Shivaji University, Kolhapur

**Subject:** Regarding revised syllabi of B.Sc. Part-I (Sem I & II ) degree programme under the Faculty of Science and Technology as per NEP-2020 (2.0)

**Sir/Madam,**

With reference to the subject mentioned above, I am directed to inform you that the university authorities have accepted and granted approval to the syllabi (nature of question paper etc.) of B.Sc. Part-I (Sem I & II) degree programme under the Faculty of Science and Technology as per National Education Policy 2020 (NEP 2020).

| <b>B.Sc. Part-I (Sem. I &amp; II ) as per NEP-2020 (2.0)</b> |                         |
|--------------------------------------------------------------|-------------------------|
| 1.                                                           | Data Science            |
| 2.                                                           | Artificial Intelligence |

This syllabus, nature of question and equivalence shall be implemented from the academic year 2026-2027 onwards. A soft copy containing the syllabus is attached herewith and it is also available on university website [www.unishivaji.ac.in](http://www.unishivaji.ac.in)>Syllabus>Syllabus as per NEP2020.

The question papers on the pre-revised syllabi of above-mentioned course will be set for the examinations to be held in October /November 2026 & March/April 2027. These chances are available for repeater students, if any.

You are, therefore, requested to bring this to the notice of all students and teachers concerned.

Thanking you,

**Yours faithfully,**

*[Signature]*  
Dy Registrar

## B.Sc. Computer Science (Entire)

(Under Faculty of Science and Technology)

### Program Outcomes (PO):

Upon successful completion of the B.Sc. Data Science, the student should have met the following Outcomes:

PO1. Fundamental Knowledge: Demonstrate strong understanding of core concepts in Data Science, Computer Science, Mathematics, and Statistics.

PO2. Programming & Tools Proficiency: Develop programs and analytical solutions using Python, SQL/MySQL, R (optional), spreadsheets, and visualization tools.

PO3. Data Handling & Engineering Skills: Collect, clean, transform, store, and manage structured and unstructured data using appropriate data engineering techniques.

PO4. Statistical & Analytical Thinking: Apply statistical methods, probability, and exploratory data analysis to interpret data and draw meaningful insights.

PO5. Machine Learning & AI Basics: Build and evaluate basic machine learning models for prediction, classification, and pattern recognition tasks.

PO6. Problem Solving & Critical Thinking: Analyze real-world problems and design data-driven solutions using logical and computational thinking.

PO7. Visualization & Communication: Create effective data visualizations and communicate insights through reports, dashboards, and presentations for technical and non-technical audiences.

PO8. Ethics, Security & Social Responsibility: Demonstrate awareness of data ethics, privacy, cybersecurity, and the social impact of data-driven decisions.

PO9. Teamwork & Project Management: Work effectively as an individual and as a team member in multidisciplinary environments; manage projects with professional responsibility.

PO10. Lifelong Learning & Career Readiness: Adapt to emerging tools and technologies in Data Science, AI & Analytics; pursue higher studies, research, or professional careers.

**Program Specific Outcomes (PSO):**

After successful completion of the B.Sc. Data Science program, graduates will be able to:

PSO1. Data Analysis & Visualization: Apply data analysis techniques and create meaningful visualizations using tools like Python (Pandas, Matplotlib / Seaborn), Excel, and BI tools to support decision-making.

PSO2. Database & Data Engineering Skills: Design, implement, and manage databases using SQL/MySQL, perform ETL processes, and handle large datasets using basic data engineering concepts.

PSO3. Statistical Modeling for Data Science: Use probability and statistics to analyze datasets, test hypotheses, and interpret results for real-world problem solving.

PSO4. Machine Learning Applications: Build, train, and evaluate basic machine learning models for classification, regression, and clustering using appropriate libraries.

PSO5. Programming for Data-Driven Solutions: Develop end-to-end data science solutions using Python programming, including data preprocessing, model development, and result interpretation.

PSO6. Domain-Based Data Applications: Apply data science techniques in domains such as business analytics, healthcare, agriculture, finance, and social data.

PSO7. Ethical & Responsible Use of Data: Follow ethical practices in data collection, privacy, security, and responsible AI while working with real-world datasets.

PSO8. Industry & Research Readiness: Demonstrate readiness for entry-level data roles, internships, research projects, higher studies (M.Sc./M.Tech./MBA Analytics), and competitive exams.

## **1. Introduction**

B.Sc. Data Science is a three year undergraduate degree program.

- a) The course helps students learn how to work with data in a practical way.
- b) Students learn programming, mainly Python and SQL, for data handling.
- c) The program includes basic mathematics and statistics needed for data analysis.
- d) Students learn how to collect, clean, and organize data from different sources.
- e) The course introduces machine learning and artificial intelligence concepts.
- f) Job opportunities:
  - i. Data Analyst: Students can work as data analysts and study data to support business decisions.
  - ii. Junior Data Scientist: Graduates can assist senior data scientists in building models and analyzing data.
  - iii. Business Analyst: Students can help companies understand business problems using data.
  - iv. Data Engineer Trainee: Graduates can support data pipelines, data cleaning, and data storage work.
  - v. Machine Learning Intern: Students can work on basic machine learning tasks under guidance.
  - vi. SQL and Database Executive: Students can manage databases and write queries for reports and analysis.
  - vii. Research Assistant: Students can assist in data collection and analysis in colleges and research centers.
  - viii. Higher Studies and Competitive Exams: Graduates can go for M.Sc. Data Science, M.Sc. Computer Science, MBA Analytics, or prepare for government and private sector exams.

## **2. Medium of Instruction:**

The medium of instruction will be English only

## **3. Admission Procedure**

To be eligible for admission to the B. Sc. Data Science a candidate must have passed

- HSC (10+2) from science stream OR
- Three Year Diploma Course (after SSC i.e. 10<sup>th</sup> Standard), of Board of Technical Education conducted by Government of Maharashtra or its equivalent

## **4. Course Structure:**

Lectures and Practical should be conducted as per the scheme of lectures and practical's indicated in the course structure.

## **5. Teaching and Practical Scheme**

- a) Contact session for teaching 60 minutes each.
- b) One Practical Batch should be of 20 students.
- c) Practical evaluation should be conducted after the commencement of university examination.

## **6. Assessment**

1. The final practical examination will be conducted by the university appointed examiners internal as well as external at the end of semester for each lab course and marks will be submitted to the university by the panel.
2. The practical examination will be conducted semester wise in order to maintain the relevance of the respective theory course with laboratory course.
3. The final examinations shall be conducted at the end of the semester.
4. Nature of question paper: Nature of question paper is as follows for University end semester examination.

## **B. Sc. PROGRAMME**

### **RULES FOR 60:40 EVALUATION PATTERN**

To be implemented from June 2025

#### **Nature of question paper and scheme of marking:**

a) *Theory (Semester exam) for each Theory paper: Maximum marks – 30*

#### **Modality of Assessment**

Students appearing for the B.Sc. will be evaluated as per the 60:40 scheme where in the term end exam will be of 30 marks each paper while 20 marks will be through internal evaluation for each paper.

#### **A. Theory Examination**

- ✓ Equal weightage shall be given to all units of the theory paper
- ✓ Total number of questions – 03
- ✓ Question one will carry-10 Marks,
- ✓ Question No. 1 will be of an objective type. 10 objectives will carry-10 Marks.
- ✓ Question No. 2 will be descriptive one question to be attempted out of two and will carry 10 Marks)
- ✓ Question No. 3 will be short answer type. Two questions are to be attempted out of three questions and will carry 10 Marks, 05 Marks each)
- ✓ **Nature of questions** - Multiple choice, Descriptive and Short answer type.
- ✓ All these questions will be answered in the same answer book.

