treatment process.
- 6) To understand processing of Powder Metallurgy parts.

Course Outcomes: At the end of successful completion of course, the students will be able to

1. Understand basic concept of metal structure.
2. Understand fundamental knowledge of Ferrous and Non Ferrous Metal.
3. Selection of Metals and Alloys for different engineering application.
4. Understand need of Heat treatment and various heat treatment processes.
5. Understand and distinguish between various types of heat treatment process
6. Applications of Powder Metallurgy.

Unit 1: Introduction to Composite Materials, Metals and alloy system

(07)

Introduction to Advanced & Composite materials for manufacturing Industrial Applications, phases, components, degree of freedom, Construction of phase diagram using cooling curves, Isomorphous systems, Eutectic system, Eutectoid, Peritectic. Solid solutions and its types, Intermediate phases

Unit 2: Study of ferrous equilibrium diagrams, with respect to compositions, properties and applications for following alloys (07)

Fe-Fe₃C Equilibrium diagram for plain carbon steels, Effect of carbon on structure and properties, Free cutting steels, Alloy steels, Dual phase steels, micro alloyed steels, High strength low alloy steels, Tool steels, Stainless steels, Heat resisting steels, HSLA steels, Low temperature alloys, Invar, Hadfield steel, Spring steel, Cast Irons - Fe-C Equilibrium Diagram, Factors Affecting Structure of C.I.(graphitization), C.E of cast iron, Alloy C.I., SG Iron, Ni-Hard, modified Ni-Hard and Ni-Resists,

Unit 3: Study of non-ferrous equilibrium diagrams, compositions, properties, and applications of important alloys and material testing (05)

Copper-based alloys, Aluminum-based alloys, modification treatment, Titanium- and Mg based, Non-ferrous equilibrium diagrams - Pb-Sn : solders, Sn-Sb : Babbitt. Material testing- Tensile test, Izod and Charpy impact test, Fatigue test, Hardness measurement methods.

Unit 4: Introduction and Principles of Heat Treatment Processes of Steels, Heat treatment furnaces, atmospheres, defects and energy economy (08)

Introduction to heat treatment Process, purpose, process variables, Transformation of Pearlite on heating and cooling, Bainite and martensite Transformation, TTT and CCT Diagram and significance, Effect of alloying elements on TTT diagram and its significance, Heat treatment furnaces, control systems, furnace atmospheres, Heat treatment defects, causes and remedies, Energy economy of heat treatment processes.

Unit 5: Heat treatment process of steels, cast iron and Non-ferrous alloys. (09)

Annealing, Hardening, Normalizing - Classification comparison and application of processes, hardenability, factors affecting hardenability, determination of hardenability, hardening methods, Tempering- Purposes, types, structural changes during tempering, temper brittleness. Heat treatment process of Cast Irons-Stress relief annealing, normalizing, hardening, surface hardening and malleablising. Surface and case hardening processes: Case Hardening, Carburizing, Nitriding, Surface Hardening: Flame hardening, induction hardening, electron beam hardening and laser hardening, Case depth measurement - hardness method, chemical method, microstructure method.

Unit 6: Powder Metallurgy (04)

Importance of process as a manufacturing technique, advantages and limitations of powder metallurgy, Methods of powder manufacture, powder conditioning, blending and mixing, Powder compaction - Methods of compaction, Sintering - Types of sintering, structure and property changes during sintering, sintering atmospheres and their importance. Finishing operations - Sizing, heat treatment, surface treatment, electroplating and impregnation treatments, Applications as Self-lubricating (porous) bearings, electric contact materials, filters, magnets, sintered friction materials, cutting tools and cermets, flow charts for manufacturing of above components.

Term Work: Study should conduct following experiments

Experiment No.1 Study of Metallurgical microscope and Metallography

Experiment No.2 Study of microstructure of hypo eutectoid, Eutectoid steel and Hypereutectoid

Experiment No.3 Study of microstructure of cast iron as SG, Gray, White, Chilled, Malleable Cast Irons

Experiment No.4 Study of microstructure of Non-ferrous alloys as Brass, Bronze, Babbitts

Experiment No.5 Tensile test of MS, Al and Brass material

Experiment No.6 Izod and Charpy impact test of MS, Al and Brass material

Experiment No.8 Study of Hardenability of steel

Experiment No.9 Study of heat treatment processes and furnaces

Experiment No.9 Hardness measurement by Brinell and Rockwell method.

T. Y. B. Tech (Production Engineering) –Semester V

THEORY OF MACHINE II

Course Code:PCC-PE302

Teaching Scheme:

Lectures: 3 Hrs./Week

Practical: 2 Hrs. /Week/Batch

Credits: 4

Examination Scheme:

Theory Paper: 3Hrs

ESE: 70 Marks, CIE: 30Marks

Term Work: 25 Marks

Pre-requisites: Theory of machines - I

Course Learning Objectives:

- 1) To understand the basics of gear, motion analysis and selection of gears for various applications.
- 2) To demonstrate different types of gear trains and its applications.
- 3) To acquaint with working principles and applications of gyroscope and governors
- 4) To evaluate the effect of static and dynamic balancing of rotary and reciprocating masses.
- 5) To aware the students about the phenomenon of vibrations and its effects.

Course Outcomes: At the end of this course, student will be able to

1. Understand the need of gear, gear train, governors, gyroscope etc.
2. Analyze different types of gear trains.
3. To solve the problems on static and dynamic balancing using graphical and analytical method.
4. Understand the concept of basics of vibrations from application point of view.

Unit-1

Gear: Introduction, law of gearing, gear terminology, involute and cycloidal profiles, length of path of contact, arc of contact, contact ratio, interference of involute gear teeth, helical and double helical gears (5)

Unit-2

Gear Trains: Types of gear trains, analysis of gear trains, analysis of differential gear box, torques in epicyclic gear train. (4)

Unit-3

Balancing: Static and dynamic balancing, Balancing of rotary masses: masses rotating in the same plane and masses rotating in different planes, Balancing of reciprocating masses: primary and secondary balancing, Balancing of locomotives, Balancing of multi-cylinder inline engines, balancing of V-engines. (6)

Unit-4

Gyroscope: Introduction, Gyroscopic couple, Effect of gyroscopic couple on motion of aero plane, naval ship, two and four wheelers, Gyroscopic stabilization (5)

Unit-5

5.1 Governors: Functions of governor, types of governors, characteristics of governor, effort and power of governor. (5)

Flywheel: Crank effort, turning moment on crankshaft, turning moment diagram, fluctuations of energy and speed. (4)

Unit-6

Vibrations:

6.1 Longitudinal and transverse vibrations: Simple Harmonic Motion vibration of single degree freedom system: Undamped, damped and forced vibration systems, Two degrees of freedom systems. (4)

6.2 Torsional vibrations: Introduction, natural frequency for single, two and three rotor system, bifilar, trifler suspension system, torsionally equivalent shafts, free torsional vibrations of a geared system. (5)

Term Work:

Minimum 8 experiments out of first 10 experiments from the following list.

- 1) Generation of involute gear tooth profile.
- 2) Study and analysis of differential gearbox.
- 3) Experiment on verification of static and dynamic balancing principle.
- 4) Experimental verification of gyroscopic principle.
- 5) Determination of the governor characteristics of Porter and/or Hartnell governor.
- 6) Experiment on free longitudinal vibrations
- 7) Experiment on trifler suspension system.
- 8) Experiment on two rotor system.
- 9) Experiment on forced vibration

- 10) Measurement of vibrations by using vibration-measuring instrument.
- 11) At least one industrial visit to study applications related to the subject and submission of the relevant report.

Text Books:

- 1) Theory of Machines and Mechanisms, by P. L. Ballaney, (Khanna Publishers, Delhi)
- 2) Theory of Machines, by S. S. Ratan, (TMH)
- 3) Theory of Mechanism and Machines by Ghosh and Mallick (EWP)
- 4) Theory of machines, by Dr. R.K. Bansal, Laxmi Publication
- 5) Theory of Machines by R.S. Khurmi, S.Chand and co.
- 6) Theory of Machines, by Thomas Bevan, (CBS Publishers, Delhi)

Reference Books:

- 1) Theory of Machines and Mechanisms, by John Uicker, Garden Pennock & Late. J. F. Shigley, (McGraw Hill Publications)
- 2) Theory of Machines, by W.Green
- 3) Mechanical vibrations, G.K. Grover
- 4) Mechanical Vibration Analysis, P. Srinivasan- Tata McGrawHill
- 5) Theory and Practice of mechanical vibrations, J.S. Rao K. Gupta – New Age International Publications.
- 6) Machines and Mechanisms Applied Kinematic Analysis, David H. Myszka, Pearson Education, Asia.
- 7) Design of Machinery, R. L. Norton, McGraw-Hill.
- 8) Theory of vibrations with applications, W.T. Thompson, Prentice Hall of India
- 9) Mechanical Vibrations, Schaum's outline series, McGrawHill

Shivaji University, Kolhapur.
T. Y. B. Tech (Production Engineering) –Semester V.
DESIGN OF MACHINE ELEMENTS
Course Code: PCC-PE303

Teaching Scheme:

Lectures: 3 Hrs. / Week Theory Paper(3 Hrs.)

