SHIVAJI UNIVERSITY, KOLHAPUR.

Accredited By NAAC with 'A' Grade

Revised Syllabus For

Master of Science

Part- II

PHYSICS

CBCS PATTERN

Syllabus to be implemented from

June, 2019 onwards.

Department of Physics, Shivaji University, Kolhapur M. Sc. –Part-II (Physics) Course Structure

NOTE:

The elective courses are offered during the second year. The following in a nutshell gives the scope and extent of each course offered. Each core theory course has two levels of teaching: Lectures and internal exam. There are common laboratories as well as special laboratories associated with electives. A Project Course, equivalent to two full theory courses enables the student to work on specific problems of her/his interest under a faculty member's guidance.

M.Sc. (Physics) (Part-II) SEMESTER-III

CORE PAPER (COMPULSORY)

M.Sc. (Physics)-Part-II Semester-III (Total 4-creadits)

Paper No	Paper Title	Credits
CP-IX	Nuclear and Particle Physics	4-credits

CHOICE BASE PAPER (ANY ONE PAPER)

M.Sc. (Physics)-Part-II Semester-III (Total 4-creadits)

Paper Code	Paper Title	Credits
CBP-I	Data Analysis and Statistical Software (2-credits)+Tutorials/LAB work (2- credits)	4-credits
CBP-II	Numerical Computing Using MATLAB (2-credits) +Tutorials/LAB work (2-credits)	4-credits
CBP-III	Computational Programming using Mathematica (2-credits)+Tutorials/LAB work (2-credits)	4-credits

M.Sc. (Physics) (Part-II) SEMESTER-IV

CORE PAPER (COMPULSORY)

M.Sc. (Physics)-Part-II Semester-IV (Total 4-creadits)

Paper Code	Paper Title	Credits
CP-X	EXPERIMENTAL TECHNIQUES	4-credits

CHOICE BASE PAPER (ANY ONE PAPER)

M.Sc. (Physics)-Part-II Semester-III (Total 4-creadits)

Paper Code	Paper Title	Credits
CBP-IV	Numerical Methods and Programming	4-credits
CBP-V	MATLAB Programming and applications (2-credits) +Tutorials/LAB work (2-credits)	4-credits
CBP-VI	Electronic Devices-4-credits	4-credits

ELECTIVE PAPERS (Any one Group)

Group-I (ENERGY SCIENCE) (Total 16-creadits)

M.Sc. (Physics)-Part-II (Semester-III)

- ES-1. The New Energy Technologies (4-credits)
- ES-2. Solar Thermal Devices(4-credits)

ENERGY SCIENCE PROJECT WORK–I (4-c redits)

ENERGY SCIENCE LAB–I (4-credits)

M.Sc. (Physics)-Part-II (Semester-IV)

- ES-3. Renewable Energy Resources (4-credits)
- ES-4. Energy Conversion Devices (4-credits)

ENERGY SCIENCE PROJECT WORK-II (4-credits)

ENERGY SCIENCE LAB-II (4-credits)

Group-II (MATERIALS SCIENCE) (Total 16-creadits)

M.Sc. (Physics)-Part-II (Semester-III)

- MS-1. Imperfections in crystals(4-credits)
- MS-2. Properties of Materials (4-credits)

MATERIALS SCIENCE PROJECT WORK-I (4 -credits)

MATERIALS SCIENCE LAB-I(4-credits)

M.Sc. (Physics)-Part-II (Semester-IV)

- MS-3. Special Materials(4-credits)
- MS-4. Nanostructured Materials(4-credits)

MATERIALS SCIENCE PROJECT WORK-II (4-credits)

MATERIALS SCIENCE LAB-I I (4-credits)

Group-III (MODERN OPTICS) (Total 16-creadits)

M.Sc. (Physics)-Part-II (Semester-III) MO-1. Laser Physics(4-credits)

MO-2. Nonlinear Optics and Fiber Optics(4-credits)

MODERN OPTICS PROJECT WORK-I (4-credits)

MODERN OPTICS LAB-I (4-cre dits)

M.Sc. (Physics)-Part-II (Semester-IV)

MO-3. Molecular spectroscopy(4-credits) MO-4. Holography and Its applications (4-credits)

MODERN OPTICS PROJECT WORK-I I (4-credits)

MODERN OPTICS LAB-II (4-cred its)

Group-IV (SPACE PHYSICS) (Total 16-creadits)

M.Sc. (Physics)-Part-II (Semester-III)

SS-1. Stellar Evolution: Birth, Evolution and Death of the Stars (4-credits)

SS-2. Astrophysics of the Sun(4-credits)

SPACE PHYSICS PROJECT WORK–I (4-credits)

SPACE PHYSICSLAB–I(4-credits)

M.Sc. (Physics)-Part-II (Semester-IV)

SS-3. Magnetospheric Plasma Dynamics (4-credits)

SS-4. Ionospheric and Space Weather (4-credits)

SPACE PHYSICSPROJECT WORK-II (4-credits)

SPACE PHYSICSLAB–II (4-credits)

Group–V (SOLID STATE PHYSICS) (Total 16-creadits)

M.Sc. (Physics)-Part-II (Semester-III)

SSP-1. Thin solid films: Deposition and properties(4-credits) SSP-2. Semiconductor Physics (4-credits)

SOLID STATE PHYSICS PROJECT WORK–I (4-cr edits)

SOLID STATE PHYSICS LAB–I (4-credits)

M.Sc. (Physics)-Part-II (Semester-IV)

SSP-3. Physical Properties of Solids (4-credits) SSP-4. Energy Conversion and Storage Devices (4-credits)

SOLID STATE PHYSICS PROJECT WORK-II (4-c redits)

SOLID STATE PHYSICS LAB-II (4-credits)

Group-VI (THEORETICAL PHYSICS) (Total 16-creadits)

M.Sc. (Physics)-Part-II (Semester-III)

Syllabus for M. Sc. (Physics) Choice Base Credit System (Under Academic Flexibility Scheme)

TH-1. Fundamentals of Plasma Physics (4-credits)

TH-2. Introduction to General Relativity (4-credits)

THEORETICAL PHYSICS PROJECT WORK-I (4-credits)

THEORETICAL PHYSICS LAB-I (4-credits)

M.Sc. (Physics)-Part-II (Semester-IV)

TH-3Interaction of electromagnetic waves with electron beams and plasmas (4 credits)

TH-4. Introduction to Quantum Field Theory (4-credits)

THEORETICAL PHYSICS PROJECT WORK-II (4-credits)

THEORETICAL PHYSICS LAB-II (4-credits)

Paper Code: CP-IX Total Credits: 4-credits Paper title: Nuclear and Particle Physics

Unit-I Nucleon-Nucleon Interaction:

Nature of the nuclear forces, form of nucleon-nucleon potential, Deuteron problem: The theory of ground state of deuteron, excited states of deuteron, n-p scattering at low energies (cross-section, phase shift analysis, scattering length, n-p scattering for square well potential, effective range theory); p-p scattering at low energies (cross-section, experiment , and results) ; exchange forces, tensor forces; high energy N-N scattering (qualitative discussion only of n-p and p-p scatterings), charge-independence and charge-symmetry of nuclear forces.

