Shivaji University, Kolhapur

The Head/Director /Co-ordinator
All Concerned Department (Science)
Shivaji University, Kolhapur.

Subject: Regarding revised syllabi of M.Sc. & MCA Part-I (Sem I & II) degree programme under the Faculty of Science and Technology as per NEP-2020 (2.0)

Sir/Madam,

With reference to the subject mentioned above, I am directed to inform you that the university authorities have accepted and granted approval to the syllabi, nature of question paper of M.Sc. & MCA Part-I (Sem I & II) degree programme under the Faculty of Science and Technology as per NEP-2020 (2.0).

M.Sc. & MCA Part-I (Sem. I & II) as per NEP-2020 (2.0)	
1.	M.C.A. Part I
2.	M. Sc. Computer Science Part I

This syllabus, nature of question and equivalence shall be implemented from the academic year 2026-2027 onwards. A soft copy containing the syllabus is attached herewith and it is also available on university website www.unishivaji.ac.in>Syllabus>Syllabus as per NEP2020.

The question papers on the pre-revised syllabi of above-mentioned course will be set for the examinations to be held in October /November 2026 & March/April 2027. These chances are available for repeater students, if any.

You are, therefore, requested to bring this to the notice of all students and teachers concerned.

Thanking you,

Yours faithfully,

Dy Registrar

Encl: as above

for information and necessary action

Copy to:

1	Dean, Faculty of Science & Technology	6	Appointment Section A & B
2	Director, Board of Examinations and Evaluation	7	I.T.Cell /Computer Centre
3	Chairman, Respective Board of Studies	8	Eligibility Section
4	B.Sc.-M.Sc. Exam Section	9	Affiliation Section (T.1) (T.2)
5	Internal Quality Assurance Cell (IQAC Cell)	10	P.G. Seminar Section
		11	Distance and Online Education

SHIVAJI UNIVERSITY, KOLHAPUR

NAAC A++ Grade with CGPA 3.52

Multiple Entry and Multiple Exit Option (NEP-2020)

Syllabus for

Master of Computer Application

(Under Faculty of Science and Technology)

PART-I SEMESTER - I & II

(Revised syllabus to be implemented from Academic year 2026-27)

1. Preamble

The basic objective of the education in Masters Programme as Computer Application (MCA) is to provide to the country a steady stream of the necessary knowledge, skills and foundation for acquiring a wide range of rewarding careers into the rapidly expanding world of the Information Technology. The program addresses the job requirements in many upcoming domains such as cyber security, mobile computing, cloud computing, IoT, Robotics, Data Science and the one involving assortment of hardware and software. Career opportunities also exist in areas such as management software and hardware sales, technical writing, training others on current IT skills, consulting, software development and technical support.

2. Duration

The MCA programme will be a full-time TWO years i.e. 4 semesters. Pattern of examination will be Semester System.

3. Eligibility for Admission

- Eligibility: Passed minimum three year duration Bachelor's Degree awarded by HEI recognized by University Grants Commission or Association of Indian Universities in any discipline with at least 50% marks in aggregate or equivalent (at least 45% in case of candidates of backward class categories belonging to Maharashtra state only. 45% is also applicable to differently abled students)
- Reservation of Seats As per rules of Government of Maharashtra.

4. Medium of Instruction

The medium of Instruction will be English only.

5. Programme Structure

M.C.A. (Science) Part – I (Level-6.0)

Programme Structure

Structure in Accordance with National Education Policy - 2020

With Multiple Entry and Multiple Exit Options

M.C.A. (Science) Part – I (Level-6.0)

#Evaluation scheme for Research Project shall be decided by concerned BOS										
• Requirement for Exit after Level 6.5: Students can exit after completion of Level 6.5 with Master of Computer Application										

6. Program Educational Objectives (PEO)

1. To equip students with a sound foundation to design and develop solutions in mathematical, scientific and business applications.
2. To educate students on societal, environmental & legal issues to meet the requirements of the global world.
3. To inculcate in students professional & ethical values, leadership quality & teamwork skills to sustain in a global environment.

7. Program Outcomes

Upon successful completion of the MCA, the student should have met the following

Student Learning Outcomes:

1. Nurture knowledgeable and skilled human resources, employable in Information and Communication Technology (ICT) and Information Technology Enable Services (ITES).
2. Ability to apply knowledge of Mathematical Foundations in computing problems.
3. Impart knowledge required for planning, designing and building complex Application Software Systems as well as provide support to automated systems or application.
4. Produce entrepreneurs who can develop customized software solutions for small to large Enterprises.
5. Ability to apply modern IT tools and computational knowledge for developing solutions in context to societal, environmental and sustainable development with ethical and professional responsibility.
6. Ability to function as an effective communicator and team member through essential skills in multidisciplinary projects.