Practical: 2 Hrs. /Week/Batch

Credits: 4

Examination Scheme:

ESE: 70 Marks

CIE: 30 Marks

Term Work: 25

Pre-requisites: Machine Drawing, Theory of Machine-I

Course Learning Objectives:

- 1) To study the different types load considerations and design aspects of various machine members.
- 2) To study the different types of joints and design.
- 3) To study the different types of Gear design

Course Outcome: At the end of this course, student will be able to

- 1) Different types load considerations and design aspects of various machine members.
- 2) Different types of joints and design.
- 3) Design the shaft, keys, spline and coupling.
- 4) Design of springs and power screw.
- 5) Different types of Gear design.

Unit-1

Introduction: Concept of machine design, general design considerations, design procedure; factor of safety for different types of loading its significance and selection ;theories of failures, Selection of engineering materials for a component considering functionality, raw material generating process, strength, cost, quantity and aesthetics, use of IS codes. (5)

Unit-2

- a) Design for static loading: Knuckle joint, turnbuckle, cotter joint, levers. (3)
- b) Design for fluctuating loads: Fatigue phenomena, concept of stress vs. number of cycles diagram and endurance limit, stress concentration and remedies, use of Goodman and Soderberg diagram in design of machine elements like shafts, springs and couplings. (5)

Unit-3

Design of shafts, keys, splines and couplings: Design of solid and hollow shafts for strength and rigidity against pure torsion, pure bending, combined bending, torsion and axial loads; design of keys and splines; design of rigid and flexible couplings. (6)

Unit-4

a) Design of pressure vessels: Classification and design of thick and thin pressure vessels and cylinders. (2)

b) Design of joints: Design of bolted, riveted, and welded joints subjected under transverse and eccentric loading, materials for bolts, initial tightening loads on bolts, effect of washer and gasket, uniform strength bolts. (3)

Unit-5

a). Design of springs: Types, applications, spring materials, stress deflection equation of helical spring, Wahl's stress factor, style of ends, design of springs for valves, clutches, buffers etc., design considerations for leaf spring. (4)

b). Design of power screw: Types, materials used, thread forms and their applications. Types of stresses induced, overhauling and self-locking properties, recirculating ball screw, design of nuts, methods of pitch error compensation for machine tools. (4)

Unit-6

a) Design of gears: a) Spur gears- materials, gear tooth loads, number of teeth, face width, strength of gear teeth, static beam strength (Lewis equation), dynamic tooth load, Wear strength (Buckingham's equation), estimation of module based on beam strength and wear strength, gear design for maximum power. (4)

b) Helical gears-No. of teeth, force analysis, beam and wear strength, effective load and design procedure. (2)

c) Construction details of gears i.e. hub, web, arms, rim, gear Lubrication, gear tooth failures and remedies. (1)

Term Work:

Any Six of the following exercises.

(Note: Standard components shall be selected from relevant I.S. codes and Design Data Hand Books for the exercises given below.)

- 1) Study of Engineering Materials, their applications and selection as per different standards used in practice.
- 2) Design, stress analysis and working drawing of components and assembly of Cotter Joint, Knuckle Joint and Turnbuckle.
- 3) Design of Coupling and Detailed Working drawings with assembly.
- 4) Design of bolted, riveted and welded joints for transverse and eccentric loading.
- 5) Design of Gear Drive involving Gears, Shafts, and Keys with working drawings.
- 6) One assignment using CAD package on any one of the exercises 2, 3, or 5 above.
- 7) Two computer programs (or use of spreadsheet) on any of the above exercise.

Reference Books:

- 1) Design of Machine Elements, V. B. Bhandari, (Tata McGraw-Hill Publishing Company Ltd.)
- 2) Elements of Machine Design, N. C. Pandya and C. S. Shaha, (Charotar Publishing House)
- 3) Mechanical Engineering design, J. E. Shigley, Mitchell, (McGraw-Hill Publishing Co. Ltd)
- 4) Machine Tool Design, N. K. Mehta, (Tata McGraw-Hill Publishing Company Ltd.)
- 5) Design of Machine Elements, D. Brovalsky (MIR Publisher)
- 6) A Text Book of Machine Design, R. S. Khurmi, (S. Chand)
- 7) Design of Machine Elements by M. F. Spotts, T. E. Shoup (PHI)
- 8) Machine Design, R. K. Jain, (Khanna Publishers.)
- 9) Engg. Design, a Materials & Processing Approach, G. Dieter, (Tata McGraw Hill Publishing Company Ltd.)
- 10) Computer Aided Analysis and Design of Machine Elements by Dukki Patti, Rao, Bhat, (New Age, Delhi)
- 11) CMTI Machine Tool Design Handbook (TMH)
- 12) Design of Machine Elements, An Integrated Approach by Robert and Norton, (Pearson)
- 13) Machine Design by Black and Adams (McGraw-Hill Publishing Company Ltd)

T. Y. B. Tech (Production Engineering) –Semester V.

METROLOGY

Course Code: PCC-PE304

Teaching Scheme:

Lectures: 3 Hrs. / Week Theory Paper(3Hrs):

Practical: 2 Hrs. /Week/Batch

Credits: 4

Examination Scheme:

ESE: 70 Marks

CIE: 30 Marks

Term Work: 25

Practical Oral Examination: 25 Marks

Pre-requisites: Machine Drawing, Workshop Practice

Course Learning Objectives: A Student should be -

- 1) Able to explain the principles of measurement and its techniques.
- 2) Able to demonstrate the design, construction and accuracy features of various instruments.
- 3) Able to acquire hands-on skills of measurement by using different instruments and gauges.

Course Outcomes: A Student should have-

- 1) Ability to describe measurement aspects.
- 2) Ability to design a measuring instrument.
- 3) Ability to maintain and service measuring instruments.
- 4) Develop the hands on skill in solving problems encountered during inspection.
- 5) Ability to use all types of measuring instruments.

Unit-1 Fundamental Principles of Metrology and Basic Measuring Instruments

Definition and scope of metrology, definition of measurement, primary, secondary, tertiary and working standards, line and end standards, advantages of optical standard precautions to minimize errors, measurement system and its characteristics, Vernier calipers, micrometers, height and depth gauges, - types, design considerations, specifications, applications, sources of errors and handling precautions, selection and general care of measuring instruments. Slip gauge box - Grades, materials, wringing, setting to sizes, precautions while use and storage

Accessories - Bench centers, surface plates, V-blocks, angle plates. (8)

Unit-2 Comparators and Advance Measuring Instruments

Need for comparators, comparison of principles, mechanical, pneumatic, optical and electrical and electronic instruments, dial indicator, bore gauges and master rings, optical profile projector, tool makers microscope, electrical and electronic comparators, differential pneumatic comparator, and applications of pneumatic gauging. (5)

Unit-3 Gauges and Gauge Design

Concept of limit gauging, Taylor's principle, various types of plug, ring and snap gauges for plain and taper dimensions, gauge design for a given dimension for workshop, inspection and general grade gauges, fixtures and gauges for measurement of pitch circle diameter, center distance between holes, positioning of holes and surfaces. (IS: 919, Part 1, 1993-ISO system for limits, fits and tolerances, is to be used for gauge design) (4)

Unit-4 Measurement of Angles and Geometric Features

Bevel protractor, clinometers, sine bar, angle dekor, angle slip gauges, measurement of taper, angle and radius with the help of simple inspection set-ups using standard pins and balls Measurement of straightness, flatness, parallelism, squareness, circularity, roundness, concentricity, symmetry, distance between axes and other geometrical features Straightedge, level beam comparator, autocollimator. (5)

Unit-5 Gear, Thread and Surface Finish Measurement

a) Measurement of Screw Threads

Basic terminology, measurement of major, minor and effective diameter, Screw thread micrometer, floating carriage diameter measuring machine, two wire and three wire method, measurement of pitch and pitch error, thread pitch gauges, limit gauges for thread measurements

b) Measurement of gears

Basic terminology, measurement of pitch, lead, run out, back lash and tooth thickness, constant chord and base tangent method, Gear tooth Vernier caliper, David Brown tangent comparator, errors in gear geometry, measurement of composite error, Parkinson gear tester

c) Measurement of surface properties

Waviness and roughness, causes of variation in surface quality, different parameters for assessment of surface roughness, methods of calculation, instruments for surface roughness measurement. (10)

Unit-6 Advances in Industrial Metrology

Types, applications, Principle of digital measurement instruments and examples, Instrument-computer interface, Co-ordinate Measuring Machines (CMM), construction, working principle and applications, Objectives, Non Contact inspection methods, equipment; contact

type inspection, Inspection robots.

(4)

Term Work:

The term work shall consist of the following.