Evidences for shell structure, single-particle shell model, its validity and limitations, collective model: collective vibration and collective rotation, single particle motion in a deformed potential

Unit-III Nuclear Reactions:

Elementary ideas of alpha, beta and gamma decays and their classifications, characteristics, selection rules and basic theoretical understanding. Nuclear reactions, reaction mechanism, Compound nucleus reaction (origin of the compound nucleus hypothesis, discrete resonances, continuum states), optical model of particle-induced nuclear reaction and direct reactions (experimental characteristics, direct inelastic scattering and transfer reactions). Fission and fusion, Fission and heavy ion reactions.

Unit-IV Particle Physics: (15) Classification of fundamental forces. Classification of Elementary particles and their

quantum numbers (charge, spin, parity, isospin, strangeness, etc.). Gellmann-Nishijima formula. Quark model, CPT invariance. Application of symmetry arguments to particle reactions, Parity non-conservation in weak interaction, Relativistic kinematics.

Reference Books:

- 1. Nuclear and Particle Physics- W.E. Burcham and M.Jobes, (Addison Wesley, Longman, England, 1995).
- 2. Introduction to Particle Physics- M.P. Khanna (Prentice Hall, India, 1999).
- 3. Concept of Nuclear Physics, B.L. Cohen, (Tata McGraw-Hill, 2005)
- 4. Nuclear Physics Principles and Applications, John Lilley, (John Wiley and Sons (Asia) 2001)
- 5. Nuclear physics D. C. Tayal. (Himalaya Publishing House, 1997)
- 6. Nuclear Physics- Iriving Kaplan (Narosa, Madras, 1989).
- 7. Introduction to High Energy Physics- Donald H.Perkins (Addison Wesley, Massachusetts, 1982).
- Introduction to Quantum Electrodynamics & Partical Physics D.C.Joshi (I. K. International Publishing House Pvt. Ltd., New Delhi, 2006).

(15)

(15)

(15)

- 9. Fundamentals of Nuclear Physics, Jahan Singh, (Pragati Prakashan, 20012
- 10. The Atomic Nucleus- Robley D. Evans (McGraw-Hill, New York, 1955).

M.Sc. (Physics) (Semester-III) Paper Code: CBP-I Total Credits: 4-credits Paper title: Data Analysis and Statistical Software

Unit-I: Data Analysis

Origin data analysis tools: Analysis Templates[™] for automated analysis, Custom Reports, Consolidated Analysis Reports, Recalculation of analysis results, Analysis Themes, Report Tables, Data selection and masking tools, Standardized analysis tools dialogs,Batch Analysis

Unit-II: Curve Fitting

Linear Regression, Polynomial Regression, Sigmoidal Fitting/Dose Response Curves, Nonlinear Fitter, Fitting Function Builder Fitting with Integral, Fitting Function Organizer, Fit Comparison: Compare models and compare datasets, Implicit function fitting with Orthogonal Distance Regression, Multiple Regression

Tutorials/LAB work (30) (2-credits)

Problems solving and tutorials using origin software

Text and reference books:

- 1. Statistical Data Analysis by Glen Cowan, Oxford Science Publications
- Origin 8 User Guide, OriginLab Corporation, by OriginLab Corporation, First Edition (2007)

3. Introduction to Statistics and Data Analysis by Roxy Peck , Chris Olsen , Jay L. Devore, 3rd addition, 2009

M.Sc. (Physics) (Semester-III) Paper Code: CBP-II Total Credits: 4-credits Paper title: Numerical Computing Using MATLAB (2-credits)

Unit-I Introduction and MATLAB Basics (15)

Platforms and Versions, Installation, Starting MATLAB, Typing in the Command Window, Online Help, MATLAB Window, Ending a Session, Input and Output, Arithmetic, Recovering from problems: Errors in Input, Aborting Calculations, Algebraic or Symbolic Computation: Substituting in Symbolic Expressions, Symbolic Expressions, Variable Precision, and Exact Arithmetic, Vector and Matrices: Vector, Matrices, Suppressing Output, Functions: Built-in Functions, User-Defined Functions, Managing Variables, Variables and Assignments, Solving Equations, Graphics, Graphing with ezplot, Modifying Graphs, Graphing with plot, Plotting Multiple Curves

Unit-II Interacting with MATLAB (15)

The MATLAB Interface: The Desktop, The Workspace, The Current Directory and

Search Path, The Command History Window, M-files: Script M-files, Function M-files, Loops, Presenting your results: Publishing an M-File, Diary Files, Interactive M-files, Wrapping Long Input and Output Lines, Printing and Saving Graphics, M-Books, Fine-tuning your M-files, Suppressing output, Data Classes: String Manipulation, Symbolic and Floating-Point Numbers, Functions and Expressions: Substitution, More about M-Files: Variables in Script M-files, Variables in Functions M-files, Structure of Functions M-files, Complex Arithmetic, More on Matrices: Solving Linear Systems, Calculating Eigenvalues and Eigenvectors, Doing calculus with MATLAB: Differentiation, Integration, Limits, Sums and Products, Taylor Series, Default Variables

Tutorials/LAB work (2-credits)

Algebra, Arithmetic, Calculus and Linear Algebra Problem solving using MATLAB (30)

Text & Reference books:

- 1. A guide to Matlab, B.R. Hunt, R.L. Lipsman, J.M. Rosenberg, Cambridge University Press, 2nd edition, 2006
- 2. Introduction to Numerical Analysis Using MATLAB, By Rizwan Butt
- 3. Users Guide' student edition of MATLAB latest version
- 4. Getting Started with MATLAB 5.0: Rudra Pratap
- 5. Mastering MATLAB 5.0 : d. Hanselman & B. littlefield

M.Sc. (Physics) (Semester-III) Paper Code: CBP-III Total Credits: 4-credits Paper title: Computational Programming using Mathematica

Unit-I: Introduction to Mathematica

Running Mathematica, numerical calculations, calculus in Mathematica, numerical mathematics, graphics-simple plot, parametric plots, contour and density plots, three-dimensional plots, complex numbers, animation, input and output control

Unit-II: Vectors and Matrices in Mathematica

Electric field, Ionic crystals, one, two, three-dimensional crystals, tubing curves, matrices, normal modes- system of two-masse, system of three-masse, system of five-masse normal modes of system of n-masse

Tutorials/LAB work (30) (2-credits)

Problems solving and tutorials using Mathematica

Text and Reference Books:

- 1. Mathematical Methods Using Mathematica: For Students of Physics and Related Fields by Sadri Hassani,(Springer-Verlag) 2003
- 2. The Mthematica Graphics guidebook by comeron smith and Nancy Blachman, Addison-Wesley Publication, 1995

3.