#### **Semester End Theory Assessment 30 marks**

- The duration of this exam will be of 1 and half Hrs (90 minutes)
- For each unit there will be at least one question
- All questions shall be compulsory with internal choice within the questions

B. Internal Assessment 40%

| Level                        | Semester   | Activities Per Semester             | 4 credits | 2 credits |
|------------------------------|------------|-------------------------------------|-----------|-----------|
| <b>4.5<br/>(First year)</b>  | I & II     | 1 Home Assignment                   | 10 marks  | 5 marks   |
|                              |            | 2 Class Assignment (Tutorial type)  | 10 marks  | 5 marks   |
|                              |            | 3 Quiz                              | 10 marks  | 5 marks   |
|                              |            | 4 Unit Test *                       | 10 marks  | 5 marks   |
| <b>5.0<br/>(Second Year)</b> | III & IV   | 1 Oral Examination                  | 10 marks  | 5 marks   |
|                              |            | 2 Group Discussion                  | 10 marks  | 5 marks   |
|                              |            | 3 Seminar                           | 10 marks  | 5 marks   |
|                              |            | 4 Unit Test*                        | 10 marks  | 5 marks   |
| <b>5.5<br/>(Third Year)</b>  | V & VI     | 1 Case Study / Problem solving      | 10 marks  | 5 marks   |
|                              |            | 2 Field Work / Seminar              | 10 marks  | 5 marks   |
|                              |            | 3 Book Review / Poster Presentation | 10 marks  | 5 marks   |
|                              |            | 4 Unit Test*                        | 10 marks  | 5 marks   |
| <b>6.0<br/>(Fourth Year)</b> | VII & VIII | 1 Seminar                           | 10 marks  | 5 marks   |
|                              |            | 2 Case Study/ Problem Solving       | 10 marks  | 5 marks   |
|                              |            | 3 Book Review / Poster Presentation | 10 marks  | 5 marks   |
|                              |            | 4 Unit Test*                        | 10 marks  | 5 marks   |

Note:

1. For two credit course, unit test of 10 marks shall be conducted and it is converted into 5 marks.
2. For four credit course, unit test of 10 marks shall be conducted.
3. Book Review (Any relevant Reference Book)

## PRACTICAL EXAMINATION

- There will be semester wise practical examination to be conducted at the end of each semester. The question paper along with marking scheme and skeleton / Question paper will be given by respective BOS before practical examination.
- Total marks -50 for each semester -I and II (will be evaluated by two internal examiners.)
- Total-50 Marks for each semester-III and IV (Major, Minor, VSC and CEP courses will be evaluated by one internal examiner and one external examiner. OE, SEC, CC courses will be evaluated by two internal examiners.)
- Total-50 Marks (2 credit course) for each semester-V and VI (will be evaluated by two external examiners.)
- Total-100 Marks (4 credit course) for each semester-V and VI (will be evaluated by two external examiners)
- External examiners are provided by University. Internal examiners are from respective college fulltime regular faculty. If fulltime regular faculty is not available in college, then principal of the college shall invite internal examiner from fulltime regular faculty appointed in nearby college.

## **6. Standard of Passing:**

1. Minimum 12 marks in each subject. There shall be separate passing for theory (semester end exam and Internal) and practical also.
2. Admission to B.Sc. Data Science Part II is allowed even if the student fails in all the subjects of part I
3. Admission to B.Sc. Data Science Part III is allowed only if student is passed on all the subjects of B.Sc. Data Science Part I

## **7. Board of Paper Setters /Examiners:**

For each Semester end examination there will be a board of Paper setters and examiners for every course. While appointing paper setter /examiners, care should be taken to see that there is at least one person specialized in each unit of the course.

### **a. Credit system implementation:**

As per the University norms

### **b. Clarification of Syllabus:**

The syllabus committee should meet at least once in a year to study and clarify any difficulties from the Institutes.

### **c. Eligibility of Faculty:**

M.Sc. (Computer Science) or MCA (from any faculty) with at least B+ or equivalent

### **d. Revision of Syllabus:**

As the computer technology experience rapid rate of obsolescence of knowledge, revision of the syllabus should be considered every two/three years.

### **e. Fees Structure:**

As approved by the Shivaji University fee fixation committee.

### **f. Intake Capacity: 40**

### **g. Award of Class:**

Grading: Shivaji University has introduced grading system as follows:

**B.Sc. Computer Science (Entire) Part I Semester I & II**  
**Multiple Entry and Multiple Exit Option**  
**(NEP-2020) 2.0**  
**Syllabus to be implemented from Academic Year 2024-25**

**Table 1: Conversion of Marks out of 100 to grade point**

| <b>Sr. No.</b> | <b>Marks Range out of 100</b> | <b>Grade point</b> | <b>Letter grade</b> |
|----------------|-------------------------------|--------------------|---------------------|
| 1              | 80 – 100                      | 10                 | O: Outstanding      |
| 2              | 70 – 79                       | 9                  | A+: Excellent       |
| 3              | 60 – 69                       | 8                  | A: Very Good        |
| 4              | 55 – 59                       | 7                  | B+: Good            |
| 5              | 50 – 54                       | 6                  | B: Above Average    |
| 6              | 45 – 49                       | 5                  | C: Average          |
| 7              | 40 – 44                       | 4                  | P: Pass             |
| 8              | 0 – 39                        | 0                  | F: Fail             |
| 9              | Absent                        | 0                  | Ab: Absent          |

**Table 2: Conversion of Marks out of 50 to grade point**

| <b>Sr. No.</b> | <b>Marks Range out of 50</b> | <b>Grade point</b> | <b>Letter grade</b> |
|----------------|------------------------------|--------------------|---------------------|
| 1              | 40 – 50                      | 10                 | O: Outstanding      |
| 2              | 35 – 39                      | 9                  | A+: Excellent       |
| 3              | 30 – 34                      | 8                  | A: Very Good        |
| 4              | 28 – 29                      | 7                  | B+: Good            |
| 5              | 25 – 27                      | 6                  | B: Above Average    |
| 6              | 23 – 24                      | 5                  | C: Average          |
| 7              | 20 – 22                      | 4                  | P: Pass             |
| 8              | 0 – 19                       | 0                  | F: Fail             |
| 9              | Absent                       | 0                  | Ab: Absent          |

**Table 3: Final Cumulative Grade Point Average (CGPA) and Final Grade for course**

| Sr. No. | CGPA Range   | Grade | Grade Descriptions |
|---------|--------------|-------|--------------------|
| 1       | 9.50 – 10.00 | O     | Outstanding        |
| 2       | 8.86 – 9.49  | A+    | Excellent          |
| 3       | 7.86 – 8.85  | A     | Very Good          |
| 4       | 6.86 – 7.85  | B+    | Good               |
| 5       | 5.86 – 6.85  | B     | Above Average      |
| 6       | 4.86 – 5.85  | C     | Average            |
| 7       | 4.00 – 4.85  | P     | Pass               |
| 8       | 0.00 – 3.99  | F     | Fail               |
| 9       | Nil          | AB    | Absent             |

**Remarks:**

1. B+ is equivalent to 55% marks and B is equivalent to 50 % marks. The final later grade is based on the grade points in each course of entire programme and not on marks obtained each course of entire programme.
2. The SGPA and CGPA shall be round off to two decimal points.