8. Program Specific Outcome (PSO)

1. Ability to function as an effective communicator and team member through essential skills in multidisciplinary projects.
2. Enable the students to apply the computing and soft skills acquired in the MCA program and developing innovative applications for the betterment of the society.
3. Provide exposure to techniques that would enable the students to design, implement and evaluate IT solutions.
4. To enable the students to meet the challenges of research and development in computer science and applications
5. Identify, formulate, and solve complex computing problems using critical thinking, analytical reasoning, and technical skills.

Course Codes

M.C.A. Semester-I		
Course Code	Major Mandatory	
MMT-101	Advanced Java Programming (4 credits)	MSU0325MML929G1
MMT-102	Relational Database Management System(4 credits)	MSU0325MML929G2
MMPR-103	Practical-I(4 credits)	MSU0325MMP929G1
MMT-104	Cyber Security (2 credits)	MSU0325MML929G3
MMT-105	Advanced Data Structures (4 credits)	MSU0325RML929G
Major Elective		
MET-106	Computer Networks (4 credits)	MSU0325MEL929G1
MET-107	Computer Architecture (4 credits)	MSU0325MEL929G2
M.C.A. Semester-II		
Major Mandatory		
MMT-201	Front End Development (4 credits)	MSU0325MML929H1
MMT-202	Artificial Intelligence (4 credits)	MSU0325MML929H2
MMPR-203	Practical-II (4 credits)	MSU0325MMP929H1
MMT-204	Data Engineering (2)	MSU0325MML929H3
MMPR-205	Project(4credits)	MSU0325OJ929H
Major Elective		
MET-206	Network Security (4 credits)	MSU0325MEL929H1
MET-207	Software Engineering (4 credits)	MSU0325MEL929H2
M.C.A. Semester-III		
Major Mandatory		
MMT-301	Mobile Application Development (4 credits)	MSU0325MML929I1
MMT-302	Back End Development (4 credits)	MSU0325MML929I2
MMPR-303	Practical-III (4 credits)	MSU0325MMP929I1
MMT-304	Advanced Python Programming (2 credits)	MSU0325MML929I3
MMT-305	Machine learning (4 credits)	MSU0325RP929I
Major Elective		
MET-305	Cloud Computing(4credits)	MSU0325MEL929I1
MET-306	Data Science(4credits)	MSU0325MEL929I2

MMT-401	Industrial Project/Research Project(18 credits)	MSU0325MML929J1
Major Elective		
MET-402	NPTEL, SWAYAM Course (4 credits)	MSU0325MEL929J1
MET-403	NPTEL, SWAYAM Course (4 credits)	MSU0325MEL929J2

Master of Computer Application (MCA) Part I Semester I

Course Code: MMT-101

Title of Course: Advanced Java Programming

Internal Marks: 40

External Marks: 60

Theory: 04 hours/week

Course Outcomes: Upon successful completion of this course, the student will be able to:

1. To become familiar with the features of Java Language.
2. To become comfortable with concepts such as Classes, Objects, Inheritance, Polymorphism and Interfaces.
3. Develop Java client/server applications.
4. Understand distributed applications using RMI.
5. Understand Enterprise Java Beans.
6. Understand Spring and Spring Boot Framework.

UNIT I

(15 Hours)

Features of Java: Enhancing code expressiveness, Flexible constructor bodies, Structured concurrency, Updated class file API, Generational Z Garbage Collector (ZGC). Java Magic: Byte Code, OOP in Java , Objects and classes ,Java Database Connectivity: JDBC overview , Architecture , Steps to create JDBC Application, Types of JDBC Drivers-Type1, Type2, Type3, Type4,Database connection statements, Resultsets, transaction, Metadata and Aggregate functions , callable statements. Connection pooling.

UNIT II

(15 Hours)

Java Servlets: Servlet vs CGI, Servlet life cycle , servlet basics , Generic servlet, HttpServlet, The Servlets API, request server side –Cookies , session tracking , databases and non-HTML content , request dispatching , shared attributes, resource abstraction. RMI: Introduction & Architecture of RMI, Stubs & skeleton, Java RMI classes and interfaces ,Writing simple RMI application , Parameter passing in remote methods (marshalling and unmarshalling) Java Beans: Java Beans Introduction, design pattern, Beans persistence & introspection, writing simple bean.