4. Schaum's Outline of Mathematica, 2ed ,(Schaum's Outline Series) by Eugene Don,

M.Sc. (Physics) (Semester-III) Paper Code: ES-1 Total Credits: 4-credits Paper title: ENERGY SCIENCE – I (Renewable Energy Resources)

Unit I Energy and Thermodynamics

Forms of Energy, Conservation of Energy, Entropy, Heat capacity, Thermodynamic cycles: Brayton, Carnot Diesel, Otto and Rankin cycle; Fossil fuels, time scale of fossil fuels and solar energy as an option. (15)

Unit II Solar Energy for Clean Environment

Sun as the source of energy and its energy transport to the earth, Extraterrestrial and terrestrial solar radiations, solar spectral irradiance, solar radiation geometry, Measurement techniques of solar radiations, Estimation of average solar radiation. (15)

Unit III Wind Energy

Origin and classification of winds, Aerodynamics of windmill: Maximum power, and Forces on the Blades and thrust on turbines; Wind data collection and field estimation of wind energy, Site selection, Basic components of wind mill, Types of wind mill, Wind energy farm, Hybrid wind energy systems: wind + PV; The present Indian Scenario. (15)

Unit IV Biomass Energy and Biogas Technology

Nature of Biomass as a fuel, Biomass energy conversion processes, Direct combustion: heat of combustion, combustion with improved Chulha and cyclone furnace; Dry chemical conversion processes: pyrolysis, gasification, types of gasification, Importance of biogas technology, anaerobic decomposition of biodegradable materials, Factors affecting Bio digestion, Types of biogas plants, Applications of biogas. (15)

Reference Books

- 1. Biomass, Energy and Environment- N.H. Ravindranath and D.O Hall, Oxford University Press.
- 2. Solar Energy and Rural development- S.H. Pawar, C.D. Lokhande and R.N. Patil.
- 3. Biomass Energy- S.H. Pawar, L.J. Bhosale, A.B. Sabale and S.K. Goel.
- 4. Solid State Energy Conversion-S.H. Pawar, C.H. Bhosale, and R.N. Patil
- 5. Solar Energy Conversion-A.E. Dixon and J.D. Leslie.
- 6. Advances in Energy systems and technology- Peter Auer.

M.Sc. (Physics) (Semester-III) Paper Code: ES-2 Total Credits: 4-credits Paper title: ENERGY SCIENCE – II

ENERGY SCIENCE - II (Energy Conversion Devices)

Unit 1. Photovoltaic converters (15)

Interaction of solar radiations with semiconductors, photovoltaic effect, types of solar cell, equivalent circuit diagram of a solar cell, determination of series resistance (Rs) and shunt resistance (Rsh), ideal properties of semiconductor for use its solar cell, carrier generation and recombination, dark and illuminated characteristics of solar cell, solar cell output parameters: RL, Voc, Isc, Pm, FF, efficiency, performance dependence of a solar cell on band gap energy, diffusion length and carrier life time, Types of heterojunction, construction of energy band diagram of heterojunctions, origin of capacitance in a heterojunction, expression for junction capacitance, Mott – Schottky relation, problems.

Unit 2: Materials and Solar cell Technology (15)

Single, poly – and amorphous silicon, GaAs, CdS, Cu 2S, CuInSe2, CdTe etc. technologies for fabrication of single and polycrystalline silicon solar cells, amorphous silicon solar cells and tandem cells, solar cell modules, photovoltaic systems, space quality solar cells, problems.

Unit 3: Photochemical Converters (15)

Semiconductor – electrolyte interface, photoelectro chemical solar cells, conversion efficiency in relation to material properties, photoelectrolysis cell, driving force of photoelectrolysis, alkaline fuel cell, semiconductor- septum storage cell, problems.

Unit 4: Thermoelectric Converters (15)

Thermoelectric effects, solid state description of thermodynamic relations, analysis of thermoelectric temperature distribution and thermal energy transfer performance for thermoelectric cooling, problems. Thermoelectric effect, Kelvin's generators, basic assumptions, for generator

Reference Books:

- 1. Solar energy conversion: The solar cell, by Richard C. Neville.
- 2. Photoelectrochemical solar cells Suresh Chandr a
- 3. Solar energy conversion A. E. Dixon and J. D. Leslie.
- 4. Solar cells Martin A.Green
- 5. Heterojunction and metal semiconductor junctio ns A.G. Milnes and D. L. Feucht.
- 6. Solid state electronic devices B.G. Streetman.
- 7. Principles of solar engineering Frank Kreith a nd Janf Kreider.
- 8. Direct energy conversion (4th edition) Stanley W Angrist.
- 9. Handbook of battries and fuel cells Lindsey. D avid

Topics for tutorials:

- 1. Construction of energy band diagram- examples
- 2. Examples on photovoltaic converters
- 3. Maintenance of photovoltaic systems
- 4. Energy bands diagrams for photoelectrochemical and photoelectrolysis cells
- 5. Design of thermoelectric cooler
- 6. Solar energy storage in the form of chemical energy

M.Sc. (Physics) (Semester-III) Paper Code: MS-1 Total Credits: 4-credits Paper title: MATERIALS SCIENCE - I (Imperfections in crystals)

Unit I Point defects (15)Crystalline materials, Defects in crystalline materials: Point Defects, Stacking Faults, Grain Boundaries, Twin Boundaries, Volume Defects. Point defects in metallic and non-metallic crystals, lattice distortion, migration energy, point defects in thermal equilibrium, point defects in ionic crystals, equilibrium concentration of Frenkel and Schottky defects, ionic conductivity, point defects in non-thermal equilibrium.