**Title: B.Sc. Data Science Part I**

1. Year of implementation: Syllabus will be implemented from June 2026 onwards
2. Duration: B.Sc. Data Science Part I. The duration of course shall be one year (Twosemesters).
3. Pattern: Pattern of examination will be semester
4. Medium of Instruction: English
5. Structure Of Course:

**Multiple Entry and Multiple Exit Option (NEP-2020)**

**B.Sc. Data Science Program Structure  
B.Sc. Data Science Part - I (Level-4.5)**

Course Code: **Subject I DSC I:** Course Title: **Python Programming**

Total Contact Hours: **30 hrs. (30 lectures of 60 min)**

Credits: **02**

Teaching Scheme: **Theory – 2 Lectures / Week**

Total Marks: **50**

### Course Outcomes (COs)

After completion of this course students will be able to:

1. To understand the basics of Python programming, variables, operators, and control flow statements.
2. To implement user-defined functions, built-in modules, and string operations.
3. To work with data structures like lists, tuples, and dictionaries, and apply list comprehensions.
4. To apply object-oriented programming concepts such as classes, objects, inheritance, and polymorphism.

| Credits 2       | Contents                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | No. of hours per unit/ credits |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------|
| <b>Unit I:</b>  | Introduction to Python Programming: Python Interpreter and Interactive Mode– Variables and Identifiers – Arithmetic Operators – Values and Types – Statements, Reading Input, Print Output, Type Conversions, The type() Function and Is Operator, Dynamic and Strongly Typed Language. Control Flow Statements, Loops, The continue and break Statements. Functions: Built-In Functions, Commonly Used Modules, Function Definition and Calling the Function, The return Statement and void Function, Scope and Lifetime of Variables, Default Parameters, Keyword Arguments, *args and **kwargs, Command Line Arguments. Strings: Creating and Storing Strings, Basic String Operations, Accessing Characters in String by Index Number, String Slicing and Joining, String Methods, Formatting Strings. | 15                             |
| <b>Unit II:</b> | Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list processing - list comprehension; Illustrative programs: selection sort, insertion sort, merge sort, histogram. Files and exception: text files, reading and writing files, format operator; command line arguments, errors and exceptions, handling exceptions, modules, packages; Illustrative programs: word count, copy file.                                                                                                                                                                                                                                                  | 15                             |

Course Code: **Subject I DSC II:** Course Title: **Linux Utilities and Shell Programming**

Total Contact Hours: **30 hrs. (30 lectures of 60 min)**

Credits: **02**

Teaching Scheme: **Theory – 2 Lectures / Week**

Total Marks: **50**

**Course Outcomes (COs):**

After successful completion of this course, students will able to:

CO 1: Learn architecture and basics of Linux Operating System.

CO 2: Understand the kernel-shell and general-purpose utilities.

CO 3: Understand the working and use of NANO editor.

CO 4: Learn Regular expressions using metacharacters.

CO 5: Learn filters with the help of regular expression.

CO 6: Learn advanced BASH shell Programming.

| Credits 2 | Contents                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | No. of hours per unit/ credits |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------|
| Unit I:   | <b>Introduction to Linux:</b> Operating System Basics, History of Linux, Architecture of Linux, Operating System Services, Shell, Types of Shell, Kernel, Login and Logout, General Purpose Utilities (banner, cal, date, calendar, who, tty, uname, password, lock, echo, tput, bc, clear, script, wc, echo, test, expr), Finding Information of commands. File and Directory Manipulation commands.<br><b>Regular Expressions &amp; Filters:</b> Regular Expressions: Metacharacters, Controlling Repeated Characters through *, +, and ?, Using and Modifying the '.' Metacharacter, Matching from a List of Options, Matching Metacharacters Literally.Filters: cat, tac, head, tail filters and options, sed and sed options, grep and grep options, Line Addressing, Multiple Instruction (-E and -F), Context Addressing, Writing Selected Lines to a File. | (15)                           |
| Unit II:  | <b>NANO Editor:</b> Installing the Nano Text Editor in Linux, Nano Command Keys, Create a New File using Nano, Open an Existing File Using Nano, Edit Files Using Nano Text Editor in Linux, Cut and Paste Lines of Text Using Nano, Valid Shortcuts in Nano Text Editor, Search Text Using Nano, Spell Check Using Nano, Save Your Work Using Nano, Save with Backups.<br><b>BASH Shell Scripting:</b> Shell Scripts, Operators in BASH shell (Arithmetic, Relational, Logical, Assignment, Reassignment, Bit wise), Getting input from keyboard (read command), Conditional Control Statement, Iterative Control Statements, Using test and [ ] to evaluate expressions, String Manipulation, Arrays, Shell Functions.                                                                                                                                           | (15)                           |

**Reference Book:**

1. LINUX with Operating System Concepts by Richard Fox, CRC Press
2. Linux Commands- Instant Reference by Bryan PF affenberge
3. The Design of the Unix Operating System- Bach
4. Unix Shell Programming- Yashwant Kanetkar
5. Unix Concepts and Application – Sumitabha das
6. Linux : The Complete Reference- Richard Peterson

Course Code: **Subject I Practical I: Practical Based on Subject I DSC-I and Subject I DSC-II**

Credits: **02**

Total Marks: **50**

**Course Outcomes (COs):**

On completion of the course, the students will be able to:

- CO1 Students will write simple Python programs using basic programming concepts to solve small problems.
- CO2 Students will use Python to read, process, and store data in files and basic data structures.
- CO3 Students will use basic Linux commands to create, view, copy, move, and delete files and folders.
- CO4 Students will run simple shell commands and scripts to perform basic system tasks.

**List of Laboratory Assignments**

**Subject I DSC-I**

1. Write a program to take two numbers from the user and display their addition, subtraction, multiplication, and division.
2. Write a program to check whether a given number is even or odd.
3. Write a program to find the largest number among three user input numbers.
4. Write a program to generate the Fibonacci series up to n terms.
5. Write a program to check whether a given number is prime or not.
6. Write a program to create a list of numbers and find the sum and average of the list.
7. Write a program to reverse a string entered by the user.
8. Write a program to create a simple function to add two numbers and call it.
9. Write a program to read a text file and count the number of lines and words
10. Write a program to handle division by zero using exception handling.

**Subject I DSC-II**

11. Demonstration of General-Purpose Utilities.
12. Implement file and directory operations: touch, cp, mv, rm, mkdir, rmdir, cd.
13. Write a shell script that prompts the user for a name of a file or directory and reports if it is a regular file, a directory, or another type of file. Also perform an ls command against the file or directory with the long listing option.
14. Pattern matching with grep: Search files for patterns using basic regex (\*, ?, ^, \$, .) and options like -i, -v, -n.
15. Text processing with filters: Use head, tail, wc, and grep to extract and manipulate data files.
16. Advanced filtering: Apply sed for substitutions (s/pattern/replace/g).
17. Write a shell script which copies files from one directory to another during copy command.
18. Create a data file which contains given format and perform the given operations on that data file using sed.
19. Write a shell script using if statements to check file exists or not.
20. Write a shell script to find out given word contains vowel and also the entered vowel is small case or capital.

Course Code: **Subject II DSC I:** Course Title: **Basic Algebra**

Total Contact Hours: **30 hrs. (30 lectures of 60 min)**

Credits: **02** Teaching Scheme: **Theory – 2 Lectures / Week** Total Marks: **50**

**Course Learning Outcomes:** Upon successful completion of the course students will able to:

- CO 1. apply De-Moivre's theorem.
- CO 2. find rank, eigen values, eigen vectors of the matrix.
- CO 3. solve system of linear homogeneous and non-homogeneous equations.
- CO 4. understand Hermitian and Skew Hermitian matrices.

## **UNIT – 1: ALGEBRA OF COMPLEX NUMBERS**

**(15 hrs.)**

- 1.1. Sums and Products, Moduli, Polar form, Geometrical representation of Complex Numbers, Exponential form, arguments of Products and Quotients.
- 1.2. De-Moivre's Theorem and examples
- 1.3 Applications of De-Moivre's Theorem
  - 1.3.1  $n^{\text{th}}$  roots of unity.
  - 1.3.2 Expansion of  $\cos n\theta$ ,  $\sin n\theta$
  - 1.3.3 Circular functions and hyperbolic functions.
  - 1.3.4 Relations between circular and hyperbolic functions.
  - 1.3.5 Inverse circular and hyperbolic functions.