A) All the experiments listed below-

1. Measurement of linear dimensions using vernier, micrometer and boregauge
2. Measurement of angle by using bevel protractor and sinebar
3. Dimensional measurement by using pneumatic comparator
4. Measurement of effective diameter of a screw thread by using floating carriage diameter measuring machine
5. Measurement of gear tooth thickness by Chordal thickness method.
6. a) Measurement of roundness and concentricity by using dial indicator
b) Measurement of radius by using inspection setup like rollers and pins
7. Measurement of roughness of machined surface
8. Assessment of profile of a component by using profile projector.

B) One assignment on Gauge design problem

C) One industrial visit to study inspection practices and submission of thereport

Practical Examination: Each student shall perform individually, one assigned experiment from the above list and submit the result, followed by an oral examination.

Reference Books:

1. Engineering Metrology, -K. J. Hume, McDonald London
2. Engineering Metrology, -D. M. Anthony, Oxford University Press(I)
3. The Quality Technician's Handbook, - Garry Griffith, PrenticeHall
4. Engineering Metrology, - I. C. Gupta, Dhanpat Rai Publications
5. Principles of Machine Tool Design, -Sen, Gupta, New Central BookAgency
6. Basic Machine Technology, -C. Thomas Olivo, Bobbs-Merrill Educational Publishing
7. Machine Tool Practices, -Kibbe, Neely, Meyer, White, PrenticeHall
9. Engineering Metrology, -R. K. Jain, Khanna Publishers, Delhi
8. Testing of Machine Tools, -Dr. George Schlesinger, Pergamon Press
9. Basic Rules on using Measuring Tools, -Mitutoyo Metrology Institute
10. A Text Book of Metrology, -M. Mahajan, Dhanpat Rai and Co.

T. Y. B. Tech (Production Engineering) –Semester V.

MANUFACTURING TECHNOLOGY

Course Code: PCC-PE305

Teaching Scheme:

Lectures: 3 Hrs. / Week Theory Paper(3Hrs)

Practical: 2 Hrs. /Week/Batch

Credits: 4

Examination Scheme:

ESE: 70 Marks

CIE: 30 Marks

Term Work: 25

Pre-requisites: Foundry Technology, Machine Tools and Processes

Course Learning Objectives: A Student should be -

- 1) To understand principles of rolling & forging processes.
- 2) To demonstrate the fundamental of principles of metal forming processes.
- 3) To understand principles in metal removal process.
- 4) To develop knowledge & importance of metal cutting parameters.
- 5) To study the metal cutting technology including the process, measurements, design and selection of various cutting tools and their industrial specifications.

Course Outcomes: At the end of this course, student will be able to

- 1) Understand function & application of metal forming process.
- 2) Ability to describe plastic manufacturing processes.
- 3) Apply cutting mechanics to metal machining based on cutting force & power consumption.
- 4) To Select cutting materials & tool geometries for different materials
- 5) To solve problems on Single point cutting tool & Broach tool Design

Unit-1: Rolling and Forging: Rolling process, types of rolling mills, production of seamless pipes by rolling process, rolling defects. Forging process, types of forging, forging equipment's, forging defects.

Unit-2: Extrusion, Drawing and Advance metal forming processes: Process, types, extrusion defects, wire and rod drawing process, drawing defects, Explosive forming, Electro-hydraulic forming, Electromagnetic forming.

Unit-3: Plastic Manufacturing: Thermoplastics and thermosetting plastics, injection molding, plastic extrusion, blow molding, rotational molding, thermoforming , compression molding, calendaring.

Unit-4: Theory of Metal Cutting: Speed, Feed, Depth of Cut, Orthogonal Cutting and Oblique Cutting, Geometry of single point cutting tool, Mechanism of chip formation, Chip Breaker, Strain in Chip, Shear plane angle, Cutting ratio, Force relationship, Velocity relationship, Merchant circle, Ernst Merchant theory, dynamometer Design of Single point cutting tool. (9)

Unit-5 Machinability: Concept of Machinability,

- i) Cutting force: Effect of speed, feed, depth of cut, tool materials, angles and work material on cutting forces, specific cutting force, specific power consumption.
- ii) Tool life: Flank and Crater wear, Mechanism of wear, effect of cutting parameter on tool life, Taylor's tool life equation.
- iii) Surface Roughness: : Effect of speed, feed, depth of cut, tool materials, angles and work material on surface roughness, built up edge, chatter and its elimination. (9)

Unit-6 Design of Form Tool: Design of flat form tool and circular form tool. Geometry, nomenclature, types, selection and applications of drills, reamers, milling cutters and broach. (4)

Term Work:

- 1) Machining of minimum two jobs of different materials such as C.I., Steel, Aluminium etc. and measurement of surface roughness to study the effect of parameters such as feed, tool nose radius, depth of cut on the surface roughness.
- 2) Design of form tool and broach for given components
- 3) Industrial visit to study applications of tools for different metal cutting processes.
- 4) Study of Rolling Process
- 5) Study of Forging Process
- 6) Study of extrusion Process.

Reference Books:

1. Manufacturing Processes – Begman, Amstead etc.(JohnWiley)
2. Forging and Forging Die Design - Sharan, Prasad, Saxena.
3. Rolling of Metals: Ivankove and Chaturvedi (Yantrik Publications,Mumbai)
4. Extrusion - Pearson (McGrawHill)
5. Manufacturing Technology: Foundry, Forming and Welding by P.N. Rao (TMH)
6. Plastic Technology: Theory, Design & Manufacture – William J.Patton

7. Cutting tools - P.H. Joshi - Tata McGraw Hill Publishing Co. Ltd.
8. Production Technology - HMT Handbook(TMh)
9. Metal Cutting Theory and Cutting Tool Design - Arshinov V. Mir Publication.
10. Metal cutting Theory and Practice- A. Bhattacharya, New Central Book Agency.
11. Metals Handbook, Vol. 16 Machining, A.S.M., Metals Park, Ohio.
12. Metal Cutting and Tool Design - Dr. Ranganath - Vikas Publishing House.
13. Machine Tool Engineering: K. R. Nagpal, Khanna Publication.
14. Tool Engineering handbook - ASTME, Frank Wilson (Editor) (TMh)

SUBJECT NAME: WORKSHOP PRACTICE – V

SUBJECT CODE: PCC-PE306

Teaching Scheme:

Lectures: 00Hrs. per week

Practical: 02 Hrs. per week

Credit: 01

Examination Scheme:

ESE: 00 Marks

CIE: 00 Marks

Term Work: 25 Marks

Course Objectives:

The course aims to:

- 1 Understand and perform the various machining operations.
- 2 Implement principles of metrology.
- 3 Design the sequence of various processes required to manufacture the components.

Course Outcomes: At the end of this course, student will be able to

- 1 Select the suitable machining operations and prepare process sheet to manufacture a Component and implement the same.
- 2 Control key dimensions on a component using principles of metrology and assembly
To make any one assembly / sub – assembly comprising of minimum three components in Workshop Practice V and Workshop Practice VI

Syllabus

To make any one assembly / sub – assembly comprising of minimum three components in Workshop Practice V and Workshop Practice VI

A. To prepare process sheets with working drawings of all components.

B. To manufacture the components as per the drawing requiring following operations

i) Turning, ii) Facing iii) Step turning iv) taper turning

v) knurling vi) threading vii) Drilling

C. A visit report based on the industrial visit to study the following machining processes

i) Broaching, ii) Slotting iii) Grinding iv) Milling

TERM WORK /LIST OF EXPERIMENTS/ LIST OF ASSIGNMENTS:

Assignments

Write any three assignments out of following.

1. Study and demonstration of Lathe machine.
2. Study and demonstration of grinding machine.
3. Study and demonstration of drilling machine.
4. Study of Broaching machine. (Theoretical treatment only.)

TEXT BOOKS:

1. 1. "Workshop Technology Vol. II", Raghuvanshi
2. 2. "Workshop Technology Vol. II", Hajara Choudhary, Media Promoters and Publishers, Mumbai

REFERENCE BOOKS:

3. 1. "Production Technology", P. C. Sharma, S. Chand Publication, 11th Edition.
4. 2. "Production Technology", HMT handbook
5. 3. "Workshop Practice Manual", V. Venkata Reddy, 6th edition

T. Y. B. Tech (Production Engineering) –Semester V

Open Elective I: ADDITIVE MANUFACTURING

Course Code: OEC-PE307

Teaching Scheme:

Lectures: 03 Hrs. / Week Theory Paper (3Hrs)

Practical: 00Hrs. /Week/Batch

Credits :3

Examination Scheme:

ESE: 70Marks

CIE: 30 Marks

Term Work: 25

Course Learning Objectives:

1. To know the principle methods, areas of usage, possibilities and limitations of the Additive Manufacturing technologies.
2. To be familiar with the characteristics of the different materials those are used in Additive Manufacturing.
3. To know the principles of polymerization and powder metallurgy process, extrusion-based system printing processes, sheet lamination processes, beam deposition processes, direct write technologies and Direct Digital Manufacturing.
4. To get exposed to process selection, software issues and postprocessing.