UNIT -III

(15 Hours)

Enterprise Java Beans (EJB): Types of Enterprise Java Beans- Session Bean, Message Driven Bean, Entity Bean, Advantages and Disadvantages of Enterprise Java Beans.JSP(Java Server Pages: Introduction to JSP, Use of JSP, JSP Architecture, JSP tags, Implicit and Explicit objects, Request forward, Request –time include ,use of Beans in JSP and their scopes. JSF(Java Server Faces):Introduction of JSF, components of JSF, Benefits of JSF

UNIT IV

(15 Hours)

Hibernate framework application, Introduction Working on Hibernate framework, Features of Hibernate ORM, its advantage and disadvantage, Struts framework Architecture and details, Struts frameworks Components. Overview of the Spring Framework, Spring MVC Architecture, Bean Life Cycle in Java Spring: Bean Life Cycle Phases, Benefits of using Spring with Hibernate.

2. Java 2 Complete Reference - (Tata McGraw Hill)
3. Spring and Hibernate, Santosh Kumar K. Mc.Graw Hill Education
4. Developing Java Servlets James Goodwill, Techmedia Pub.
5. Java 2 Black Book –(DreamTech)

Master of Computer Application (MCA) Part I Semester I

Course Code: MMT-102

Title of Course: Relational Database Management System

Internal Marks: 40

External Marks: 60

Theory: 04 hours/week

Course Outcomes: Upon successful completion of this course, the student will be able to:

1. Learn and practice data modelling using the entity-relationship and developing database designs.
2. Understand the use of Structured Query Language (SQL) and learn SQL syntax.
3. Apply normalization techniques to normalize the database
4. Understand the needs of database processing and learn techniques for controlling the consequences of concurrent data access.
5. Provide overview of transaction management, database recovery and security.
6. Understanding the concepts of NO-SQL database

UNIT I

(15 Hours)

Basics of DBMS: Database Concept, Characteristics and architecture of DBMS, Database users, 3-tier architecture of DBMS-its advantages over 2-tier, Introduction of Parallel, Distributed Databases, Mobile databases and Cloud databases. Data independence. Physical data organization, Indexing-introduction and types of indexing.

UNIT II

(15 Hours)

Introduction to RDBMS:-Entity introduction, characteristics, Comparison between DBMS, RDBMS, Generalization and Aggregation Normalization- Functional dependency, types of normalization(1NF,2NF,3NF,BCNF),Data constraint- primary key, foreign key, unique key, null, not null, default key etc. **Relational Algebra Concepts;** introduction, Unary Relational Operations: SELECT and PROJECT; Relational Algebra Operations from Set Theory; Binary Relational Operations: JOIN and DIVISION; Additional Relational Operations; Examples of Queries in Relational Algebra;

UNIT III

(15 Hours)

SQL: Introduction to SQL, Features of SQL, Basic data types, SQL statements/commands, Set operations in SQL, order by and group by clause, like between, in, like, create index , view and join command Nested queries, GRANT and REVOKE, Commit, Rollback, Save point. Join concept: Simple, Equi, non-equi, Self, Outer join. View. **Introduction to PL /SQL:** Introduction, Difference between SQL AND PL/SQL, Block definition structure and Data types, Block Functions, cursor, trigger, procedures, exception handling. **No SQL Database** - Introduction, Need& Advantages ,Types of No SQL Database , No SQL database vs RDBMS

UNIT IV

(15 Hours)

Concurrency Control and Transaction Management: Transaction processing **Concurrency** - Concept of transaction processing, ACID properties, States of transaction, Serializability, Concurrency control, schemes, Locking techniques, Timestamp based protocols, Granularity of data items, Deadlocks. Database recovery and Backup

8. NoSQL Distilled: A Brief Guide to the Emerging World of Polyglot Persistence Martin Fowler

Master of Computer Application (MCA) Part I Semester I
Course Code: MMPR-103
Title of Course: Practical-I

Course Outcomes: Upon successful completion of this course, the student will be able to:

1. To become familiar with programming environment.
2. To implement linear data structures.
3. Able to create tables and generate queries
4. Apply data structures in real life problems.

Practical's will be based on MMT-101 and MMT-102

Master of Computer Application (MCA) Part I Semester I

Course Code: MMT-104

Title of Course: Cyber Security

Internal Marks: 20

External Marks: 30

Theory: 02 hours/week

Course Outcomes:

- 1) Realize the need for Cyber Security
- 2) Understand the vulnerabilities in the Network and Computer System
- 3) Understand mobile forensics
- 4) Understand cryptography and cyber security safeguards.
- 5) Understand cyber law and cyber crime.
- 6) Understand social media forensics.