## **UNIT – 2: MATRICES**

**(15 hrs.)**

- 2.1. Introduction
- 2.2 Definitions of Hermitian and Skew Hermitian matrices.
- 2.3. Properties of Hermitian and Skew Hermitian matrices.
- 2.4. Rank of a Matrix, Row-echelon form and reduced row echelon form, normal form.
- 2.5. System of linear homogeneous and non-homogeneous equations.
  - 2.5.1. Condition for consistency.
  - 2.5.2. Nature of the general solution.
  - 2.5.3. Gaussian elimination and Gauss Jordan method  
(Using row-echelon form and reduced row echelon form).
  - 2.5.4. Examples based on 2.4.1, 2.4.2 and 2.4.3.
- 2.6. Characteristic equation, eigen values and eigen vectors of a matrix and examples
- 2.7. Cayley Hamilton theorem and examples.

**Recommended Books:**

Scope: Unit-I: Chapter No. 1: Art.1.2 to Art.1.13, Art. 1.15, Art. 1.17 to Art. 1.19, Art.1.23
2. **Higher Engineering Mathematics** by H. K. Dass, Er. Rajnish Verma, S. Chand and Company Pvt. Ltd. 3<sup>rd</sup> Revised Edition 2014.  
Scope: Unit-II: Art. 19.1 to Art. 19.3, Art. 21.1 to Art. 21.6, Art. 21.27 to Art. 21.30, Art. 20.1 to Art. 20.4

**Reference Books:**

1. **Elementary Linear Algebra (Application Version)**, Howard Anton and Chris Rorres, 10<sup>th</sup> Edition, 2010.
2. **Complex Variables and Applications**, James Ward Brown and Ruel V. Churchill, Mc-Graw Hill, 8<sup>th</sup> Edition, 2009.
3. **Modern Algebra**, A. R. Vasishtha, Krishna Prakashan, Meerut 1994.
4. **A Text Book of Matrices** - Shanti Narayan (Revised by P. K. Mittal), S. Chand and Co., 11<sup>th</sup> Edition, reprint 2007.

Course Code: **Subject II DSC II:** Course Title: **Calculus**

Total Contact Hours: **30 hrs. (30 lectures of 60 min)**

Credits: **02** Teaching Scheme: **Theory – 2 Lectures / Week** Total Marks: **50**

**Course Learning Outcomes:** Upon successful completion of the course students will able to:

- CO 1. find higher derivatives of product two differentiable functions using Leibnitz theorem.
- CO 2. learn conceptual variations while advancing from one variable to several variables in calculus.
- CO 3. understand the consequences of mean value theorems for differentiable functions.
- CO 4. apply L' Hôpital's rule to various indeterminate forms.

### **Unit – 1: Differentiation**

**(15 hrs.)**

#### **1.1. Successive Differentiation**

- 1.1.1. Higher order derivatives: notations.
- 1.1.2. Calculation of  $n^{\text{th}}$  derivative: Standard results
- 1.1.3. Determination of  $n^{\text{th}}$  derivative of rational functions: Examples.
- 1.1.4. The  $n^{\text{th}}$  derivative of product of the powers of sine and cosines: Examples.
- 1.1.5. Leibnitz's Theorem. The  $n^{\text{th}}$  derivative of product of two functions.
- 1.1.6. Examples on Leibnitz's Theorem.

#### **1.2. Partial differentiation**

- 1.2.1. Introduction to functions of two and more variables
- 1.2.2. Partial derivative: first order and higher order – examples.
- 1.2.3. Geometrical interpretation of partial derivatives of first order.

### **Unit – 2: Mean Value Theorems and Indeterminate forms**

**(15 hrs.)**

#### **2.1. Mean Value Theorems**

- 2.1.1. Rolle's Mean Value Theorem, Geometrical interpretation.
- 2.1.2. Lagrange's Mean Value Theorem, Geometrical interpretation.
- 2.1.3. Meaning of sign of derivative
- 2.1.4. Cauchy's Mean Value Theorem.
- 2.1.5. Examples on 2.1.1, 2.1.2, 2.1.3 and 2.1.4

#### **2.2. Indeterminate forms**

- 2.2.1. Indeterminate forms: L' Hôpital's rule for  $\frac{0}{0}$  and  $\frac{\infty}{\infty}$  form (Statement only).
- 2.2.2. The indeterminate forms  $0 \times \infty$ ,  $\infty \square \infty$ ,  $0^0$ ,  $1^\infty$ ,  $\infty^0$

#### **2.3. Expansion of functions**

- 2.3.1. Maclaurin's theorem (statement only): Examples.
- 2.3.2. Taylor's theorem (statement only): Examples.

**Recommended Books:**

1. **Differential Calculus**, Shanti Narayan and P.K. Mittal, S. Chand publishing, 15<sup>th</sup> edition (2016).

**Scope:**

**Unit 1 – 1.1:** Chapter 5: 5.1 to 5.5

**1.2:** Chapter 11: 11.6, 11.6.1, 11.7.1

**Unit 2 – 2.1:** Chapter 8: 8.1, 8.2, 8.3, 8.5

**2.2:** Chapter 10: 10.1 to 10.6

**2.3:** Chapter 6: 6.1, 6.2

**Reference Books:**

1. **Differential Calculus**, Gorakh Prasad, Pothishala Pvt. Ltd., 19th edition (2016).
2. **Aspects of Calculus**, Gabriel Klambauer, Springer-Verlag (1986).
3. **Differential Calculus**, Hari Kishan, Atlantic Publishers & Dist. (2007).
4. **Calculus**, George B. Thomas Jr., Joel Hass, Christopher Heil & Maurice D. Weir, Pearson Education, 14<sup>th</sup> edition (2018).

Course Code: **Subject III DSC I: Course Title: Descriptive Statistics – I**  
**30 hrs. (30 lectures of 60 min)**

Total Contact Hours:

Credits: **02** Teaching Scheme: **Theory – 2 Lectures / Week** Total Marks: **50**

**Course Outcomes:** The students will acquire knowledge of

- i. Meaning and scope of Statistics, various statistical organizations.
- ii. Population, sample and various methods of sampling.
- iii. Various measures of central tendencies and dispersion.
- iv. Moments, skewness and kurtosis.
- v.

## **CONTENTS:**

### **Unit - 1**

**(15 hrs.)**

**1.1 Introduction to Statistics:** Meaning of Statistics as a Science, Importance of Statistics, Definition of Statistics, Various fields where Statistics is used, Names of various statistical organizations in India.

- **Population and Sample:** Statistical population. Finite population, Infinite population, Census method, Sampling method, Advantages of sampling method over census method.
- **Methods of sampling (Description only):** Sample and Random sample, Simple random sampling with and without replacement (SRSWR and SRSWOR), Stratified random sampling, Systematic sampling.

**1.2 Nature of Data:** Primary and Secondary data, Time series data, Quantitative and Qualitative data, Attributes, Variables, Discrete and Continuous variables, Scales of measurement - Nominal, Ordinal, Interval and Ratio scale, illustrative examples.

- **Presentation of Data: Classification:** Raw data and its classification, Discrete frequency distribution, Continuous frequency distribution, Cumulative frequency distribution, Inclusive and Exclusive methods of classification, Open end classes, Relative frequency distribution, illustrative examples.

### **Unit - 2**

**(15 hrs.)**

**2.1 Measures of Central Tendency:** Mathematical and positional, Concept of central tendency of statistical data, statistical average, requirements of good statistical average.

- **Arithmetic Mean (A.M.):** Definition, Effect of change of origin and scale, Deviation of observations from A.M., Mean of pooled data, Weighted A.M.
- **Geometric Mean (G.M.):** Definition, illustrative examples.
- **Harmonic Mean (H.M.):** Definition, Relation:  $A.M \geq G.M \geq H.M$  (proof for  $n = 2$  positive observations), illustrative examples.
- **Median:** Definition, Derivation of formula for grouped frequency distribution.
- **Mode:** Definition, Derivation of formula for grouped frequency distribution. Empirical relation between mean, median and mode. Graphical method of determination of Median and Mode.
- **Partition values:** Quartiles, Deciles and Percentiles. Comparison between averages in accordance with requirements of good average. Situations where one kind of average is preferable to others, illustrative examples.