Course Outcomes: At the end of the course the student will be able to:

1. Demonstrate the knowledge of the broad range of AM processes, devices, capabilities and materials that are available.
2. Demonstrate the knowledge of the broad range of AM processes, devices, capabilities and materials that are available.
3. Understand the various software tools, processes and techniques that enable advanced/additive manufacturing.
4. Apply the concepts of additive manufacturing to design and create components that satisfy product development/prototyping requirements, using advanced/additive manufacturing devices and processes.
5. Understand characterization techniques in additive manufacturing.
6. Understand the latest trends and business opportunities in additive manufacturing.

Unit 1:

Introduction and basic principles: Need for Additive Manufacturing, Generic AM process, stereo lithography or 3d printing, rapid prototyping, the benefits of AM, distinction between AM and CNC machining, other related technologies- reverse engineering technology.

Development of Additive Manufacturing Technology: Introduction, computers, computer-aided design technology, other associated technologies, the use of layers, classification of AM processes, metal systems, hybrid systems, milestones in AM development.

Unit 2:

Additive Manufacturing Process chain: Introduction, the eight steps in additive manufacture, variations from one AM machine to another, metal systems, maintenance of equipment, materials handling issues, design for AM, and application areas.

Photo polymerization processes: Stereo lithography (SL), Materials, SL resin curing process, Micro-stereo lithography, Process Benefits and Drawbacks, Applications of Photo polymerization Processes.

Unit 3:

Powder bed fusion processes: Introduction, Selective laser Sintering (SLS), Materials, Powder fusion mechanism, SLS Metal and ceramic part creation, Electron Beam melting (EBM), Process Benefits and Drawbacks, Applications of Powder Bed Fusion Processes.

Extrusion-based systems: Fused Deposition Modelling (FDM), Principles, Materials, Plotting and path control, Bio-Extrusion, Process Benefits and Drawbacks, Applications of Extrusion-Based Processes.

Unit 4:

Printing Processes: evolution of printing as an additive manufacturing process, research achievements in printing deposition, technical challenges of printing, printing process modeling, material modification methods, three-dimensional printing, advantages of binder printing

Unit 5:

Guidelines for Process Selection, Software issues for Additive Manufacturing, Post- Processing: Support material removal, surface texture improvements, preparation for use as a pattern, property enhancements using non-thermal techniques and thermal techniques.

Unit 6:

AM Applications: Functional models, Pattern for investment and vacuum casting, Medical models, art models, Engineering analysis models, Rapid tooling, new materials development, Bi-metallic parts, Re-manufacturing. Application: Examples for Aerospace, defense, automobile, Bio-medical and general engineering industries.

Direct digital manufacturing: Align Technology, siemens and phonak, DDM drivers, manufacturing vs. prototyping, life- cycle costing, future of direct digital manufacturing.

Term Work:

- 1) Three Assignments on 3D modeling & STL File generation of industrial components.
- 2) Assignment on introduction to Additive manufacturing
- 3) Study of AM Processes along with working principles, set up, applications, advantages and limitations
- 4) Assignment on applications of Additive Manufacturing in various fields like automotive, aerospace, medical, construction etc.
- 5) Assignment on rapid tooling along with working principles, setup, applications, advantages and limitations

Text Books:

- 1) "Additive Manufacturing Technologies", I. Gibson, D.W. Rosen and B. Stucker, Springer New York

Reference Books:

- 1) "Rapid Prototyping: Principles & Applications", Chua Chee Kai, Leong Kah Fai, WorldScientific, 2003
- 2) "Rapid Prototyping: Theory & Practice", Ali K. Kamrani, EmandAbouel Nasr, Springer, 2006
- 3) "Rapid Manufacturing: The Technologies and Applications of Rapid Prototyping and Rapid Tooling", D.T. Pham, S.S. Dimov, Springer, 2001
- 4) "Rapid Prototyping: Principles and Applications in Manufacturing", Rafiq Nooran, John Wiley & Sons, 2006
- 5) "Additive Manufacturing Technology", Hari Prasad, A.V. Suresh, Cengage, 2019
- 6) "Understanding additive manufacturing: rapid prototyping, rapid tooling, rapid manufacturing", Andreas Gebhardt, Hanser Publishers, 2011

T. Y. B. Tech (Production Engineering) –Semester V

Open Elective I: HUMAN RESOURCE MANAGEMENT

Course Code: OEC-PE307

Teaching Scheme:

Scheme: Lectures: 03 Hrs. / Week Theory Paper(3Hrs)

Practical: 00 Hrs. /Week/Batch

Credits: 3

Examination

ESE: 70Marks

CIE: 30 Marks

Term Work: 25

Course Learning Objectives:

1. To enable the students to understand the HR Management and system at various levels in general and in certain specific industries or organizations.
2. To help the students focus on and analyse the issues and strategies required to select and develop manpower resources
3. To develop relevant skills necessary for application in HR related issues
4. To Enable the students to integrate the understanding of various HR concepts along with the domain concept in order to take correct business decisions

Course Outcomes:

On completion of this course, the students will be able

1. Synthesize information regarding the effectiveness of recruiting methods & selection procedures
2. Identify the various training methods and design a training program
3. Design a job description and job specification for various levels of employees.

Unit 1:

Introduction: Evolution of HRM, Objectives, Functions and Policies.

Human Resource Planning: Uses and benefits, Man Power Inventory, Man Power Forecasting, Methods of Man Power Forecasting, job Description, Job Specification

Unit 2:

Recruitment: Sources of Man power, Advertisement, Short Listing of Candidates calling Candidates for selection Process.

Selection: Selection procedure – Written Test, Group Discussion. Interview – Different methods, advantages and limitations, Psychological testing – Advantages and limitations, Induction procedure, transfers, promotion, exit interview, (Tutorial on written test, Group Discussion, Interviews)

Unit 3:

Training and Development: Identification of Training needs, Training Evaluation, Training Budget, Executive Development – Different Approaches, Non-executive development – Different methods.

Unit 4:

Performance Appraisal: Components (all round performance appraisal), Methods. Advantages and limitations of different methods, Personal Counselling based on Annual Confidential Reports

Unit 5:

Counselling and Human Resource Accounting: Characteristics, Need, Function, Types, Suggestions for personnel development, communication function, communication process, effective communication. Human resource records, Advantages of HR accounting, Various methods of accounting.

Unit 6:

Industrial Relations: Indian trade union act, standing orders act, Indian factories act

Industrial Disputes And Settlement: Indian Industrial Disputes act, Industrial disputes settlement machinery. Works committee, Board of Conciliation, Voluntary Arbitration, Compulsory arbitration, Court of inquiry, Industrial tribunal, Adjudication.

Term Work:

- 1) Projects: The students will be required to work on a couple of live projects, develop and submit report on all. One of the projects has to be presented in the class using power point presentation. The length of the presentation must not exceed 20 minutes.
- 2) Case Analysis: Working in groups/ individually, the students will be required to submit analyses of the cases reflecting on the problem, genesis of the problem, probable solutions to the problem, merits and demerits of the probable solutions, proposed solution with action plan. The analyses must be limited to five pages. Cases to be discussed are indicated in the course plan.
- 3) Assignments: Working in groups, the students will be required to develop and deliver a presentation of 20 minutes on contemporary / challenging issues worth digging deep. Suggested Topics include Learning Organizations, Knowledge Management, HR Outsourcing, Quantifying HR, Behavioral Event Interviewing (BEI), Global HR, HRIS, e-HR and GreenHR.
- 4) Classroom Activities: Working in groups/ individually, the students will be required to complete the activity and submit a report on same at the end of the class.

Text Books:

- 1) "Human Resources Management", Dr. K Ashwathappa, Tata McGrawHill, Edition
- 2) "Management of Human", CB Mamoria, Himalaya Publication, 2003

Reference Books:

- 1) "Personnel / Human resource Management", Decenzo and Robbins, PHI, 2002
- 2) "Industrial Relations", Arun Monappa, TMH
- 3) "Human Resources Management", VSP Rao
- 4) "Human Resources Management", Ravi Dharma Rao

SUBJECT NAME:

Professional Skill Development

SUBJECT CODE: PCC-PE308

Teaching Scheme:

Lectures: 00Hrs.perweek

Practical: 02Hrs.perweek

Credit: 01

Examination Scheme:

ESE: 00 Marks

CIE: 00 Marks

Term Work: 25 Marks

Pre-requisites: NA

Course Objectives:

1. Enable students to imbibe all those skills that are needed to be successful in their professional life
2. Develop behavioral competencies amongst students
3. Develop effective communication skills in business situations
4. Develop effective writing and presentation skills in business situations
5. Enhance team building and time management skills
6. Develop interpersonal skills

Course Outcomes: At the end of this course, student will be able to

1. Effectively use techniques for self-awareness and self-development to increase confidence in abilities
2. Strengthen soft skills to achieve success in professional career
3. Smoothly transit from student life to professional life
4. Create professional documents using MS office tools

Unit 1 Technical Writing and Business Communication

[02]

Informal and formal letter writing, quotations, purchase orders, enquiry letter, invitation and acceptance letter, notice of meeting, circular, agenda and minutes of meeting.