Unit II Dislocations

Concept of dislocation, Dislocations and non-uniform slip, Edge dislocation, Screw dislocation, Curved dislocation line on plane slip surface, Effect of atomic structure on the form of a dislocation: Peierls-Nabarro theory, Central force approximation, Bubble model, Directional bonds, Form of a screw dislocation. Cottrell atmosphere, imperfect or partial dislocations, stacking faults, Lomer Cottrell locks, Thomson tetrahedron, partial dislocations in other crystal structures, multiplication of dislocations, Jogs and their formation, motion of a vacancy jog, measurement of stacking fault energy.

Unit III Diffusion and Solidification

Diffusion : Fick's laws of diffusion, solutions to the diffusion equation, calculation of jump frequency, mechanisms of diffusion, Kirkendal effect and Darken's equations, self-diffusion, diffusion - along grain boundaries.

Solidification: Homogeneous nucleation, heterogeneous nucleation, atomic kinetics, solute manipulation (normal freezing, zone melting & zone refining).

Unit IV Principles and applications of phase diagrams (15)Freezing of a pure metal, Plane-front and dendritic solidification at a cooled surface, Gas porosity and segregation, Directional solidification, Production of metallic single crystals for research, The concept of a phase, The Phase Rule, Stability of phases, Two-phase equilibria, Three-phase equilibria and reactions, Intermediate phases, Limitations of phase diagrams.

Reference Books:

- 2) Introduction to dislocations D. Hull, ELBS (1971)
- 3) Imperfections in crystals Van Burren, North Holland (1960)
- 4) Theory of crystal dislocations F.R.N. Nabarro, Clarendon Press (1968)
- 5) Dislocations in crystals W.T. Read, McGraw Hill (1953)
- 6) Modern physical metallurgy R.E. Smallman, Butterworths (1970)
- 7) Techniques of metal research R.F. Bunshaw, Interscience (1968)
- 8) Modern techniques in metallography D.G. Brandon, Butterworths (1966)
- 9) Introduction to properties of engineering materials K.J. Pascoe, Blackie and Sons, London (1968).
- 10) William F Smith, JavadHashemi, Ravi Prakash, Materials Science and Engineering, Tata-McGraw Hill, 4th Edition
- 11) R. E. Smallman and A. H.W. Ngan, Physical Metallurgy and Advanced Materials (Seventh Edition), Published by Elsevier Ltd, 2007.

(15)

(15)

M.Sc. (Physics) (Semester-III) Paper Code: MS-2 Total Credits: 4-credits Paper title: MATERIALS SCIENCE – II (Properties of Materials)

Unit I: Physical and mechanical properties of the materials (15) Stress Versus Strain (metals, ceramics and glasses, polymers), Elastic Deformation, Plastic Deformation, Hardness, Creep and Stress Relaxation, Viscoelastic Deformation.

Unit II: Thermal Properties

(15)

Thermal expansion, Thermal conductivity, Thermal shock, Specific heat capacity, The specific heat curve and transformations, Free energy of transformation.

Unit III: Electric and magnetic properties

(15)

Electric properties: Electric conductivity, Semiconductors, Hall Effect, Superconductivity, Oxide superconductors.

Magnetic properties: Magnetic susceptibility, Diamagnetism and paramagnetism, Ferromagnetism, Magnetic alloys, Anti-ferromagnetism and ferrimagnetism, Dielectric materials, Polarization, Capacitors and insulators, Piezoelectric materials, Pyroelectric and ferroelectric materials.

Unit IV: Optical Properties

(15)

Optically active materials, Reflection, absorption and transmission effects, optical fibers, ceramic windows, electro-optic ceramics.

M.Sc. (Physics) (Semester-III) Paper Code: SSP-1 Total Credits: 4-credits Paper title: SOLID STATE PHYSICS- I (Thin solid films: Deposition and properties)

Unit 1: Physical methods of thin film deposition (15)

Vacuum deposition apparatus: Vacuum systems, substrate deposition technology, substrate materials, substrate cleaning, masks and connections, multiple film deposition, Thermal Evaporation methods: Resistive heating, Flash evaporation, Arc evaporation, laser evaporation, electron bombardment heating, Sputtering: Introduction to sputtering process and sputtering variants, glow discharge sputtering, Magnetic field assisted (Triode) sputtering, RF Sputtering, Ion beam sputtering, sputtering of multicomponent materials

Unit 2: Chemical methods (15)

Chemical vapor deposition: Common CVD reactions, Methods of film preparation, laser CVD, Photochemical CVD, Plasma enhanced CVD, Chemical bath deposition: ionic and solubility products, preparation of binary semiconductors, Electrodeposition: Deposition mechanism and preparation of compound thin film Spray pyrolysis : Deposition mechanism and preparation of compound thin films, Chemical bath deposition, successive ionic layer adsorption reaction method (SILAR) method, Sol-gel method, Hydrothermal method

Unit 3: Nucleation growth processes and thickness measurement (15)

Condensation process, Langmuir-Frenkel theory of condensation, Theory of nucleation and growth process, Thickness measurements:Electrical methods, Microbalance monitors, mechanical method, radiation absorption and radiation emission methods, optical interference methods: photometric method, spectrometric method, interference fringes, X-ray interference fringes

Unit 4: Properties and characterization of thin films(15)

Mechanical properties of thin films: Introduction to elasticity, plasticity and mechanical behavior, Electrical and magnetic properties of thin films: Introduction to electrical properties of thin films, Optical properties of thin films: optical constant in thin films, Structural characterization: X-ray diffraction, scanning electron microscopy, chemical characterization: Introduction, Electron spectroscopy, X-ray Energy Dispersive Analysis(EDX),Auger Electron spectroscopy (AES),X-ray photoelectron spectroscopy (XPS)

- 4. Physics of Thin Films by LudmilaEckertová, Springer (1986)
- 5. Thin Film Technology by O S Heavens, Methuen young books (1970) (1970)

UNIT I : Energy Bands and Charge Carriers in Semiconductors: (15)

Bonding forces and energy bands in solids, Direct and Indirect semiconductors, variation of energy bands with alloy composition, Charge carriers in semiconductors: electrons and holes, effective mass, intrinsic and extrinsic materials, electrons and holes in quantum wells, The Fermi level, carrier concentration at equilibrium, temperature dependence, space charge neutrality, conductivity and mobility, Drift and resistance, effects of temperature and doping on mobility, High field effects.