**2.2 Measures of Dispersion:** Concept of dispersion, Absolute and Relative measures of dispersion, Requirements of a good measure of dispersion.

- **Range:** Definition, Coefficient of range.
- **Quartile Deviation (Q. D. or Semi-inter quartile range):** Definition, Coefficient of Q.D.,
- **Mean Deviation (M.D.):** Definition, Coefficient of M.D., Minimal property of M.D.,
- **Mean Square Deviation (M.S.D.):** Definition, Minimal property of M.S.D.,
- **Variance and Standard Deviation (S.D.):** Definition, Effect of change of origin and scale, variance and S.D. of pooled data (proof for two groups).
- **Coefficient of Variation:** Definition and use. Illustrative examples.

### **2.3 Moments, Skewness and Kurtosis:**

- **Moments:** Raw moments and central moments for ungrouped and grouped data. Effect of change of origin and scale on central moments, relation between central moments and raw moments (up to 4<sup>th</sup> order). Sheppard's corrections.
- **Skewness:** Concept of skewness of a frequency distribution, types of skewness. Bowley's coefficient of skewness, Karl Pearson's coefficient of skewness, measure of skewness based on moments.
- **Kurtosis:** Concept of kurtosis of a frequency distribution, Types of kurtosis, Measure of kurtosis based on moments. Illustrative examples.

### **Books Recommended:**

1. Bhat B. R., Srivenkatramana T. and Madhava Rao K. S. (1996): Statistics: A Beginner's Text, Vol. 1, New Age International (P) Ltd.
2. Croxton F. E., Cowden D.J. and Kelin S. (1973): Applied General Statistics, Prentice Hall of India.
3. Goon A.M., Gupta M.K., and Dasgupta B.: Fundamentals of Statistics Vol. I and II, World Press, Calcutta.
4. Gupta S. P. (2002): Statistical Methods, Sultan Chand and Sons, New Delhi.
5. Gupta V.K. & Kapoor S.C.: Fundamentals of Mathematical Statistics.- Sultan & Chand.
6. Hogg R. V. and Crag R. G.: Introduction to Mathematical Statistics Ed.4.
7. Hoel P. G. (1971): Introduction to Mathematical Statistics, Asia Publishing House.

Course Code: **Subject III DSC II:** Course Title: **Elementary Probability Theory**  
Total Contact Hours: **30 hrs. (30 lectures of 60 min)**  
Credits: **02** Teaching Scheme: **Theory – 2 Lectures / Week** Total Marks: **50**

**Course Outcomes:** Students will be able to;

- Distinguish between random and non-random experiments
- Use the basic probability rules, including additive and multiplicative laws
- Understand concept of conditional probability and independence of events.
- Understand concept of univariate random variable and its probability distributions

## CONTENTS:

### Unit - 1

(15 hrs.)

**1.1 Sample space:** Concepts of experiments and random experiments. Definitions: Sample space, Discrete sample space (finite and countably infinite).

- **Events:** Elementary event, Compound event. Algebra of events (Union, Intersection, Complementation). Definitions of mutually exclusive events, Exhaustive events, Impossible events, Certain event.
- **Power set  $P(\Omega)$**  (sample space consisting at most 3 sample points). Symbolic representation of given events and description of events in symbolic form. Illustrative examples.

**1.2 Probability:** Equally likely outcomes (events), a priori (classical) definition of probability of an event. Equi-probable sample space, simple examples of computation of probability of the events based on permutations and combinations. Definition of probability in terms of odd ratio with illustrative examples.

- **Axiomatic definition of probability and proof of the results:** i)  $P(\Phi) = 0$ , ii)  $P(A^c) = 1 - P(A)$ ,  
iii)  $P(A \cup B) = P(A) + P(B) - P(A \cap B)$  (with proof) and its generalization (Statement only),  
iv) If  $P(A \subset B)$ ,  $P(A) \leq P(B)$  v)  $0 \leq P(A \cap B) \leq P(A) \leq P(A \cup B) \leq P(A) + P(B)$ .
- **Conditional Probability:** Definition of conditional probability of an event. Multiplication theorem for two events. Examples on conditional probability.

### Unit - 2

(15 hrs.)

**2.1 Independence of events:** Concept of independence of two events. Proof of the result that if A and B are independent then, i) A and  $B^c$  are independent, ii)  $A^c$  and B are independent, iii)  $A^c$  and  $B^c$  are independent. Pairwise and Mutual independence for three events. Elementary examples.

- **Baye's theorem:** Partition of sample space, Idea of posterior probability, statement and proof of Baye's theorem, illustrative examples on Baye's theorem.
- **Univariate Probability Distributions (finite sample space):** Definition of discrete random variable. Probability mass function (p.m.f.) and cumulative distribution function (c.d.f.) of a discrete random variable, Properties of c.d.f. (statements only). Probability distribution of function of random variable.
- **Median and mode:** Median and mode of a univariate discrete probability distribution. Examples.

- 2.2 Mathematical expectation (Univariate random variable):** Definition of expectation of a random variable. Expectation of a function of a random variable, Results on expectation of a functions of a random variable: i)  $E(c) = c$ , where  $c$  is a constant, ii)  $E(aX + b) = aE(X) + b$ , where  $a$  and  $b$  are constants,
- **Mean and variance:** Definitions of mean and variance of univariate distribution,  

$$V(aX + b) = a^2V(X)$$
  - **Raw and central moments:** Definition of raw and central moments.
  - **Probability generating function (p.g.f.):** Definition of probability generating function (p.g.f.) of a random variable, Mean and variance by using p.g.f., Effect of change of origin and scale on p.g.f.

### **Books Recommended:**

1. Agarwal B. L. (2003). Programmed Statistics, second edition, New Age International Publishers, New Delhi.
2. Gupta, S.C. and Kapoor, V. K. (1983). Fundamentals of Mathematical Statistics, Eighth Edition, Sultan Chand and Sons Publishers, New Delhi.
3. Hoel P. G. (1971). Introduction to Mathematical Statistics, John Wiley and Sons, New York.
4. Hogg, R.V. and Craig R.G.(1989).Introduction to Mathematical Statistics, Ed. MacMillan Publishing Co., New York.
5. Mayer, P. (1972). Introductory Probability and Statistical Applications, Addison Wesley Publishing Co., London.
6. Mood, A. M. and Graybill, F. A. and Boes D.C. (1974). Introduction to the Theory of Statistics, Ed. 3, Mc Graw Hill Book Company.
7. Rao, VLS Prakash (2008). First Course in Probability and Statistics, New Age International Publishers, New Delhi.
8. Ross S. (2002). A First Course in Probability, Sixth Edition, Pearson Education, Inc. & Dorling Kindersley Publishing, Inc.
9. Rohatgi V. K. and Saleh A. K. Md. E. (2002): An Introduction to probability and statistics. John wiley & Sons (Asia).

Credits: **2**

Total Marks: **50**

**Pre requisites:** Knowledge of the topics in the theory papers.

**Course Outcomes:** Students will able to;

- i. Acquire knowledge of computations using MS-Excel.
- ii. Represent statistical data diagrammatically and graphically.
- iii. Compute various measures of central tendency, dispersion, moments, skewness and kurtosis.
- iv. Interpret summary Statistics of computer output.

**List of Practicals:**

1. Data handling and computations using MS-Excel.
2. Diagrammatic and Graphical presentation.
3. Use of random numbers to draw SRSWOR, SRSWR sample.
4. Use of random numbers to draw Stratified and Systematic sample.
5. Measures of central tendency.
6. Measures of the dispersion.
7. Moments, skewness and kurtosis.
8. Computation of probabilities using Baye's theorem.
9. Case study equivalent to 2 practicals.