Unit 2 Report and Proposal Writing

[02]

Different types of report, structure of a report, characteristics of a good report, project report, structure of a general format proposal, importance of a proposal.

Unit 3 The e-English [02]

Writing email to an unknown person, guidelines for continuing the conversation on emails, the top ten Do's, Business emails, marketing emails.

Unit 4 Team Building and Time Management [02]

Interpersonal skills, what is needed to form smart team. Different approaches to team building. Techniques of a time management: ABC analysis, Pareto analysis.

Unit 5 Corporate Etiquettes [02]

Business dress and grooming, office etiquettes, telephone etiquettes, dining etiquettes, meeting etiquettes, travel etiquettes.

Unit 6 Working with Professional Documents [04]

Creating professional quality documents using MS Office applications.

MS Word: Create, store, organize. Font & paragraph formatting, inserting tables, smart art, page breaks.

MS Excel: Creating, editing, saving and printing spreadsheets, functions & formulas, charts & graphs, filtering data.

MS Power Point: Creating slides, applying auto layouts, adding animation, slide transitions, graphically representing data.

TERM WORK / LIST OF ASSIGNMENTS:

1. Quotation and Purchase order for the Engineering goods.
2. Agenda, notice, and minutes of a meeting.
3. One report based on the literature review or comparison.
4. One page bio data.
5. Power Point presentation based on hobby or favorite topic.

TEXT BOOKS:

1. "Soft skills for managers", Dr. T. Kalyana Chatravarthi, Dr. T. Latha Chatravarthi Biztantra.
2. "Soft skills for young managers", by Prof. M. S. Rao Wiley India Pvt. Limited.

REFERENCE BOOKS:

1. "Technical English", Dr. M. Hemamalini, Published by Wiley India Pvt.ltd.
2. "Soft skills", S. Hariharan MJP Publishers Chennai , (2010).

T. Y. B. Tech (Production Engineering) – Semester VI

INDUSTRIAL HYDRAULICS AND PNEUMATICS

Course Code:PCC-PE308

Teaching Scheme:

Lectures: 3 Hrs. / Week Theory Paper (3Hrs):

Practical: 2 Hrs. /Week/Batch

Credits: 4

Examination Scheme:

ESE: 70 Marks

CIE: 30 Marks

Term Work: 25

Practical Oral Examination: 25 Marks

Pre-requisites: Basics of Mechanical Engineering, Fluid Mechanics

Course Learning Objectives:

1. To understand and demonstrate of fluid power terms, concepts, and calculations for simple applications.
2. Able to select components for application of fluid power (Hydraulics and Pneumatics)in Industries.
3. To demonstrate the ability to use and apply hydraulic, Pneumatic and Electro hydraulic schematics to build circuits.

Course Outcomes:

1. Understand application of fluid mechanics and governing laws in hydraulic and pneumatic systems.
2. To acquaint with working principle of various components used in hydraulic and pneumatic systems.
3. Able to study of ISO symbols of fluid power systems.
4. Understand selection of different components used in hydraulic and pneumatic systems.
5. Design of hydraulic and pneumatic circuits.
6. Design industrial applications of hydraulic and pneumatic circuits.

Unit-1

Fundamental concepts of fluid & Introduction to fluid power: (3)

Classification of fluids, derivation of Pascal's law, continuity equation and Bernoulli's equation

Introduction to fluid power: (4)

Types, advantages and applications, ISO symbols for hydraulic and pneumatic systems; hydraulic fluids- functions, desirable properties, grades and selection of fluid, conditioning of fluids, study of reservoirs, strainers, filters, heat exchangers.

Unit-2

Hydraulic system elements: pumps – (4)

Types, working, characteristics and applications, power and efficiency calculations (numerical treatment expected), types of conductors and connectors, their selection, seals and packing – types, materials, applications, hydraulic actuators – linear and rotary - types, working, cushioning effect, mounting, calculation of force and velocity of piston (numerical treatment expected), system components: accumulators, intensifiers, their types, working, applications,

Control Elements: (4)

- a) Construction and working of pressure control valves – direct acting type, pilot operated, sequence, counterbalancing, unloading, pressure reducing,
- b) Direction control valves – types, construction and working, spool actuation methods, spool centre positions,
- c) Flow control valves – compensated and non-compensated types, construction and working.

Unit-3

Hydraulic circuits and their applications: (5)

Speed control circuits, regenerative, sequencing, counterbalancing, interlocking, synchronizing circuits, use of accumulator and intensifier, methodology to design hydraulic circuits. , maintenance of fluid power system, Electro -Hydro systems: concept, working and applications (descriptive treatment only)

Unit-4

Pneumatics: (3)

Basic principle, applications, comparison with hydraulic system, Pneumatic system elements: Piping, materials and pressure ratings, piping layout, calculation of pressure drop in pneumatic line; air compressors, types, selection criteria;

FRLunit- (3)

Construction and working of pneumatic cylinders and air motors- construction, working and types, calculation of force and air consumption, comparison of air, hydraulic and electric motors.

Unit-5

Pneumatic system control elements: (6)

Direction control valves- types and working, flow control valves, working of variable flow control, quick exhaust, time delay and shuttle valve. Fluidics: Concept, study of logic gates and applications.

Unit-6

Pneumatic circuits: (4)

Basic circuit, impulse operation, speed control, sequencing, time delay circuits and their applications, pneumatic clamping systems, pneumatic power tools, maintenance of pneumatic system.

Term Work:

- 1) Verification of Bernoulli's Theorem on Bernoulli's apparatus.
- 2) Study of pressure, direction and flow control valves in hydraulics and pneumatics using cut section models
- 3) Meter-in, Meter-out and Bleed-off, Sequencing, Counterbalancing, Synchronizing, Interlocking, pressure reducing circuits on hydraulic trainer.
- 4) Manual / automatic forward – reverse, sequencing, Basic logic circuits on pneumatic strainer.
- 5) Electro-Hydraulic systems- study and simple circuits.
- 6) Design of a hydraulic circuit for a given application and selection of components from commercial catalogues.
- 7) At least one industrial visit to study industrial applications of hydraulics and pneumatics with submission of the relevant report.

Reference Books:

- 1) Fluid Power with Applications by A. Esposito (Pearson)
- 2) ABCs of hydraulic Circuits by H. L. Stewart and J. M. Storer (Taraporwala)
- 3) ABCs of Pneumatic Circuits by H. L. Stewart and J. M. Storer (Taraporwala)

- 4) Industrial Hydraulics by J. J. Pipenger, Hicks (McGrawHill)
- 5) Hydraulic and Pneumatic Power for Production by H. L. Stewart (IndustrialPress)
- 6) Fluid mechanics by R.K.Bansal, Laxmi publications. NewDelhi.
- 7) Oil Hydraulic Systems by S. R. Majumdar (TMH)
- 8) Industrial Hydraulics Manual by VickersSperry
- 9) Pneumatic Systems-Principles and Maintenance by S. R. Majumdar (TMH)
- 10) Hydraulic Text Book Basic Level (Festo Controls Pvt. Ltd. Bangalore, (Part No.93281)
- 11) Pneumatic Text Book Basic Level (Festo controls Pvt. Ltd. Bangalore) (Part No.93131)
- 12) Pneumatics and Hydraulics by H. L. Stewart (Taraporwala)
- 13) HydraulicsandPneumatics,A Technician"sandEngineer"s GuidebyAndrewParr.
- 14) Fluid power engineering, M GalalRabie,(McGrawHill)

T. Y. B. Tech (Production Engineering) –Semester VI.

DESIGN OF JIGS, FIXTURE & DIES

Course Code:PCC-PE309

TeachingScheme:

Lectures: 3Hrs./Week

Practical: 2 Hrs. /Week/Batch

Credits: 4

Examination Scheme:

Theory Paper:3.5Hrs

ESE: 70 Marks, CIE: 30Marks

Term Work: 25 Marks, O. E.: 25 Marks

Pre-requisites: Machine Drawing, Metallurgy, Machine Tools and Processes, Cutting Tools, Metrology, Computer Aided Design.

Course Learning Objectives:

- 1) To understand the working principles of Jigs, fixtures and dies.
- 2) To understand the functions of Jigs, fixtures and dies.
- 3) To understand the design practices of Jigs, fixtures and dies.
- 4) To understand the locating principles of locating elements
- 5) To understand the principles of clamping devices

Course Outcomes: At the end of this course, student will be able to

- 1) Use design principles while designing jigs and fixtures
- 2) Prepare manufacturing drawings of jigs, fixture and dies
- 3) Design drilling jig and milling fixture
- 4) Design drawing die and progressive die.