UNIT I

(15 Hours)

Introduction to Cyber Security: Overview of Cyber Security, Cyber Security Dark Web, Cyber Threats:-malware types- Adware, Rootkit, Backdoor, Logic Bomb, Botnet, Polymorphic, Armored, Threat hunting, Cyber threat kill chain, Authentication, SSO- Single Sign On, Definition Wireshark, Identifying and Investigating Various Network Attacks using Wireshark, Passive attacks: eavesdropping Active attacks: Phishing, Sniffing, spoofing, Denial of service attack, Brute-Force attack, Dictionary attack, Rainbow attack, Pass-the-hash attack, Hackers, Crackers Authentication, Biometrics, Footprinting, Security operation centre(SOC), Types of SOC, SIEM tool, DHCP Server(Dynamic host configuration protocol), DORA- Discover, Offer, Request, Acknowledgement.

UNIT II

(15 Hours)

System hardening, Dumpster Diving, Kerberos, Ethical Hacking, Introduction to Cyber law: objective of cyber law, different sections in cyber law, Introduction to Mobile Forensics – Mobile Phone Basics, cellular connected mobile device, Inside Mobile devices, data acquisition procedures for cell phones and mobile devices. Cell Phone Crime, Social media forensics: Types of social networking platforms, social media crimes: hacking, photo morphing, offer & shopping scams, Dating scams, Cyberbullying, Link Baiting. Evidence Collection in Social Media Forensics: Evidence Identification, Collection, Examination. Deep Packet Inspection & Traffic Analysis. Introduction Digital arrest, Protection from digital arrest.

4. Cryptography and Network Security: Principles and Practice by William Stallings
5. Cyber Warfare: Techniques, Tactics and Tools for Security Practitioners 2nd Edition

Master of Computer Application (MCA) Part I Semester I

Course Code: MMT-105

Title of Course: Advanced Data Structures

Internal Marks: 40

External Marks: 60

Theory: 04 hours/week

Course Outcomes: Upon successful completion of this course, the student will be able to:

1. Analyze the asymptotic performance of algorithms.
2. Compare algorithms based on time & space complexity.
3. To learn how data structure concepts are useful in problem solving.
4. Understanding concepts of linear and non linear data structure
5. To implement different ways of data structures such as stacks, linked lists and trees
6. Understand different algorithm design approaches.

UNIT I

(15 Hours)

Algorithm Analysis: Introduction to algorithms, analyzing and designing algorithms, Growth functions, asymptotic notations. Divide and conquer: Binary search, Quick Sort, Merge sort, solving recurrences: Substitution method, recursion tree method, master method.

UNIT- II

(15 Hours)

Data Structures: Trees- Binary tree, binary search tree, operations on binary search tree, AVL tree, Red-Black Trees, B-trees. Graphs: Representations of graph, Traversing Graphs, Breadth-first search, Depth-First Search, topological sort.

UNIT III

(15 Hours)

Greedy Algorithm: General Characteristics of greedy algorithms, Problem solving using Greedy Algorithm - Activity selection problem, Minimum Spanning trees (Kruskal's algorithm, Prim's algorithm), Shortest paths(Dijkstra's algorithm), The Knapsack Problem, Job Scheduling Problem, Huffman code.

UNIT IV

(15 Hours)

Backtracking: Introduction, N Queen Problem, Graph Coloring, Hamiltonian Cycles
Branch and Bound: Introduction, 0/1 Knapsack, Travelling Salesman problem, Dynamic programming: Introduction, Tabulation, memorization, Optimal Substructure Property in Dynamic Programming, NP- Hard and NP- Complete problems: Introduction to Non deterministic, NP-Hard and NP Complete classes.

Master of Computer Application (MCA) Part I Semester I

Course Code: MET-106

Title of Course: Computer Networks

Internal Marks: 40

External Marks: 60

Theory: 04 hours/week

Course Outcomes: Upon successful completion of this course, the student will be able to:

1. Analyze the basics of data communications and network architecture.
2. Analyze functions of each layer of a computer network.
3. Evaluate essential features of specific protocols in the common protocol suite.
4. Analyze the methodology and the rationale behind addressing, routing, and congestion control.
5. Understand various multiplexing and switching methods used in networks.
6. Compare and contrast symmetric and asymmetric encryption systems and their vulnerability to attack, and explain the characteristics of hybrid systems.
7. Identify some of the factors driving the need for network security

UNIT I

(15 Hours)