**Notes:**

- a. Students must complete all experiments using MS-Excel.
- b. Case study - Different data sets from newspapers, internet, and magazines may be collected and students will be asked to use statistical techniques/tools which they have learnt.
- c. MS-Excel should be used at the time of practical examination for calculation.
- d. Student must complete the entire practical to the satisfaction of the teacher concerned.
- e. Student must produce laboratory journal along with completion certificate signed by Head of the Department, at the time of practical examination.

**Laboratory Requirements:**

Laboratory should be well equipped with at least 20 computers along with necessary Software's, at least two printers, sufficient back up facility (UPS/ Inverter/ Generator).

**Nature of Practical Question Paper:**

- a. In the practical question paper there shall be four questions each of 16 marks, a student has to attempt any two questions.
- b. Computations should be completed using MS-Excel and should be demonstrated to examiner. Experiment aim, formulae, results etc. should be written on practical answer paper.
- c. 8 marks are reserved for case study, 5 marks are reserved for the journal and 5 marks for the oral examination.
- d. Practical examination is of four hours duration which includes viva (oral) examination and on line demonstration.

## **OE-I : Business Statistics using MS Excel/Linux**

### **Practical – I**

#### **Course Outcomes:**

After completing this course, the student will be able to:

- i. Organize and manage business data using MS Excel operations such as data entry, sorting and filtering.
- ii. Compute measures of central tendency and dispersion using Excel functions.
- iii. Construct frequency distribution tables and represent data using histograms and charts in Excel.
- iv. Analyze the relationship between variables using correlation techniques in Excel.
- v. Compute and interpret index numbers for analyzing changes in business data using Excel.

#### **List of Practicals**

1. Introduction to MS Excel and data entry, sorting and filtering.
2. Measures of Central Tendency using Excel functions.
3. Measures of Dispersion using Excel.
4. Data Visualization using Charts (Bar, Pie, Line).
5. Frequency Distribution and Histogram in Excel.
6. Correlation Analysis using Excel.
7. Index Numbers using Excel.

Credits: **02** Teaching Scheme: **Theory – 2 Lectures / Week** Total Marks: **50**

### Course Outcomes (COs)

After completion of this course students will be able to:

- 1: Understand database concepts, need for DBMS, and its advantages over file systems.
- 2: Analyze DBMS types, architectures, and design ER models.
- 3: Apply keys, constraints, and normalization to design efficient databases.
- 4: Use SQL for data definition, manipulation, and querying with joins and subqueries.
- 5: Explain transaction management and apply ACID properties and control commands.

| Credits 2       | Contents                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | No. of hours per unit/ credits |

|                 | <b>Introduction to DBMS and Database Design</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 15                             |
|                 | <b>What is a Database?</b> Need for DBMS, Advantages of DBMS over File System, Components of DBMS, Applications of DBMS in AI, Types of DBMS: Hierarchical, Network, Relational, Object-Oriented, <b>DBMS Architecture:</b> Three-level schema, Data Models: Relational Model (structure, importance), Entity, Attribute, Relationship, ER Diagrams: Symbols, Notations, and Examples, Mapping ER Model to Relational Schema, <b>Types of Keys:</b> Primary, Candidate, Super, Foreign, Integrity Constraints: Domain, Entity, Referential, Problems of Un-Normalized Database, Features of Good Relational Design, <b>Data Anomalies:</b> Insertion, Deletion, Update, Functional Dependencies Inference Rules, Normalization: 1NF, 2NF, 3NF, BCNF, 4NF, Concepts of Lossless Join and Dependency Preservation. |                                |
| <b>Unit II:</b> | <b>SQL Basics and Data Manipulation</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 15                             |
|                 | <b>Introduction to SQL</b> , Data Definition Language (DDL): CREATE, ALTER, DROP, Basic Constraints: NOT NULL, UNIQUE, PRIMARY KEY, FOREIGN KEY, Data Manipulation Language (DML): INSERT, UPDATE, DELETE, SELECT Statement and Filtering Data: WHERE, ORDER BY, GROUP BY and HAVING Clause, Pattern Matching: LIKE, IN, BETWEEN, IS NULL, Aggregate Functions: COUNT, SUM, AVG, MIN, MAX. <b>Types of Joins:</b> INNER, LEFT, RIGHT, FULL (basic use cases), Subqueries: Single-row, Multi-row, Nested Subqueries, Set Operations: UNION, INTERSECT, EXCEPT, <b>Introduction to Transactions and ACID Properties:</b> Atomicity, Consistency, Isolation, Durability Transaction Control Commands: COMMIT, ROLLBACK, SAVEPOINT                                                                                   |                                |

[PostgreSQL will be used as the primary database platform for delivering both theoretical concepts and practical exercises in this course.]

### Reference Books:

1. Abraham Silberschatz, Henry F. Korth, S. Sudarshan, McGraw Hill
2. Ramez Elmasri, Shamkant B. Navathe, Pearson Education
3. Database Management Systems, Raghu Ramakrishnan, Johannes Gehrke, McGraw Hill
4. An Introduction to Database Systems, C.J. Date, Pearson Education
5. SQL: The Complete Reference, James R. Groff, Paul N. Weinberg, McGraw Hill

**Course Outcomes (COs):**

On completion of the course, the students will be able to:

- 1: Understand the fundamentals of data analysis and its applications
- 2: Utilize NumPy for numerical computing and array operations
- 3: Apply Pandas for data manipulation, cleaning, and analysis
- 4: Implement data visualization techniques using Matplotlib and Pandas

| <b>Credits 2</b> | <b>Contents</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>No. of hours per unit/ credits</b> |

2. Pandas Official Documentation: <https://pandas.pydata.org/docs/>
3. Matplotlib Official Documentation: <https://matplotlib.org/>

Course Code: **Subject I Practical II**

Course Title: **Practical Based on Subject I DSC-III and Subject I DSC-IV**

Credits: **02**

Teaching Scheme: **Practical's – 2 Lectures / Week**

Total Marks: **50**

### **Course Outcomes (COs):**

On completion of the course, the students will be able to:

CO1: Implement Basic SQL Queries

CO2: Implement CRUD (Create, Read, Update, Delete)

CO3: Students will collect, clean, and organize small datasets for analysis.

CO4: Students will perform basic data analysis and present results using simple charts and reports.

### **List of Laboratory Assignments**

#### **Subject I DSC-III**

1. Practical on DDL Command
2. Practical on DML Command
3. Practical on TCL Command
4. Aggregation Functions: Table Name: `Students`  
Find the minimum, maximum, average age, and the total number of students in the `Students` table.
5. Group By and Having Clauses:

Table Name: `Courses`

Group the courses by `Credits` and show the count of courses for each credit value, only for groups having more than one course.

6. Table Name: `Students` Retrieve all students ordered by `Name` in ascending order.
7. Write SQL queries to find the youngest (minimum age) and oldest (maximum age) students in the Students table.
8. Write an SQL query to calculate the average number of credits for all courses in the Courses table.
9. Table Names: Enrollments (with columns: EnrollmentID, StudentID, CourseID, Grade), `Courses`  
Write an SQL query to find the average grade for each course, but only include courses that have at least 1 enrollments.
10. Practical on joining

#### **Subject I DSC-IV**

11. Write a NumPy program to create arrays of different dimensions (1D, 2D, 3D) and display their properties
12. Write a NumPy program to find the most frequent value in an array
13. Write a NumPy program to generate random numbers from normal distribution and calculate their statistical properties.
14. Write a NumPy program to calculate the difference between the maximum and minimum values of an array.
15. Write a Pandas program to convert a NumPy array to a Pandas Series.
16. Write a Pandas program to create a DataFrame and convert its first column as a Series.
17. Write a Pandas program to import data from Excel and CSV files.
18. Write a program to create line plots using Matplotlib and Pandas.
19. Write a program to create scatter plots and visualize correlations between variables
20. Write a program to create bar charts and histograms for data distribution analysis.