Unit-1 Introduction to Jigs and Fixtures:

Necessity, applications and types, basic concept of jigs and fixtures for different manufacturing processes, dependency of jig and fixture design on operation sequence. (4)

Unit-2 Location and clamping system:

Location - Principles, Location by nesting and sighting, locating pins, pads, diamond pin, post locator, adjustable supports, Vee locators,

Clamping - Principle, types of clamps like screw clamp, strap, lever, hinge type, cam operated, toggle clamps, centralizer and equalizer clamp, multiple clamping, quick acting clamps, pneumatically operated clamps. (9)

Unit-3 Design of Jigs & fixtures:

A) Design of jigs: Principles of Jig design, types of jigs- plate, template, box, channel, sandwich, latch, turn-over, tumble jig etc., types of bushes, selection of bushes and liners, construction of Jig and fixture bodies, use of fasteners and standard parts for assembling different elements

B) Design of fixtures: Principles of fixture design, types of fixtures- gang, straddle, string milling fixture etc, selection of the suitable cutting tool and machine tool for different milling operations, design of different elements of milling fixtures like setting block, tenon, T-bolt and T-nut etc, Introduction to different fixtures like turning/lathe fixture, welding fixture, Inspection fixture Indexing device for jigs and fixtures, Concept of Modular Fixtures. (15)

Unit-4 Introduction to press tools:

Dies, punches, types of presses, types of dies, simple, compound, combination and progressive dies, press tools for operations like blanking, piercing, drawing, shaving, trimming, etc., Theory of metal cutting Miscellaneous dies like- cut off dies, trimming, shaving, bulging, rubber, lancing, slitting, horn type, side cam dies, bending, forming, curling dies etc. (theoretical treatment only) (10)

Unit-5 Design of die of progressive die for cutting operations:

Fourteen steps of die design - cutting force and blank holding force estimation, punch and die clearance, scrap strip layout, design of punches, design of dies, pilots, strippers, stock stops, finger stops, auto stops, center of pressure, selection of die set etc (8)

Unit-6 Design of drawing die:

Blank size determination, no. of draws, stage wise achievement of drawn component, stage wise component drawings, drawing radii and clearance, drawing forces, defects in drawing, (6)

Term Work:

The term work shall consist of the following.

A) Study of various elements of jigs and fixtures

B) All Design and Drawing mentioned below

- 1) Design and drawing of two drilling / reaming jigs. (Details of at least one A2 size sheet showing manufacturing drawing with tolerances, material specification and heat treatment.)
- 2) Design and drawing of two milling fixtures. (Details of at least one A2 size sheet showing manufacturing drawing with tolerances, material specification and heat treatment.)
- 3) Design and drawing of one progressive die.
- 4) Design and drawing of one drawing die.

C) Design and drafting using any CAD software for above any one Jig, fixture or die showing assembly

D) At least one industrial visit to study industrial practices related to the subject and submission of the visit report.

Text Books:

- 1) Tool Design, Donaldson, TMH
- 2) Tool Design, Pollock, Reston Pub. Co. Inc.
- 3) An Introduction to Jig & Tool Design, M.H.A. Kempster, ELBS
- 4) Fundamentals of Tool Design, Ed. Frank Wilson, ASTM, TMH
- 5) Jigs and Fixture Design Manual, Henrikson, Industrial Press, NY
- 6) A Text Book of Prod. Engineering, P. C. Sharma, S.Chand
- 7) Techniques of Press Working of Metals by Eary and Reed

Reference Books:

- 1) Handbook of Die Design- Suchy, McGrawHill
- 2) Die Design Fundamentals, J. R. Paquin, R. E. Crowley, Industrial Press Inc.
- 3) Jigs and Fixture, P. H. Joshi, Tata Mc-Graw Hill Pub.Co.
- 4) CMTI Machine Tool Design Handbook, TMH
- 5) Design Data Handbook –PSG College of Tech., Coimbatore

T. Y. B. Tech (Production Engineering) –Semester VI.
INDUSTRIAL MANAGEMENT & QUALITY MANAGEMENT
Course Code: PCC-PE310

Teaching Scheme:

Lectures: 3 Hrs. / Week Theory Paper(3 Hrs):

Practical: 2 Hrs. /Week/Batch

Credits: 4

Examination Scheme:

ESE: 70 Marks

CIE: 30Marks

Term Work: 25

Pre-requisites: Knowledge of Statistics and management is required.

Course Objectives: A Student should be -

- 1) Able to describe knowledge of functions of industrial management and an ability to identify, formulate and solve industrial management problems.
- 2) Able to know behavior at workplace and role of supervisor in industry.
- 3) Able to demonstrate the core concepts and the emerging trends in Quality Management.
- 4) Able to develop hands-on-skills on tools & techniques of Quality Management for industrial problem-solving.
- 5) To student should be able to demonstrate implementation and documentation requirements for Quality system.
- 6) To choose and demonstrate the statistical process control to describe a quality system

Course Outcomes: A Student should have-

- 1) Ability to describe management aspects.
- 2) Ability to describe functions of management.
- 3) To define quality and explain the evolution of quality
- 4) To select and explain tools and techniques for problem solving.
- 5) To select and explain management tools used for problem solving.
- 6) To choose and demonstrate the statistical process control to describe a quality system

Unit 1 Functions of Management

[08]

Definition of Management, Management environment. Planning – Need, Objectives, Strategy, Policies, Procedures, Steps in Planning, Decision making Forecasting. Organizing – Process of Organizing importance and principle of organizing, Departmentation, Organizational relationship, Authority, Responsibility, Delegation, Span of control. Staffing – Nature, Purpose, Scope, Human resource management, Policies, Recruitment procedure training and development, Appraisal methods. Leading – Communication process, Barriers, Remedies, Motivation, Importance, Theories, Herzberg's theory, Maslow's theory, McGregor's theory, Leadership style. Controlling – Process, requirement for control Management, Accountability.

Unit 2 Marketing Management, Materials Management

[06]

- i. Marketing Management: Marketing Concepts – Objective – Types of markets – Market Segmentation, Market strategy – 4 A's of market, Market Research, Salesmanship, Advertising.
- ii. Materials Management: Definition, Scope, advantages of materials management, functions of materials management, Purchase Objectives, 5-R Principles of purchasing, Functions of Purchase department, Purchasing cycle, Purchase policy and procedure, Evaluation of Purchase Performance.

Unit 3 Production, Quality management & industrial psychology

[06]

Primary and secondary objectives, functions, organization, types and procedure of purchasing. Basic concepts of psychology, industrial psychology, scope, causation of behaviour, individual differences, differences in psychological characteristics – intelligence, interest, physique, learning ability, perception, concept of psychological test. Quality Management : Principles and Practice Definition, basic approach, gurus of TQM, TQM Framework, awareness, defining quality, historical review, obstacles, benefits of TQM. 3Hrs. Leadership Definition, characteristics of quality leaders, leadership concept, the Deming philosophy, role of TQM leaders, core values, concepts and framework, strategic, decision making,

Unit 4 Quality Management Tools

[06]

Why-Why analysis, nominal group technique, affinity diagram, interrelationship digraph, tree diagram, prioritization matrices, process decision program chart, activity network diagram.

Unit 5 Statistical Process Control

[06]

Pareto diagram, process flow diagram, cause and- effect diagram, check sheets, histograms, statistical fundamentals, Control charts, state of control, out of control process, control charts for variables, control charts for attributes, scatter diagrams, case studies.

Unit 6 Quality Improvement

[06]

ISO 9001:2015 & IATF, ISO 14001, ISO 45001: 2018, ISO 22000:2018 Only clauses introduction
Single parameter experiments, Orthogonal array, Analysis of Variance ANOVA (one - way),
Process capability, Correlation analysis and Linear regression models.

Tutorial work:

1. Assignment of problems on Quality lossfunction.
2. Case study using any quality controltool.
3. Industrial case study on Variables control charts (X-bar &Rcharts).
4. Industrial case study on Attributes control charts(P-chart).
5. Process capability study. ISO 9001:2015 & IATF, ISO 14001, ISO 45001: 2018, ISO 22000:2018 & one pagereport.
6. Single parameter experiment and statistical inferences using one-wayANOVA.

Shivaji University, Kolhapur.

T. Y. B. Tech (Production Engineering) –Semester VI.

Course Code:PCC-PE311

5. MACHINE TOOLDESIGN

TeachingScheme:

Lectures: 3 Hrs. / Week Theory Paper(3 Hrs):

Practical: 2 Hrs. /Week/Batch

Credits: 4

Examination Scheme:

ESE: 70 Marks

CIE: 30Marks

Term Work:25

Pre-requisites: Workshop Practice, Theory of Machine-I

Course Objectives:

1. To understand core concepts of Machine Tool & Product Design.
2. To understand the basic approach for designing machine tool components and implement the appropriate method.
3. To compute the power requirements of various machine tools.
4. To learn to design quality based manufacturing system.
5. To learn to design a product using innovative concepts of Product Design

Course Outcomes: At the end of this course the student will be able to -

1. Apply the concepts of machine tool design.
2. Select the correct design approach & design the important components of machine tools.
3. Calculate the forces acting and the subsequent power requirements of machine tools.
4. Specifically design the critical components comprising a manufacturing system & emphasize on the quality of the system.
5. Analyses the various phases of the design cycle sequentially and envision the concept of “Scratch to Market” w. r. t a product.