UNIT II: Excess Carriers in Semiconductors: (15) Optical absorption, Luminescence, Direct recombination of electrons and holes, Indirect recombination and trapping, steady state carrier generation and Quasi Fermi levels, Diffusion processes, Diffusion and Drift of carriers, built-in fields, The continuity equation, steady state carrier injection, diffusion length, The Haynes-Shockley experiment.

UNIT III: Junctions-I

Fabrication of p-n junctions; Thermal oxidation, diffusion, Rapid thermal processing, Ion implantation, CVD, Photolithography, etching, metallization, The contact potential, Space charge at a junction, qualitative description of current flow at a junction, reverse-bias breakdown, Zener and Avalanche breakdown.

(15)

(15)

UNIT IV: Junctions-II

Capacitance of p-n junctions, the Varactor diode, recombination and generation in the transition region, ohmic losses, graded junctions, schottky barriers, rectifying contacts, ohmic contacts, heterojunctions, AlGaAs-GaAs heterojunction.

M.Sc. (Physics) (Semester-III) Paper Code: MO-1 Total Credits: 4-credits Paper title: MODERN OPTICS – I (Laser Physics)

Unit I:Laser fundamentals

Properties of laser beams, Attainment of population inversion, Line shape function, Laser modes. Optical pumping efficiency, pump energy distribution within active material, electrical pumping, Pumping rate equations, excitation by resonant energy transfer, Plane – parallel resonator, concentric resonator, confocal resonator, resonators using a combination of plane and spherical mirrors, confocal resonator

(15)

(15)

(15)

(15)

Unit II: Laser Behaviour

Continuous wave laser behavior: Rate equations in 3 level and 4 level laser systems, CW behavior, Optimum output coupling, limit to monochromaticity and frequency pulling. Transient laser behavior: Step- pump pulse, single mode oscillation, multimode oscillation, Q – Switching, methods of Q – switching, Mode locking, methods of Mode locking.

Unit – III: Gas Lasers:

Process of excitation and de-excitation in gas lasers, Neutral-Atom gas laser, Ion lasers, Metal Vapour laser: construction of metal vapour lasers, Energy levels an penning/ ionization in He-Cd and He-Se lasers, Molecular gas lasers: Energy levels of molecules, Vibrational – Rotational lasers: CO_2 –laser system, construction and working of CO_2 laser, Different types of CO_2 lasers, Vibronic lasers: Construction and working of N2 laser, Excimer laser.

Unit – IV : Solid State Lasers and Applications:

The Ruby laser, Nd: YAG laser, Nd: Glass lasers. Characteristics of Dye lasers, Rate equations for Dye lasers, Chemical lasers: H2, F2 mixture and DF, CO2 mixture lasers. Characteristics of Semiconductor laser, CW – Room temperature lasers

Applications of lasers: Applications in pure science, applied science, Industrial Applications, optical communication. optical data processing

7. L. Taroso, Laser Physics and Applications.

M.Sc. (Physics) (Semester-III) Paper Code: MO-2 Total Credits: 4credits Paper title: MODERN OPTICS – II (Nonlinear Optics and Fiber Optics)

Unit – I: Nonlinear Medium:

(15)

Maxwell's equations in nonlinear media, Nonlinear polarization and susceptibilities, classical model of nonlinearity: anharmonic oscillator and free electron gas. Electro-optical and magneto-optical effects, Optical rectification, Induced magnetization.

Unit – II: Nonlinear Phenomena and Applications (15)

Second Harmonic Generations – Polarization waves, phase matching conditions, coherencelength, Coupled wave equations, Parametric amplification and oscillation, Optical phaseconjugation, Self – Self focusing of laser beam – physical description, elementary analysis,Parabolic wave equation and solution for slowly conversing/ diverging beam. Tunablecoherence radiation source, spectroscopy tools.

Unit – III: Optical fibers :(15)

Physical description, numerical aperture, attenuation in optical fibers, pulse dispersion, Loss mechanism, step index and graded index fibers, material and fabrication, lightpropagation (ray theory), Transmission losses, Nonlinear Optical effects in fiber

Unit – IV: Optical Fiber Waveguide and Applications: (15)

E.M. theory of propagation, Modes of fiber, Modes cut-off, Single and multimode fibers, Modal analysis of step index and graded index fibers, Signal distortion – inter modal, material and wave guide dispersion,. Detectors for optical fiber, communication, Optical fibers in Telecommunications and Sensor systems.

M.Sc. (Physics) (Semester-III) Paper Code: SS-1 Total Credits: 4-credits Paper title: Space Physics-I (Stellar Evolution: Birth, Evolution and Death of the Stars) Total Credits: 4-credits

Unit-I: Formation of the Stars (15)Interstellar Medium-nebulae, extinction and reddening, interstellar absorption lines, radio observations of the interstellar medium, Birth of Stars-contraction and heating, protostar, star formation confirmed, T-Tauri stars, Herbig-Haro objects, bipolar flow, Sources of Stellar Energy- solar energy generation, proton-proton chain, solar neutrino mystery, hydrogen fusion in star, CNO-cycle, energy transport, hydrostatic equilibrium, the pressure-temperature thermostat Unit-II: Stellar Evolution

(15)H-R diagram, Main Sequence Stars-stellar models, end of main sequence, the massluminosity relation, life of main sequence star, post main sequence star evolutionexpansion into giant, helium fusion, fusion of elements heavier than helium, Variable Stars-Cepheid variables, pulsating stars, Star Cluster-observing star cluster, stellar evolution confirmed, open cluster and globular cluster

Unit-III: Death of the Stars

(15)Lower Main Sequence stars-Red Dwarfs, Sun-like stars, Mass loss from stars, planetary nebulae, white dwarfs, black dwarf Chandrasekhar Limit, Upper Mainevolution of upper main sequence stars-hydrogen, helium carbon core formation, carbon detonation, the iron core, supernova, observations of supernova, type-I and Type-II supernova, supernova remnant, synchrotron radiation, Evolution of Binary Stars-Mass transfer, recycled stellar evolution, accretion disks

Unit-IV: Neutron Stars and Black Holes

(15)

Neutron stars, properties of neutron stars, Pulsars, Pulsar model, the evolution of Pulsars, binary Pulsars, quasi-periodic objects, bursters, black holes-escape velocity, Schwarzschild Black holes, Schwarzschild radius, Kerr black holes, leaping in, time dilation, gravitational red shift, search for black holes

M.Sc. (Physics) (Semester-III) Paper Code: SS-2 Total Credits: 4-credits Paper title: Space Physics-II (Physics of the Sun) Total Credits: 4-credits