Data communication-analog and digital signal transmission, Data transmission-serial and parallel transmission, communication and transmission modes (synchronous, asynchronous), error control(forward, backward) error detection(parity, block sum check, CRC), transmission media (twisted pair, coaxial cable, optical fibers), unguided transmission media(radio waves, microwaves, infrared), classification of computer network- geographical spread (LAN,WAN, MAN), topology-(bus, star, ring, mesh, tree), ownership (private, public, VAN), switching circuit, packet, message and routing, multiplexing-FDM,TDM, concentrator, components of computer networks-files server, workstation, network interface UNIT, transmission media, hub, repeater, bridge, router, gateway, mode. Case study-Prepare/ present report on network components used in any selected organization/Institute/Company.

UNIT II

(15 Hours)

Data Link Layer: The Medium Access Sub Layer: Channel allocations problem, multiple access protocols, Error detection and control code- Error Control -Hamming Code and CRC Flow Control -Stop and Wait protocol, sliding window protocol, Random Access Protocols - ALOHA – pure and slotted. Network Layer: Store-and-forward packet switching, Services Provided to the Transport Layer, Implementation of Connectionless and Connection Oriented Service, concept of routing, optimality principle, routing algorithms-shortest path, distance vector, link state, hierarchical, broadcast, multicasting. Congestion control & congestion control algorithm.

UNIT III

(15 Hours)

Transport Layer- Introduction, transport service primitives, multiplexing, UDP, TCP. Application Layer-Domain name system (DNS), Telnet, File transfer protocol (FTP), Simple mail transport protocol (SMTP), Hyper text transfer protocol (HTTP), Network file system (NFS). VPNs, Tunneling and Overlay Networks: Virtual Private Networks (VPNs), Multiprotocol Label Switching (MPLS), Overlay Networks – VoIP and Multimedia Networking: Overview of IP Telephony.

UNIT IV

(15 Hours)

Network Security- Introduction, concept of cryptography, authentication protocols, firewall,

virtual private networks (VPN), wireless security, email security, web security- SSL. Case Study –Implementation of LAN, Configuration of various connecting devices.

Master of Computer Application (MCA) Part I Semester I

Course Code: MET-107

Title of Course: Computer Architecture

Internal Marks: 40

External Marks: 60

Theory: 04 hours/week

Course Outcomes: Upon successful completion of this course, the student will be able to:

1. Understand the basic structure, function, and characteristics of computer systems, including instruction sets, CPU architecture, and system buses.
2. Explain the operations of arithmetic and logic UNITS, and evaluate performance using techniques like pipelining and parallelism.
3. Analyze the concepts of memory hierarchy, including cache, main memory, and virtual memory, and their impact on system performance.
4. Compare various types of I/O architectures and data transfer methods such as programmed I/O, interrupt-driven I/O, and DMA.
5. Illustrate control UNIT design principles using hardwired and microprogrammed control methods.
6. Apply the concepts of RISC and CISC architectures and analyze how modern architectures improve computational efficiency.

UNIT I

(15 Hours)

Basic Computer Organization and Design: Instruction codes, computer registers, computer instructions, timing and control, instruction cycle, memory-reference instructions, input-output and interrupt, complete computer descriptions, design of basic computer, design of accumulator logic.

UNIT II

(15 Hours)

Central Processing UNIT: Introduction, General register organization, stack organization, instruction format, address modes, data transfer and manipulation, program control, reduced instruction set computer(RISC), Pipeline and vector processing: parallel processing, pipelining, arithmetic pipeline, instruction pipeline, RISC pipeline, vector processing, array processors.

UNIT III

(15 Hours)

Input-Output organization: Peripheral devices, input-output interface, asynchronous data transfer, modes of data transfer, priority interrupt, DMA, input-output processor, serial communications.

UNIT IV

(15 Hours)

Memory organization: memory hierarchy, main memory, auxiliary memory, associative memory, cache memory, virtual memory, memory management hardware, Multiprocessors: Characteristics of multiprocessors, interconnections structures.