Unit-1

Introduction to Machine & Machine Tool

Types, capabilities, features of construction like working & auxiliary motions in machine tools, parameters defining the working motions of a machine tool, machine tool drives, general requirements of machine tool design, methodology for machine tools design considering quality, quantity of production and economic aspects.

Principle of Machine Tool Design from the point of view of quality, production rate, strength, rigidity, assembly, ergonomics, aesthetics, maintenance and interchangeability (6)

Unit-2

a) Analysis of forces

Forces affecting machine tool elements, determination of motive power for different operating conditions, use of handbooks. (2)

b) Design considerations and selection of standard components

Drive systems with pulleys, belts, ropes and chains; selection of oil seals, gaskets and electric motors from standard catalogues. (3)

Unit-3

Kinematics of Machine Tools

Classification of various driving systems, basic considerations in the design of drives, aims of speed & feed regulation, stepped regulation of speeds, design of gear box, laws of stepped regulations, selection of range ratio, G.P. ratio, break up of speed steps, structural diagram, Ray diagram & speed chart, design of feed box, machine tool drives using multiple speed motors, general recommendations for developing gearing diagram, determining the number of teeth on gears, step less regulation of speed and feed rates. (8)

Unit-4

a) Design of Spindle & Spindle Support

Functions of spindle unit and requirements, materials and construction, spindle ends, spindle support, design calculations, mounting arrangements of spindle bearings, spindle bearing lubrication. (3)

b) Selection of Machine Tool Bearing

Journal, rolling and hydrostatic bearings, basic principles, assembly, mounting and maintenance, procedure for selection of bearings from manufacturer's catalogue based on load and life considerations (4)

Unit-5

a) Design of Machine Tool Structures

Functions of machine tool structures and their requirements, design criteria, materials, static and dynamic stiffness, profiles of machine tool structures, basic design procedure, design of beds, columns, housings, rams etc, Causes of vibrations in machine tools and methods of elimination. (4)

b) Design of Guideways

Functions and types of guide ways, materials, design criteria and calculations of slide-ways based on wear and accuracy, design of anti-friction guide ways, hydrostatic and hydrodynamic lubrication of guide ways. (4)

Unit-6

a) Product Design and Development

Product design by evolution and innovation, essential factors of product design, analysis of the product, product characteristics, 3 S's – simplification, standardization and specialization, basic design considerations, functional design practice, product value, design for safety, reliability and environmental conditions, ergonomic design of controls and displays, introduction to rapid prototyping. (3)

b) Intellectual Property Rights (IPR)

Trademarks, copyrights, patents and its procedures. (2)

Term Work:

- 1) Design of a gear box for speed and feed drive, design of shafts and gears with assembly drawing.
- 2) 2) Selection of bearings from manufacturer's catalogue
- 3) Study of different machine tools from the point of view of types of machine parts.
- 4) Exercise on design of machine tools from ergonomic aspects suitable in India.
- 5) One case study on product design and development. (Report to be submitted)
- 6) Assignment on IPR with case study.

Text Books

- 1) Basic and Applied Thermodynamics by P.K. Nag (TMH).
- 2) Thermal Engineering by R.K. Rajput (Laxmi Publications).
- 3) Thermal Engineering by P.L. Ballaney (Khanna Publishers).
- 4) Thermal Engineering by B.K. Sarkar (TMH).
- 5) Thermal Engineering by Kodandaraman (New Age International Publication).

Reference Books

- 1) Machine tool design by N.K. Mehta (TMH).
- 2) Principles of machine tools by Gopal Chandra Sen and Amitabh Bhattacharya (New Central Book Agency).

- 3) Machine Tool Design Handbook, C.M.T.I, Bangalore,(TMH).
- 4) Design Data Handbook, PSG College of Tech.,Coimbatore.
- 5) Design of Machine Tool, Dr. S. K. Basu (OxfordIBH)
- 6) Design of Machine Elements, Dobrovalsky.
- 7) Design of Machine Elements, V. B. Bhandari, Tata McGraw-Hill Publishing CompanyLtd.
- 8) Elements of Machine Design, N. C. Pandyaand C. S. Shaha, Charotkar Publishing House
- 9) Design Data Handbook, K. Mahadevan and Balveera Reddy, C.B.S Publishers &Distributors.
- 10) Engineering Design, a Materials and Processing Approach, G. Dieter, Tata McGraw- Hill Publishing CompanyLtd.
- 11) Product Design and Manufacturing, (3/e), A. K. Chitale and R. C.Gupta, Prentice Hall of India Pvt.Ltd.
- 12) Catalogues of Bearing Manufacturers, example, S.K.F, NACHI, TIMKEN, NRBetc.

T. Y. B. Tech (Production Engineering) –Semester VI.
CAM LABORATORY AND CNC WORKSHOP PRACTICE
Course Code: PCC-PE312

Teaching Scheme:

Practical: 4 Hrs. /Week/Batch

Credits:2

Examination Scheme:

Term Work: 50

Pre-requisites: Computer Aided Solid Modeling, Advanced machine tools &
Processes

Course Learning Objectives: - A Student should be

- 1) Able to study the Computer Aided Manufacturing Fundamentals and Procedure
- 2) Able to study advanced features of Computer Aided Manufacturing practices followed in the industry
- 3) Able to prepare Part Programs

Course Outcomes: The student should have

- 1) Ability to demonstrate the knowledge of advanced features of Computer Aided Manufacturing practices followed in the industry.
- 2) Ability to use the techniques, skills, and computer aided tools necessary for advance engineering practice

Contents & Term Work:

- 1) Selection of cutting parameters including tool specifications for various operations on CNC machines—Turning Center and Machining Center. (2)
- 2) Study of the features of the controller of the CNC machines (e.g. FANUC, SINUMERIC, MAZAK etc.) including Tool offsets, Wear Compensation etc. (2)
- 3) CNC Part Programming - Detailed Manual part programming on Turning Center and machining centers using G & M codes for various operations on CNC machines—

a) CNC Part Programming for Turning Center: Stock Removal Cycles: Facing and turning, Finishing Cycles, Drilling cycles.

b) CNC Part Programming for Machining Center: Canned Cycles, Pattern Repeat cycles, Sub programming and sub routines, Rotation of Coordinate System, Polar coordinate system. (12)

4) Generating and simulating CNC part programs from the CAD models (at least two exercises each). Preparing a suitable CAD model for a part to be turned and generating the CNC part program to machine the same on a CNC Turning Center from the given form of raw material using suitable CAM software and a post processor. Simulation of the above programs using any suitable CNC simulation software. (8)

5) Preparing a suitable CAD model for a part to be machined and generating the CNC part program to machine the same on a CNC machining center (vertical/horizontal) from the given form of raw material using suitable CAM software and a post processor. (2 dimensional machining like turning, facing, threading, drilling, face/slot milling etc, and rectangular, circular pockets, cavities) (12)

6) Generating a simple part program using CAM software and executing it on a CNC machine (at least one exercise each) on CNC lathe and CNC machining center. (12)

IMPORTANT NOTES:

1) During CNC practice each student has to perform the machining of at least two parts of the assembly undertaken during the Workshop Practice-V of B.E. (Prod) Sem-5 on CNC Turning Center or CNC machining center.

2) Each student shall perform the CNC programming for a separate component as referred in point 6 above.

3) The external practical examination shall include execution of one assigned job & its operation on CNC Turning Center or CNC machining center followed by an oral examination.

4) The print outs of CAM & CNC programs and relevant reports of the abovementioned laboratory work shall be included in the journal.

Reference Books:

- 1) Jon Stenerson and Kelly Curran—Computer Numerical Control, Prentice-Hall India Pvt. Ltd. New Delhi, 2008

- 5) Bedworth, Wolfe and Henderson-Computer aided design and manufacturing, McGraw Hill.
- 6) A. Ghosh and Malik—Manufacturing Science Affiliated East West Press Pvt. Ltd
- 7) Tilak Raj—CNC Technology and Programming, Dhanpat Rai Publication Company.
- 8) Robert Quesada, T. Jeyapoovan —Computer Numerical Control: Machining and Turning Centers, Pearson Education.
- 9) Programming Manuals of various CNC machines (Lathes and Machining Centers) e.g. FANUC, SINUMERIC, MAZAK etc.
- 10) Catalogs of Commercial Tool Manufacturers e.g. SANDVIK, KENNAMETAL, ISCAR, TAEGUTECH, MITSUBISHI etc.
- 11) Manuals of CNC Simulation and CAM Software.
- 12) Reference Manuals of controllers like FANUC, Siemens, Mazak, etc.