Unit-I: The Sun(15)Characteristics of the Sun, internal structure, solar observations, solar atmosphere,
oscillations, Convection, rotation, magnetism, chromosphere, corona, solar wind,
quiet, Sun, Active Sun, Helioseismology
Unit-II: The Sun and its Emissions(15)Solar electromagnetic radiations-radio, far IR,IR-Visible, UV, extreme UV, X-ray
(soft and hard), solar cycle and solar variability, magnetic field energy-solar flares
and coronal mass ejections(15)

Unit-III: The Sun and its Magnetohydrodynamics (15) Introduction, the sun, role of solar magnetic field, MHD equilibria, waves and instabilities, solar activities, prominences, coronal heating, solar flares, coronal mass ejections

Unit-IV: The Solar wind and its interactions with magnetized planets (15) solar energetic particles-solar wind, Properties of solar wind, origin of solar wind, magnetic structure of the corona and solar wind, major time dependent disturbances of solar wind, planetary magnetic fields, Size of magnetic cavity, shape of magnetic cavity, self-consistent models, flow around the magnetosphere

Reference Books:

- 4. Introduction to Space Physics by Margaret G. Kivelson (Editor), Christopher T. Russell (Editor)
- 5. Magnetohydrodynamics of the Sun, By Eric Priest, Cambridge University Press, June 2014
- 6. Advanced Magnetohydrodynamics: With Applications to Laboratory and Astrophysical Plasmas by J. P. Goedbloed, RonyKeppens, StefaanPoedts
- 7. Elements of space physics by R. P. Singhal, PHI learning Private limited, Delhi
- 8. Fundamentals of Solar Astronomy by Arvind Bhatnagar and William Livingston, World Scientific (2005)

Unit I

Introduction

Occurrence of Plasmas in Nature, Definition of Plasma, Concept of Temperature, Debye Shielding, The Plasma Parameter, Criteria for Plasmas, Applications of Plasma Physics.

Single-Particle Motions

Introduction, Uniform E and B Fields, Non-uniform B Field, Non-uniform E Field, Time-Varying E Field, Time-Varying B Field, Summary of Guiding Center Drifts, Adiabatic Invariants.

Unit II

Plasmas as Fluids

Introduction, Relation of Plasma Physics to Ordinary Electromagnetics, The Fluid Equation of Motion, Fluid Drifts Perpendicular to B, Fluid Drifts Parallel to B, The Plasma Approximation.

Waves in Plasmas

Representation of Waves, Group Velocity, Plasma Oscillations, Electron Plasma Waves, Sound Waves, Ion Waves, Validity of the Plasma Approximation, Comparison of Ion and Electron Waves, Electrostatic Electron Oscillations Perpendicular to B, Electrostatic Ion Waves Perpendicular to B, The Lower Hybrid Frequency, Electromagnetic Waves with B₀=0, Experimental Applications, Electromagnetic Waves Perpendicular to B₀,Cutoffs and Resonances, Electromagnetic Waves Parallel to B₀, Experimental Consequences, The Whistler Mode, Faraday Rotation, Hydro-magnetic Waves, Magneto-sonic Waves, Summary of Elementary Plasma Waves, The CMA Diagram

Unit III

Diffusion and Resistivity

Diffusion and Mobility in Weakly Ionized Gases Decay of a Plasma by Diffusion, Steady State Solutions, Recombination, Diffusion Across a Magnetic Field, Collisions in Fully Ionized Plasmas, The Single-Fluid MHD Equations, Diffusion of Fully Ionized Plasmas, Solutions of the Diffusion Equation, Bohm Diffusion and Neoclassical Diffusion.

Equilibrium and Stability

Introduction, Hydro-magnetic Equilibrium, The Concept of β , Diffusion of Magnetic Field into a Plasma, Classification of Instabilities, Two-Stream Instability, The "Gravitational" Instability, Resistive Drift Waves, The Weibel Instability.

Unit IV

Kinetic Theory

The Meaning of f(v), Equations of Kinetic Theory, Derivation of the Fluid Equations, Plasma Oscillations and Landau Damping, The Meaning of Landau Damping, A Physical Derivation of Landau Damping, BGK and Van Kampen Modes, Experimental Verification, Ion Landau Damping, Kinetic Effects in a Magnetic Field.

Nonlinear Effects

Introduction, Sheaths, Ion Acoustic Shock Waves, The Ponderomotive Force, Parametric Instabilities, Plasma Echoes, Nonlinear Landau Damping, Equations of Nonlinear Plasma Physics, Reconnection, Turbulence, Sheath Boundaries.

(15)

(15)

Text Book and Additional References

1. Introduction to Plasma Physics and Controlled Fusion by Francis F. Chen

(3rdSpringer International Edition, 2016).

2.Fundamentals of Plasma Physics by Paul M. Bellan, Cambridge University Press (1st Paperback Edition, 2008).

- 3.Fundamentals of Plasma Physics, by J. A. Bittencourt,(3rd Edition)Springer-Verlag.(2004)

5.Elements of Plasma Physics by S N Goswami (2016)

M.Sc. (Physics) (Semester-III) Paper Code: TH-2 Total Credits: 4-credits Paper title: Theoretical physics-II (Introduction to General Relativity)

Unit-I Special Relativity(15)

Fundamental principles of STR, Inertial observer, Space-time diagrams, Construction of the coordinates used by another observer, Invariance of interval, Invariance of hyperbolae, The Lorentz transformation, The velocity composition law, paradoxes and physical intuition.

Unit-II Vectors and tensors in special relativity(15)

Definition of a vector, Vector algebra, The four-velocity, The four momentum, Scalar product, Applications. The metric tensor, Definition of tensors The (0, 1) tensors: one-forms, The (0,2) tensors, Metric as a mapping of vectors into oneforms, (M,N) tensors, Index raising and lowering, tensor differentiation.

Unit-III Curvature and manifolds(15)

Relation between gravitation and curvature, Tensor algebra and calculus in polarcoordinates, Christoffel symbol and the metric, Noncoordinate bases. Differentiablemanifolds and tensors, Riemannian manifolds, Covariant differentiation,Parallel transport, geodesics and curvature, The curvature tensor, Bianchiidentities: Ricci and Einstein tensors.

Unit-IV Physics in curved spacetime, Einstein field equations

and stellar solutions(15)

The transition from differential geometry to gravity, Physics in slightly curvedspace-times, Curved intuition, Conserved quantities. Purpose and justification of the field equations, Einstein's equations, Einstein's equations for weakgravitational fields, Newtonian gravitational fields. Coordinates for sphericallysymmetric space-times, Static spherically symmetric spacetimes, Static perfectfluid Einstein equations, The exterior geometry, The interior structure of thestar, Exact interior solutions, Realistic stars and gravitational collapse.