Master of Computer Application (MCA) Part I Semester II

Course Code: MMT-201

Title of Course: Front End Development

Internal Marks: 40

External Marks: 60

Theory: 04 hours/week

Course Outcomes: Upon successful completion of this course, the student will be able to:

1. understand the basics of web design
2. gain proficiency in HTML and CSS
3. understand the importance CSS
4. utilize the JavaScript with websites

UNIT I

(15 Hours)

Introduction to web design principles, overview of web development technologies and tools, understanding the role of HTML, CSS, and JavaScript, HTML basics, HTML elements, Attributes, heading, paragraphs, Styles, Formatting, Quotations, colors, links, images, table, list tags, Iframe, File paths, HTML layouts, Introduction to CSS syntax and selectors, applying styles to HTML elements, managing layouts using CSS

UNIT II

(15 Hours)

Overview of JavaScript and its role in web development, setting up the development environment, Writing and executing JavaScript code, Declaring and assigning variables, working with numbers, strings, booleans, and arrays, Type coercion and type conversion, Conditional statements, Switch statements, Loops, Break and continue statements, Element Access in Javascripts, Event and event handling, dialog boxes, Defining and invoking functions, working with arrays, Introduction to objects and properties, Object-oriented programming concepts

UNIT III

(15 Hours)

Introduction to Nodejs, Architecture of Nodejs Application, Advantages of Node JS, Synchronous and Asynchronous Programming, Call back Function in nodejs, Promises in Nodejs, Mongodb with Nodejs, Design the Schema in Nodejs, Design the Rest API's, GET, POST, PUT, DELETE, JSON web Token Authentication in nodejs, Create the Auth APP in nodejs

UNIT IV

(15 Hours)

NodeJS Modules, Functions, Buffer, Module, Module Types, Core Modules, Local Modules, Module.Exports, NPM, Installing Packages Locally, Adding dependency in package.json, installing packages globally, updating packages, Fs.read File, Writing a File, Writing a file asynchronously, Opening a file, Deleting a file, Other IO Operations, When to use Event Emitters, Binding Functions to Events, Event Requests, Event Listening

Master of Computer Application (MCA) Part I Semester II
Course Code: MMT-202
Title of Course: Artificial Intelligence

Internal Marks: 40 External Marks: 60 Theory: 04 hours/week

Course Outcomes: Upon successful completion of this course, the student will be able to:

1. Understand working of Artificial Neural Networks.
2. Derive solutions for problems with uncertainty using Fuzzy theory.
3. To develop a good understanding of Natural Language Processing
4. Apply Genetic Operations on Binary Strings, and Perform various operations of genetic algorithms
5. Discuss the concepts of an Expert system.

UNIT I (15 Hours)

Artificial Neural Networks: Introduction, Basic Concepts of Artificial Neural Networks, Model of an Artificial Neuron, Deterministic Model of Neuron, Stochastic Model of Neuron , Activation Functions, Network Architectures: Single-Layer Feedforward Networks, Multi-Layer Feedforward Networks, Recurrent Networks , Introduction to deep learning and deep neural network.

UNIT-II (15 Hours)

Introduction to **Fuzzy Set**, Properties of Fuzzy sets, Operations on Fuzzy sets, fuzzy membership function, Features of Membership Functions, Defuzzification, Fuzzy Inference System (FIS): Functional Blocks of FIS, Working of FIS, Methods of FIS.

UNIT III (15 Hours)

Genetic Algorithm: Genetic Algorithm (GA), Genetic Representations, (Encoding) Initialization and Selection, Different Operators of GA, Analysis of Selection Operations, the Hypothesis of Building Blocks, Schema Theorem and Convergence of Genetic Algorithm, Introduction to Expert System.

UNIT IV (15 Hours)

Natural Language Processing: Introduction, Phases of NLP, advantages, disadvantages, applications. Introduction to **Expert Systems**, Architecture of expert systems, Representation and organization of knowledge, Basics characteristics, and types of problems handled by expert systems.

Master of Computer Application (MCA) Part I Semester II

Course Code: MMPR-203

Title of Course: Practical-II

Internal Marks: 40

External Marks: 60

Practical: 08 hours/week

Course Outcomes: Upon successful completion of this course, the student will be able to:

1. To understand and implement Java programming environment.
2. Develop Java client/server applications.
3. Develop ASP.NET application
4. Utilize SQL Server with ASP.NET

Practical's will be based on MMT-201 and MMT-204

Master of Computer Application (MCA) Part I Semester II

Course Code: MMT-204

Title of Course: Data Engineering

Internal Marks: 20 External Marks: 30 Theory: 02 hours/week

Course Outcomes: Upon successful completion of this course, the student will be able to:

1. Understand basic data storage systems (SQL/NoSQL) and their use cases.
2. Design simple database schemas and perform basic CRUD operations.
3. Explain data pipeline concepts and ETL processes.
4. Recognize cloud storage services and their role in modern data engineering.