Course Code: **Subject II DSC III** Course Title: **Differential Equations - I**

Credits: **02**

Teaching Scheme: **2 Lectures / Week**

Total Marks: **50**

**Course Learning Outcomes:** Upon successful completion of the course students will be able to:

- CO 1. classify differential equations.
- CO 2. solve different types of differential equations.
- CO 3. find orthogonal trajectories.
- CO 4. apply the knowledge of differential equations to tackle problems occurring in physics and engineering.

**Unit 1. Ordinary differential equations of first order and first degree (15 hrs.)**

- 1.1 Introduction.
- 1.2 Exact differential equations.
  - 1.2.1 Necessary and sufficient condition for exactness.
  - 1.2.2 Differential equations reducible to exact, integrating factors with rules.
- 1.3 Linear differential equations.
- 1.4 Differential equations reducible to linear.
- 1.5 Applications of differential equations of first order and first degree:
  - 1.5.1 Law of growth.
  - 1.5.2 Law of decay.
  - 1.5.3 Newton's law of cooling.
  - 1.5.4 Orthogonal trajectories to Cartesian and Polar curves.
- 1.6 Examples based on 1.1 to 1.5.

**Unit 2. Linear differential equations with constant coefficients (15 hrs.)**

- 2.1 Introduction.
- 2.2 Auxiliary equation, Complementary function.
- 2.3 Types of complementary functions:
  - 2.3.1 Distinct real roots, repeated real roots, complex roots, repeated complex roots,
- 2.4 Particular integrals:
  - 2.4.1 Particular integrals of the functions:  $e^{ax}$ ,  $\sin ax$ ,  $\cos ax$ ,  $x^m$ ,  $e^{ax} \cdot V$  and  $x \cdot V$ .
- 2.5 Applications to Electrical circuits.
- 2.6 Examples based on 2.1 to 2.5.

**Recommended Book:**

1. M. D. Raisinghania, Ordinary and Partial Differential Equations, 20<sup>th</sup> Revised Edition 2022; S.Chand and Company Pvt.Ltd.NewDelhi.  
Scope: Part 1 : Unit 2: 2.12 to 2.32, Unit 3: 3.1 to 3.8, Unit 5 : 5.1 to 5.25.

**Reference Books:**

1. Dr. A. B. Mathur and V. P. Jaggi, Advanced Engineering Mathematics, Khanna Publishers, 2<sup>nd</sup> edition, 2001.
2. R. K. Ghosh and K. C. Maity, An Introduction to Differential Equations, Book and Allied (P) Ltd., Seventh Edition, 2000.
3. D. A. Murray, Introductory Course in Differential Equations, Khosala Publishing House, Delhi.
4. Zafar Ahasan, Differential Equations and Their Applications, Second Edition, PHI2004.

**Course Learning Outcomes:** Upon successful completion of the course students will be able to:

- CO 1. analyze the logical structure of statements symbolically, including the proper use of logical connectives, predicates, and quantifiers.
- CO 2. construct truth tables, prove or disprove a hypothesis, and evaluate the truth of a statement using the principles of logic.
- CO 3. understand and apply the fundamental concepts in graph theory.
- CO 4. acquire the basic knowledge of graphs namely vertex, edge, special types of graph, isomorphic graphs, matrix representation of graphs.

**Unit- 1 Propositional Calculus (15 hrs.)**

**1.1 Revision**

- 1.1.1 Propositional Logic.
- 1.1.2 Propositional equivalence.

**1.2 Predicates and Quantifiers:**

- 1.2.1 Predicate, n-place Predicate, n-ary Predicate.
- 1.2.2 Quantification and Quantifiers, Universal Quantifier, Existential Quantifier, Quantifiers with restricted domains.
- 1.2.3 Logical Equivalence involving Quantifiers.

**1.3 Rules of Inference:**

- 1.3.1 Argument in propositional Logic.
- 1.3.2 Validity Argument (Direct and Indirect methods)
- 1.3.3 Rules of Inference for Propositional Logic.
- 1.3.4 Building Arguments

1.4 Numerical Problems based on 1.2 to 1.3

**Unit- 2 Graph Theory (15 hrs.)**

**2.1 Graphs:**

- 2.1.1 Basic Terminology
- 2.1.2 Special types of Graphs (Complete graph, Regular graph, Bipartite and complete Bipartite graph)
- 2.1.3 Isomorphism
- 2.1.4 Adjacency and Incidence Matrix of Graph
- 2.1.5 Problems based on 2.1.2 to 2.1.4

**2.2 Operations on Graph:**

- 2.2.1 Subgraphs, vertex deletion, Edge addition.
- 2.2.2 Complement of a graph and self-complementary graphs.
- 2.2.3 Union, Intersection and Product of graphs.
- 2.2.4 Problems based on 2.1.1 to 2.1.3

**Recommended Book:**

1. Discrete Mathematics, S. R. Patil , M. D. Bhagat , R. S. Bhamare, S. M. Waingade, N. M. Phatangare and K. D. Masalkar, Nirali Prakashan, Pune.

| <b>Pr. No</b> | <b>Title of the Practical</b>                                                        | <b>No. of Practicals</b> |
|---------------|--------------------------------------------------------------------------------------|--------------------------|
| 1.            | Differential equations reducible to exact                                            | 1                        |
| 2.            | Linear differential equations                                                        | 1                        |
| 3.            | Bernoulli's Differential equations                                                   | 1                        |
| 4.            | Law of growth                                                                        | 1                        |
| 5.            | Law of decay                                                                         | 1                        |
| 6.            | Newton's law of cooling                                                              | 1                        |
| 7.            | Orthogonal Trajectories to Cartesian Curves                                          | 1                        |
| 8.            | Orthogonal Trajectories to Polar Curves                                              | 1                        |
| 9.            | Linear differential equations with constant coefficients (examples on finding C. F.) | 1                        |
| 10.           | Particular integrals of the functions: $e^{ax}$ , $\sin ax$ , $\cos ax$              | 1                        |
| 11.           | Particular integrals of the functions: $x^m$ , $e^{ax} \cdot V$ and $x \cdot V$      | 1                        |
| 12.           | Test the validity of the argument using truth table.                                 | 1                        |
| 13.           | Show the implications without using truth table.                                     | 1                        |
| 14.           | Draw the graph represented by the given adjacency matrix.                            | 1                        |
| 15.           | Find the incidence matrix of the given graphs.                                       | 1                        |

**Course Outcomes:** The students will acquire knowledge of

- i. the time series data and its analysis,
- ii. rates of vital events, its computation and interpretation,
- iii. how to compute and interpret index numbers,
- iv. cost of living index number and its utility,

## **Unit 1:**

**(15 hrs.)**

### **1.1 Analysis of Time Series Data:**

- Meaning and need of time series data analysis.
- Components of time series: (i) secular trend (ii) seasonal variations (iii) cyclical variations (iv) random or irregular variations.
- Additive model and multiplicative model.
- Utility of time series data analysis.
- Measurement of secular trend by using: (i) moving average method (ii) progressive average method (iii) least square method.
- Measurement of seasonal variations by simple average method.

### **1.2 Demography:**

- Introduction and need of vital statistics;
- Vital events and rates of vital events,
- Measurement of fertility: Crude Birth Rate (CBR), Age Specific Fertility Rate (ASFR), General Fertility Rate (GFR) and Total Fertility Rate (TFR);
- Measurement of mortality: Crude death rate (CDR), Specific Death Rate (SDR), Age Specific Death Rate (ASDR), Infant Mortality Rate (IMR), Standardized Death Rate (STDR) by i) direct method ii) indirect method ;
- Measurement of Population Growth: Gross Reproduction Rate (GRR), Net Reproduction Rate (NRR), relation between GRR and TFR; Introduction to Life tables.