- SpacetimeAnd Geometry, Sean Carroll, Pearson Education
- General relativity and Cosmology, JayantNarlikar, Macmillan Press
- Gravity, James Hartle, Pearson Education

ENERGY SCIENCE LAB-I (4-credits)

List of Experiments

- 1. Oxygen bomb Calorimeter
- 2. Wood Pyrolysis-I
- 3. Wood Pyrolysis-II
- 4. Powdery Biomass Gasifier
- 5. Microsoft Excel
- 6. Current Density
- 7. Solar Cell Characteristics
- 8. Sunshine Recorder
- 9. Pyranometer
- 10. Wind Data analysis
- 11. Air mass Ratio
- 12. Underground Resistivity measurement
- 13. Heat pipe
- 14. Biogas Plant
- 15. Vacuum Deposition System
- 16. Spray Pyrolysis System

MATERIALS SCIENCE LAB-I (4-credits)

List of Experiments

- 1. Cooling curves
- 2. Stress-Strain curves
- 3. Average grain diameter by SEM
- 4. Laue diffraction
- 5. Crystal structure
- 6. Preparation of ferrite
- 7. Spectrometry of colored solutions
- 8. Crystal structure of thin film
- 9. Crystal growth from solution
- 10. Ionic conductivity

Tutorials

1 Tutorials will consist of 3-4 experiments based upon syllabi of theory paper of Materials Science.

SOLID STATE PHYSICS LAB -I (4-credits)

List of Experiments

Group I:

- [1] Thin film deposition by SILAR method
- [2] Thin film deposition by electrodeposition method
- [3] Thin film deposition by hydrothermal method
- [4] Thin film deposition by reflux method
- [5] Thin film deposition by dip-coating method
- [6] Thin film deposition by CBD method
- [7] Microwave assisted synthesis of thin film
- [8] Thin film deposition by spray pyrolysis method

Group II:

- [9] Rietveld method of structure refinement
- [10] Calculation of XRD peak positions and intensities
- [11] Thickness measurement of thin film by transmittance spectroscopy
- [12] Electrical resistivity of thin film by 2 probe method
- [13] Thermoelectric power of thin film
- [14] Contact angle measurement of thin film
- [15] Determination of band gap energy of thin film
- [16] Measurement of dielectric constant

MODERN OPTICS LAB-I (4-credits)

List of Experiments

- 1 Michelson's Interferometer
- 2 Talbot's Bands.
- 3 Calibration of Spectrograph.
- 4 Laser beam parameter.
- 5 Iron arc spectra
- 6 Copper arc spectra
- 7 Setting of C.D. spectrograph.
- 8 Mixture analysis.
- 9 Zeeman effect
- 10 Recording of Hologram
- 11 Mathhematica-I
- 12 Recording of FT-NMR Spectra
- 13 UV-Visible spectra of organic material

Tutorials

1. Concerning above list of experiments, it is possible to arrange some expt. With the avaibility of new experimental kits.

SPACE SCIENCE LAB-I (4-credits)

List of Experiments

- 1) Introduction to Python
- 2) Introduction to MatLab
- 3) Proton precession magnetometer
- 4) Amplitude Modulation
- 5) Variable Attenuator
- 6) NavIC-IRNSS: Data Mining and analysis using MatLab
- 7) Total electron content by NavIC-IRNSS
- 8) Solar Data Analysis-I (Electromagnetic)
- 9) Solar Data Analysis-II (Energetic Particle)
- 10) Frequency characteristic of Ku-band
- 11) Beam width of parabolic dish antenna
- 12) Mounting of Telescope
- 13) Solar Data Analysis-III (Sunspots)
- 14) Designing of Yagi Antenna
- 15) Study of Leafy Vegetation
- 16) Beam width of Yagi Antenna & field strength
- 17) X-band characteristics of patch antenna
- 18) Solar Data Analysis-IV (Coronal Holes and Solar wind)

THEORETICAL PHYSICS LAB-I (4-credits)

List of Experiments

List of Experiments

Introduction to Mathematica for Scientists and Engineers (Notebook form in Mathematica Tutorials) (IMSE)

- 1. IMSE Ch1: Introduction
- 2. IMSE Ch2: Functions
- 3. IMSE Ch3: Symbolic Manipulations
- 4. IMSE Ch4: Plots
- 5. IMSE Ch5: Lists, Arrays
- Tutorials

Tutorials from Schaum's Outlines: Mathematica (Eugene Don)

- 1. Getting Acquainted
- 2. Basic Concepts
- 3. Lists
- 4. Two-dimensional Graphics
- 5. Three-dimensional Graphics
- 3. Assignments

M.Sc. (Physics) (Semester-IV) Paper Code: CP-X Total Credits: 4-credits Paper title: EXPERIMENTAL TECHNIQUES

Unit I Vacuum Techniques (B 1 & 2)

Production of low pressures: rotary, diffusion, and sputter ion pumps; measurement of low pressure: McLeod, Pirani, thermocouple & Penning gauges; leak detection : simple methods of LD, palladium barrier and halogen leak detectors.

(15)

Unit II Low Temperature and Microscopy Techniques (B 3 – 8) (15)

Production of low temperatures: Adiabatic cooling, the Joule-Kelvin expansion, adiabatic demagnetization, 3He cryostat, the dilution refrigerator, principle of Pomerunchuk cooling, principle of nuclear demagnetization; measurement of low temperatures. Optical microscopy, scanning electron microscopy, electron microprobe analysis, low energy electron diffraction.

Unit III Atomic Absorption Spectrometry (B 9 – 11)(15)

Fundamentals : principle, basic equipment, operation, monochromator action, modulation; apparatus : double beam instrument, radiation sources, aspiration and atomization; interferences, control of AAS parameters, reciprocal sensitivity and detection limit techniques of measurement : routine procedure, matrix matching method, and method of additions.

Unit IV X-Ray Fluorescence Spectrometry and Mössbauer Spect roscopy (B 11–16) (15)

Introduction to wavelength-dispersive X-ray fluorescence spectrometry (WDXRF) and energy-dispersive X-ray fluorescence spectrometry (EDXRF), dispersive systems, detectors, instruments, matrix effects, XRF with synchrotron radiation. Elementary theory of recoil free emission and resonant absorption of gamma rays, Mös sbauer experiment, hyperfine interactions: chemical isomer shift, magnetic dipole hf splitting, and electric quadrupole hf splitting; line broadening.