UNIT I – Data Storage Systems

(15 Hours)

Data Storage Fundamentals: Role of data storage in analytics, types of data storage systems, understanding structured vs unstructured data. Relational Databases (SQL): Tables, primary/foreign keys, basic normalization, simple SELECT/INSERT/UPDATE/DELETE queries, indexing for performance. NoSQL Databases: Document stores (MongoDB), key-value stores (Redis), when to use SQL vs NoSQL.

UNIT II – Data Pipelines & Cloud Storage (15 Hours)

Data Pipelines Basics: ETL process (Extract, Transform, Load), data flow from source to destination, batch vs real-time processing. Data Warehousing: Purpose of data warehouses, OLTP vs OLAP, simple star schema concept. Cloud Storage Services: AWS S3 (object storage), Google BigQuery (warehouse), Azure Blob Storage, basic cloud storage patterns.

Master of Computer Application (MCA) Part I Semester II

Course Code: MMPR-205

Title of Course: Project

Internal Marks: 40

External Marks: 60

Practical: 08 hours/week

Course Outcomes: Upon successful completion of this course, the student will be able to:

1. Gain industrial experience
2. Learn office ethics
3. Learn to work in team
4. Identify the industry problems
5. Implement recent technologies

Student is supposed to do the project with discussion with guide as per industry norms and requirements.

Master of Computer Application (MCA) Part I Semester II

Course Code: MET-206

Title of Course: Network Security

Internal Marks: 40

External Marks: 60

Theory: 04 hours/week

Course Outcomes: Upon successful completion of this course, the student will be able to:

1. Understand the fundamental principles of access control models and techniques, authentication and secure system design.
2. Understand the basics of cryptography and encryption systems.
3. Understand principles and practice of different encryption techniques.
4. Identify and mitigate different network security systems.
5. Identify some of the factors driving the need for network security.
6. Identify and classify particular examples of attacks.
7. Able to compare and contrast symmetric and asymmetric encryption systems and their vulnerability to attack, and explain the characteristics of hybrid systems.

UNIT I

(15 Hours)

Introduction of Network Security: Introduction, need of network security, web security, Security attacks-active attacks, passive attacks, intrusion detection system, firewall, concept of cryptography, OSI security architecture Classical encryption techniques: substitution techniques, transposition techniques, steganography- Foundations of modern cryptography: perfect security – information theory product cryptosystem – cryptanalysis.

UNIT II

(15 Hours)

Symmetric Key Cryptography: Mathematics Of Symmetric Key Cryptography: Algebraic structures – Modular arithmetic-Euclid's algorithm- Congruence and matrices -Groups, Rings, Fields- Finite fields- Symmetric Key Ciphers: DES – Block cipher Principles of DES – Strength of DES – Differential and linear cryptanalysis – Block cipher design principles – Block cipher mode of operation Evaluation criteria for AES – Advanced Encryption Standard – RC4 – Key distribution.

UNIT III

(15 Hours)

Public Key Cryptography: Mathematics Of Symmetric Key Cryptography: Primes – Primality Testing –Factorization Euler's totient function, ASYMMETRIC KEY CIPHERS: RSA cryptosystem – Key distribution – Key management – Diffie Hellman key exchange - ElGamal cryptosystem – Elliptic curve arithmetic-Elliptic curve cryptography.

UNIT IV

(15 Hours)

Message Authentication and Integrity Authentication requirement – Authentication function – MAC – Hash function – Security of hash function and MAC – SHA – Digital signature and authentication protocols – DSS- Entity Authentication: Biometrics, Passwords, Challenge Response protocols- Authentication applications – Kerberos, X.509

Master of Computer Application (MCA)Part I Semester II

Course Code: MET-207

Title of Course: Software Engineering

Internal Marks: 40

External Marks: 60

Theory: 04 hours/week

Course Outcomes:

1. Students will get foundation of software engineering, various process models and can apply the new models in development process.
2. Students will have effective communication and interaction skills for requirement engineering tasks.
3. Students can implement good coding practices and testing strategies thoroughly using testing tools.
4. Students will understand the need of lifelong learning and adapt to new software engineering concepts.
5. Distinguish between different types of testing (UNIT, integration, system), apply black-box and white-box techniques, and use testing tools to ensure software quality.
6. Classify types of maintenance, apply software estimation techniques, manage software configuration, and perform risk analysis.

UNIT I

(15 Hours)

Introduction to Software Engineering: Software definition, characteristics of software, software application domains, unique nature of web applications, seven principles of software engineering. Software development process models: Waterfall model, Prototyping model, Spiral model, Concurrent development models. Agile software development: Twelve principles of agility, Extreme Programming (XP), Scrum process flow, selection of appropriate software process models. Software Project Management: Responsibilities of a Software Project Manager, project planning, project scheduling, and risk management.