## **Unit 2**

**(15 hrs.)**

### **2.1 Index Numbers:**

- Meaning and utility of index numbers.
- Price, Quantity and Value index numbers.
- Problems in the construction of index numbers.
- Types of index numbers: Un-weighted and weighted index numbers.
- Methods of computing un-weighted index numbers: (a) Simple aggregate method and (b) Average of price or quantity relative method (using A.M. or G.M.).
- Methods of computing weighted index numbers: (a) Laspeyre's method (b) Paasche's method and (c) Fisher's method.

## 2.2 Tests of Index Numbers:

- Unit test, time reversal test and factor reversal tests.
- Cost of living index numbers, construction of cost of living index numbers by using (i) Family budget method and (ii) Aggregate expenditure method.
- Purchasing power of money; difference between money wages and real wages.
- Meaning and interpretation of BSE (Bombay Stock Exchange) and NSE (National Stock Exchange) indices.

Course Code: **Subject III DSC IV**  
Course Title **DISCRETE PROBABILITY DISTRIBUTIONS**

Credits: **02**

Teaching Scheme: **Practical's – 2 Lectures / Week**

Total Marks: **50**

**Course Outcomes:** The students will acquire knowledge of

- i. One point, Two point and Bernoulli distributions,
- ii. Discrete uniform, Binomial and Hypergeometric distributions,
- iii. Poisson, Geometric and Negative binomial distributions.
- iv. Applications of these distributions in real-life situations.

**Unit 1:**

**(15 hrs.)**

**1.1** Some standard discrete distributions on finite sample space-I:

- One point distribution: p. m. f., mean and variance,
- Two point distribution: p. m. f., mean and variance,
- Bernoulli distribution: p. m. f., p. g. f., mean, variance.
- Discrete Uniform Distribution: p. m. f., mean and variance.

**1.2** Some standard discrete distributions on finite sample space-II:

- Binomial Distribution: Genesis of the distribution, Binomial random variable, p. m. f. with parameters (n, p), recurrence relation for obtaining successive probabilities, mean, variance and mode of the distribution; skewness, p. g. f., Additive property of binomial variates; distribution of sum of independent and identically distributed Bernoulli variables, numerical problems.
- Hypergeometric Distribution: Genesis of the distribution, p. m. f. with parameters (N, M, n), Computation of probability of different events, recurrence relation for successive probabilities, mean and variance of distribution assuming  $n \leq N - M \leq M$ , Approximation of Hypergeometric to binomial distribution (Statement only), numerical problems.

**Unit 2:**

**(15 hrs)**

Some standard discrete probability distributions on countable infinite sample space:

**2.1 Poisson distribution:** Genesis of the distribution; probability mass function (p. m. f.) of Poisson distribution with parameter  $\lambda$ , mean, variance, probability generating function (p. g. f.); Recurrence relation for obtaining successive probabilities; Additive property of Poisson distribution; Poisson distribution as a limiting case of Binomial distribution (Statement Only); numerical problems.

**2.2 Geometric and Negative Binomial distributions:**

- Geometric Distribution: Genesis of the distribution, probability mass function (p. m. f.) of Geometric distribution with parameter p, mean and variance, cumulative distribution function (c. d. f.), probability generating function (p. g. f.); Lack of memory property; numerical problems.
- Negative Binomial Distribution: Genesis of the distribution, probability mass function (p. m. f.) of Negative

binomial distribution with parameters  $(k, p)$ . Geometric distribution as a particular case of Negative binomial distribution; mean, variance and p. g. f.; recurrence relation for obtaining successive probabilities; numerical problems.

### **Books Recommended:**

1. Gupta S. C. & Kapoor V.K.: Fundamentals of Mathematical Statistics. Sultan Chand & sons, New Delhi.
2. Goon, A.M., Gupta M.K. and Dasgupta B: Fundamentals of Statistics Vol. I and Vol. II World Press, Calcutta.
3. Hogg R. V. and Criag A.T.: Introduction to Mathematical Statistics (Third edition), Macmillan Publishing, New York.
4. Mood A.M., Graybill F.A.: Introduction to theory of Statistics. 5. Boes D.C. Tata, McGraw Hill, New Delhi. (Third Edition)

Course Code: **Subject III Practical II**

Course Title: **Statistical Practical II**

Credits: **02** Teaching Scheme: **Practical's – 2 Lectures / Week** Total Marks: **50**

**Pre requisites:** Knowledge of the topics in the theory papers.

**Course Outcomes:** After completion of this course, students will be able to:

- i. analysis and interpret time series data,
- ii. compute and interpret population mortality, fertility and growth rates,
- iii. compute and interpret price, quantity and value index numbers,
- iv. understand the applications of discrete probability distributions.

### **List of Practicals:**

1. Analysis of Time Series data. (Measurement of trend by moving average, progressive average and least square methods, Seasonal indices by simple average method).
2. Demography-I (Measurement of Mortality rates).
3. Demography-II (Measurement of Fertility and reproduction rates).
4. Computation of Index numbers.
5. Applications of discrete uniform and Binomial distributions.
6. Applications of Hypergeometric distribution.
7. Applications of Poisson distribution.
8. Applications of Geometric and Negative Binomial distributions.
9. Case study equivalent to 2 Practicals.

### **Notes:**

- a) Students must complete all experiments using MS-EXCEL.
- b) Case study – In case study, students are expected to analyze real data sets (primary or secondary) using statistical techniques / tools which they have learnt.
- c) MS-EXCEL should be used at the time of practical examination for calculation.
- d) Student must complete the entire practical to the satisfaction of the teacher concerned.
- e) Student must produce laboratory journal along with completion certificate signed by Head of the Department, at the time of practical examination.

**Laboratory Requirements:** Laboratory should be well equipped with at least 20 computers along with necessary softwares, at least two printers, sufficient back up facility (UPS/ Inverter/ Generator). **Nature of Practical Question Paper:**

- a) In the practical question paper there shall be four questions each of 16 marks, a student has to attempt any two questions.
- b) Computations should be completed experiments using MS-EXCEL and should be demonstrated to examiner. Aim of the experiment, Formulae, Results etc. should be written on practical answer paper.
- c) 8 marks are reserved for case study, 5 marks are reserved for the journal and 5 marks for the oral examination.
- d) Practical examination is of four hours duration which includes viva (oral) examination and on line demonstration.

## **OE-II: Business Statistics using MS Excel/Linux Practical – II**

### **Course Outcomes:**

After completing this course, the student will be able to:

- i. Fit and interpret simple linear regression models using MS Excel.
- ii. Analyze time series data and determine trends using moving averages in Excel.
- iii. Apply basic probability concepts and compute probabilities using Excel functions.
- iv. Compute probabilities for binomial and normal distributions using Excel.
- v. Perform hypothesis testing and interpret results using Excel tools for business decision making.

### **List of Practical's**

1. Linear Regression using Excel.
2. Time Series Analysis using Moving Averages.
3. Probability Calculations using Excel functions.
4. Binomial Distribution using Excel.
5. Normal Distribution using Excel.
6. Poison Distribution using Excel.
7. Business Data Analysis Project using Excel.

## **Title of course: VEC- I Democracy, Election and Constitution**

Syllabus will be provided by Shivaji University as per NEP

### **Course Outcomes:**

After completion of this course students will be able to;

1. The overall course of political science develops the understanding of the basic concepts of Politics, Political theory and Political science.
2. Social democracy thus aims to create the conditions for capitalism to lead to greater democratic, egalitarian and solidaristic outcomes
3. A course focused on democracy, elections, and the constitution typically aims to equip students with a strong understanding of democratic principles.
4. Understand the concept, principles, and types of democracy, including direct and representative democracy.
5. Explain the role of decentralization and the 73rd and 74th Constitutional Amendments in grassroots governance.
6. Evaluate the structure and process of elections at national, state, and local levels, and the role of the State Election Commission.