T. Y. B. Tech (Production Engineering) –Semester VI

Open Elective II: ENTREPRENEURSHIP DEVELOPMENT

Course Code: OEC-PE314

Teaching Scheme:

Scheme: Lectures: 03 Hrs. / Week Theory Paper(3Hrs)

Practical: 00 Hrs. /Week/Batch

Credits: 3

Examination

ESE: 70Marks

CIE: 30 Marks

Term Work: 25

Course Learning Objective:

To familiarize students with fundamentals of Entrepreneurship and to encourage them to become successful entrepreneurs.

Course Outcomes:

The students shall demonstrate the knowledge of Entrepreneurship and shall be motivated to become successful entrepreneurs.

Unit 1:

Entrepreneurship: Definition of Entrepreneur and Entrepreneurship, entrepreneurial process, Entrepreneurship and economic development, job creation, Indian scene.

Entrepreneurial Motivation: Self-disclosure, personality effectiveness, risk taking, entrepreneurial competencies, case studies. (2)

Unit 2:

Small Scale Units: Concept and definition, role of S.S.I. in Indian economy, government policies and facilities.

Planning Small Scale Business: Business opportunity identification, idea generation, ideas from market place, market assessment, demand estimation.

Small Business Management: Techniques of marketing, materials, production, manpower and financial management, crisis management, working capital management, fixed capital assessment, cash flow analysis, ROI, techniques of decision making.

Demand Analysis: Demand Theory and Analysis – Individual demand and Market demand – Factors determining demand – Elasticity of demand – Price Elasticity - Income Elasticity – Cross Elasticity – Elasticity and Decision – making (Analytical problems). Demand estimation: Linear regression, Interpreting coefficients, Interpreting regression fit, Omitted variables, Log linear estimation. (7)

Unit 3:

Managerial Economics: Introduction to Economics, Kinds of Economic Decisions, Significance and applicability of Managerial Economics in decision making, Role and responsibilities of Managerial Economics, Economic principles relevant to managerial decision making, Opportunity cost, Production

possibility curve, Concept of increments and Margin, Discounting principle. (Numerical Problems)

Business Accounting: Study of Balance sheets, Profit and Loss statements. Need, format of Trading and Profit and Loss A/c., Items to be recorded on the Debit and Credit Side of Trading and Profit and Loss A/c, Preparation of Trading and Profit and Loss A/c. Need, format of Balance Sheet, identification of Accounts to be written on liabilities and Assets side, Preparation of Balance sheet. (Analytical Problems) (7)

Unit 4:

Government Support Organizations:

The detailed study of the government support system for the entrepreneurship development.

- a) Central Government
- b) State government
- c) Financial support organizations
- d) Government schemes and procedures (3)

Unit 5:

Business plan preparation: Meaning of business plan, project parameters, information sources of economical and technical knowhow, selection of location, identification of raw material, suppliers, plants/machinery, process, manpower and other inputs such as power, water etc. Preparation of project report including the following aspects. Analytical calculations for decision making at each of the following shall be included.-

- 1) Selection of product.
- 2) Process and plant and machinery selection.
- 3) Site selection and Plant Layout planning.
- 4) Financial viability analysis.
- 5) Marketing and distribution of goods.
- 6) Study of probable reasons of failure. (6)

Unit 6:

Statutory Requirements: Factories Act 1948, Industrial disputes Act 1947, Indian Contract Act, Indian sales and Goods Act, Indian Partnership Act, Central Excise, Sales tax, Income Tax Act, Value Added Tax (VAT).

Business Aspects: Business ethics, export environment, procedure and documentation, venture capital financing, intellectual property act, patents, GATT. (3)

Term Work:

Minimum Six exercises / case studies based on the topics below. Assignment No. 2, 4 & 6 shall include the analytical problems.

1. Study of Government policies and procedures to start SSI.
2. Study of Calculations of working capital requirements.
3. Study of resources and procedures to get financial assistance.
4. Study of tax procedures.
5. Study of export procedures.
6. Study & Preparation of project feasibility report for the manufacturing of a product.

Reference Books:

1. Developing New Entrepreneurs - Entrepreneurship Development Institute of India, Ahmedabad.

2. Handbook of New Entrepreneurs
3. Management of Small Scale Industry - Vasant Desai (Himalaya Publication)
4. Entrepreneurship Playing to Win- Gordon Betty (Taraporwala & Co.) Motivating Economic Achievement- David C. McClelland, David G. Winter
5. Industrial Maharashtra- Facts, Figures and Opportunities (M.I.D.C. Mumbai).
6. Project Planning & Entrepreneurship Development - T. R. Banga

T. Y. B. Tech (Production Engineering) –Semester VI

Open Elective II: SUPPLY CHAIN MANAGEMENT

Course Code: OEC-PE314

Teaching Scheme:

Scheme: Lectures: 02 Hrs. / Week Theory Paper(3 Hrs)

Practical: 02 Hrs. /Week/Batch

Credits: 3

Examination

ESE: 70Marks

CIE: 30 Marks

Term Work: 25

Course Objective:

To study the fundamentals and applications of various techniques of Supply Chain Management in practice.

Course Outcome:

The students shall have the knowledge of the fundamentals and applications of various techniques of Supply Chain Management in practice.

Unit-1:

Introduction to Supply Chain Management: Building a Strategic framework to Analyze Supply Chains: Understanding the supply chain, supply chain performance, Supply chain drivers & obstacles. (3)

Unit-2:

Planning Demand & Supply in Supply Chains: Demand forecasting in supply chain, aggregate planning in supply chain, planning demand & supply in supply chains. (4)

Unit-3:

Planning & Managing Inventories in a Supply in Supply chains: Managing economies of scale in a supply chain: cycle inventory, managing uncertainty in supply chain: safety inventory, determining optimal level of product availability. (4)

Unit-4:

Design consideration in Supply Chain: Transportation, Network Design, & Information technology in a supply chain: Transportation in supply chain, facility decisions: network design in a supply chain, information technology in a supply chain. (5)

Unit-5:

Supply Chain Coordination Logistics in SCM: Coordinating in a Supply Chain & role of E-Business: Coordination in a supply chain, E- business & the supply chain.

Logistics In Supply Chain Management: Introduction, Strategy, Transportation Selection, Trade-off, Models for Transportation and Distribution, Third Party Logistics,, Overview of Indian Infrastructure for Transportation. (5)

Unit-6:

Financial consideration in Supply Chain: Financial factors Influencing Supply Chain Decisions: Financial evaluation of supply chain decisions, the impact of financial factors on supply chain decisions, evaluating supply chain decisions using decision trees, (4)

Term Work:

Any six assignments based on the above syllabus (One from each unit)

Text Books:

1. Sunil Chopra & Peter Meindl, — Supply Chain Management: Strategy, Planning, & Operation, Addison Wesley Longman.
2. A.J. Vanweela, — Purchasing & Supply Chain Management || Cengage Learning (Nov 2004) ISBN 1844800245

RESEARCH SEMINAR

Course Code: PCC-PE314

Teaching and Examination Scheme:

Practical: 2 Hrs. /Week/Batch

Credits : 1

Term Work:25

Course Learning Objectives: A Student should be -

- 1) Able to explain different research techniques
- 2) Able to complete literature review
- 3) Able to write systematic report.
- 4) Able to prepare and deliver presentation before a group of peers and faculty

Course Outcomes: A Student should have-

- 1) Ability to conduct minor research
- 2) Ability to complete literature review
- 3) Ability to compile systematic report
- 4) Ability to prepare and deliver presentation

Content and Term Work

Before the end of Semester VI each student will deliver a research seminar on a subject related to production engineering. Seminar topic shall be latest and ahead of the scope of curriculum. Preferably topic shall be related to tentative project work (to be finalized in semester VII). Research seminar guide shall help the students in selection of topic.

Student shall systematically prepare and submit at least 30 page report of research seminar work in duplicate, typed on A4 size sheet in a prescribed format and bound. The report shall be verified by seminar guide considering latest research in area selected by student. Major content of the report shall have literature review.

The student shall present the research seminar before the group of peers & faculty. The performance of the student shall be judged by seminar guide along with one more teaching staff on the basis of the contents, literature review, research problem, research objectives, research methodology, result and conclusion.

T. Y. B. Tech (Production Engineering) –Semester VI.

MINI PROJECT

Course Code: PCC-PE315

Teaching Scheme:

Practical: 2Hrs. /Week/ Batch

Examination Scheme:

Term Work: 25 Marks

Credits: 2

Practical Oral Examination: 25 Marks

Course Learning Objectives: A Student should be -

Able to encourage hands-on working skills by fabricating simple working mechanisms illustrating technical principles.

Term Work:

A group of maximum four students will design and fabricate one simple working mechanism involving mechanical or electromechanical components / sensors. (Mechanisms already proven may also be taken up.) For example : Gear trains, shaft bearing assembly, mechanisms with lower and higher pairs, water level indicator, Screw jack etc.

Assessment scheme: Fabrication of model and Presentation: 15marks

Report (10 – 15 pages, typed on A4 sheets): 10 marks

Total: 25 marks