UNIT II

(15 Hours)

Requirements Engineering and Design Concepts: Seven tasks of requirements engineering, eliciting requirements, types of requirements, fundamental problems in defining requirements, Software Requirements Specification (SRS) and its standard template. Translating the requirements model into the design model. Software design concepts: abstraction, software architecture, design patterns, separation of concerns, modularity, information hiding, functional independence—cohesion and coupling, refinement, aspects, and refactoring.

UNIT III

(15 Hours)

Coding and Testing: Coding and code review, five components of coding, good coding practices. Software testing fundamentals: testing concepts, unit testing, black-box testing, white-box testing, program analysis tools. Integration testing and system testing. Testing of Web Applications: Web application testing strategy and testing process, content testing, user interface testing, navigation tests,

configuration testing, security testing, and performance testing. Study of a software testing tool.

UNIT IV

(15 Hours)

Need for maintenance, categories of maintenance: preventive, corrective and perfective maintenance cost of maintenance, software reengineering, reverse engineering. Software configuration management activities, change control process, software version control, an overview of CASE tools. Estimation of various parameters such as cost, efforts, schedule/ duration, resource allocation models, software risk analysis and management.

Scheme of Teaching

1. Each contact session for teaching or practical should be of 60 minutes each.
2. 60 lectures should be conducted for each course of 4 credits and 30 lectures for 2 credits.
3. One Practical Batch should be of 30 students.
4. Practical evaluation should be conducted before the commencement of University examination

10. Examination Pattern

Theory:

- **For 4 credit course-** University examinations: 60 marks, Internal evaluation: 40 marks
 - Two tests should be conducted of MCQ type questions. Each test will be of 10 marks
 - Assignments/Seminar/Activities carries 20 marks
- **For 2 credit course-** University examinations: 30 marks, Internal evaluation: 20 marks
 - One test should be conducted of MCQ type questions of 10 marks.
 - Assignments/ Seminar carries 10 marks
- The internal marks will be communicated to the University at the end of each semester, but before the semester end examinations. These marks will be considered for the declaration of the results.

Practical:

Practical evaluation will be through university appointed panels of one external and one internal examiner.

Project:

- **For 4 credit course-** University examinations: 60 marks, Internal evaluation: 40 marks
 - Project viva by university appointed external and internal examiners.
 - Internal evaluation will be carried out by internal guide.

Project Work (18 credits):

1. Project work can be carried out as industrial training of four months in the Industry or in the Institute as Research project with prior permission of the Institute.
2. Project viva-voce by the University panel will be conducted at the end of semester.

3. The project report should be prepared in a format prescribed by the University, which also specifies the contents and methods of presentation.
4. Project work may be done individually or in groups in case of bigger projects.
5. The project work carry 150 marks for internal assessment and 300 marks for External viva. The external viva shall be conducted by a panel of external and internal examiners.

OR

The student shall be allowed to formulate a proposal for startup and the same shall be rated equivalent to project. A detailed problem statement showing innovation along with marketability, business plan and cash flow shall be part of the evaluation criteria

11. Nature of Question Paper and Scheme of Marking

Theory:

- 1) There will be Seven (7) questions of 12 Marks and out of which Four (4) to be attempted from question no 2 to 7.
- 2) Question No.1 is compulsory and is of multiple choice questions. There will be 6 multiple choice question each carries 2 marks
- 3) Question No.2 to Question No. 6 should consist 2 sub question each carries 6 marks
- 4) Question No. 7 should be short note types consisting of 4 sub questions out of which 2 needs to be attempted each carries 6 marks.

Practical:

- 1) Duration of Practical Examination: 2.30 Hrs
- 2) Nature of Question paper: There will be three questions out of which any two questions to be attempted and each question carries 30 Marks.
- 3) The final practical examination will be conducted by the university appointed examiners both internal as well as external at the end of semester for each lab course and marks will be submitted to the university by the panel. The pattern of final Practical Examination will be as follows;

1	Coding and Execution of Program	60 Marks
2	Viva-voce	20 Marks
3	Journal	20 Marks
4	Total	100 Marks

The practical examination will be conducted semester wise in order to maintain the relevance of the respective theory course with laboratory course.

Standard of Passing:

Internal as well as external examination will be held at the end of semester. The candidate must score 40% marks in each head of internal as well as external Examination.

Backlog

Student should not have more than 6 backlogs for 2nd year admission

12. Equivalence of courses**M. C. A. Part I (Semester I and II)**

* Two more chances be given to the repeater student.