Reference Books:

1. High vacuum techniques- J.Yarwood (Chapman & Hall) 1967

- 2. Vacuum technology- A.Roth (North-Holland Publishing Company, Amsterdam) 1982
- 3. Experimental techniques in low temperature physics G.K.White (Oxford) 1968
- 4. Low temperature physics L.C. Jackson

5. Experimental principles & methods below 1K – O.V .Lounasmaa (Academic press, New York) 1974

6. Modern metallography - R.E.Smallman & K.H.G.Ashbee(Peramon press, Oxford)

7. Microscopy of materials - D.K.Bowen & C.R.Hall (the MacMillan press Ltd. (London) 1975; Chap.1-3.

8. Electron optical applications in materials science- L.E. Murr, (McGraw Hill, New York) 1970.

 Atomic absorption spectroscopy - B.Welz (Verlag Chemie, New York) 1976.
Atomic absorption spectroscopy- R.J. Reynolds, K.Aldous & K.C. Thompson (CharlesGriffin and company Ltd. London) 1970.

11. Modern methods for trace element determination- C.Vandecasteele & C.B.Block (John Wiley & Sons, New York) 1993.

12. Principles of instrumental analysis- D.A. Skoog & J.J.Leary (Saunders College publishing) 1992.

13. Mössbauer spectroscopy- N.N.Greenwood & T.C. Gi bb (Chapman & Hall, London) 1971.

14. Spectroscopy, vol.1 – Straughan & Walker (Chapm an& Hall, London) 1976; Chap.5.

15. Mössbauer effect: principles and applications- G.K.Wertheim (Academicpress, New York) 1964.

16. An introduction to Mössbauer spectroscopy - Leo pold May, Edr. (Plenumpress, New York) 1971.

Topics for tutorial:

- 1. Hot cathode gauges
- 2. Gas-probe technique of leak detection
- 3. Simple cryostat designs
- 4. Etching techniques
- 5. Importance of Mössbauer spectroscopy technique.

M.Sc. (Physics) (Semester-IV) Paper Code: CBP-IV Total Credits: 4-credits Paper title: Numerical Methods and Programming

Unit-I Numerical Methods

Methods of determination of zeroes of linear and nonlinear algebraic equations and transcendental equations, convergence of solutions. Solutions of simultaneous linear equations, Gaussian elimination, pivoting, iterative method, Matrix inversion, Eigenvalues and eigenvectors of matrices, Power and

Unit-II Numerical approximation methods

15

15

Jacobi method Finite differences, interpolation with equally spaced and unevenly spaced points, Curve fitting, Polynomial least squares and Cubic Spline fittingnumerical approximation methods, Newton-Cotes Formulae, error estimates, Gauss methods. Random variates,

Unit-III Numerical differentiation and integration

Monte Carlo evaluates of integrals, Methods of importance sampling, Random walk and metropolis method, Numerical solution of ordinary differential equation, Euler and Runge Kutta methods, Predictor and corrector methods. Elementary ideas of solutions of partial differential equations.

Unit-IV Fortran

Digital computer principles, Compliers, Interpreters, operating systems., Fortran programming, Flow Charts, Integer and Floating Point Arithmatic, Expressions, Built-in Functions, executable and non-executable statements, assignment, Control and input-output elements, Subroutines and functions, operation with files.

Text and References Books Sastry : Introductory methods of Numerical Analysis Rajaraman : Numerical Analysis Rajaraman : Fortran Programming Vetterming, Teukolsky, Press and Flannery: Numerical Recipes

The problems given in the text and reference books will form Tutorial course

M.Sc. (Physics) (Semester-IV) Paper Code: CBP-V Total Credits: 4-credits Paper title: MATLAB Programming and applications

Unit-I MATLAB Graphics (15)

Two-Dimensional Plots: Parametric Plots, Contour Plots and Implicit Plots, Field plots, Three-Dimensional Plots: Curves in Three-Dimensional Space, Surfaces in Three-Dimensional Space, Figure Windows: Multiple Figure Windows, The Figure Toolbar, Combining Plots in One Window, Customizing Graphics: Annotation, Change of Plot Style, Full-Fledged Customization, Images, Animations, and Sound: Images, Animations, Sound Unit-II MATLAB Programming (15)

Branching: Branching with if, Logical Expressions, Branching with switch, More about Loops: Open-Ended loops, Braking from a Loop, Other Programming Commands: Subfunctions, Cell and Structure Arrays, Commands for Parsing Input and Output, Evaluation and Function Handles, User Input and Screen Output, Debugging, Interacting with the Operating System: Calling External Programs, File Input and Output

Tutorials/LAB work (30) (2-credits)

Programming and graphics problem solving using MATLAB

Text & Reference books:

- 1. A guide to Matlab, B.R. Hunt, R.L. Lipsman, J.M. Rosenberg, Cambridge University Press, 2nd edition, 2006
- 2. Introduction to Numerical Analysis Using MATLAB, By Rizwan Butt
- 3. Users Guide' student edition of MATLAB latest version
- 4. Getting Started with MATLAB 5.0: Rudra Pratap
- 5. Mastering MATLAB 5.0 : d. Hanselman & B. Littlefield

M.Sc. (Physics) (Semester-IV) Paper Code: CBP-VI Total Credits: 4-credits Paper title: Electronic Devices

Unit 1 Transistors and Microwave Devices: (15)

Bipolar junction transistor (BJT), frequency response and switching of BJT, Field effect transistor (JFET), MOSFET and related devices, MESFET device structure and its operation, Tunnel diode, Transferred electron devices and Gunn diode, Avalanche transit time diode and IMPATT diode.

Unit 2 Photonic Devices: (15)

Radiative transitions and optical absorption, Light emitting Diodes, OLED, Infrared LED, Photodetector, Photoconductor, Photodiode, p-n junction Solar cells, Conversion efficiency, Semiconductor Lasers, Laser operation, population inversion, carrier and optical confinement, optical cavity.

Unit 3 Memory Devices: (15)

Semiconducting memories, memory organization and operation, Read and Write operation, Expanding memory size, Classification and characteristics of memories, Static and dynamic RAM, SRAM and DRAM, Charge couple memory (CCD) Devices, Magnetic, optical and ferroelectric memory devices,

Unit 4 Other electronic Devices: (15)

Magneto-optic and acousto-optic effects, Material's properties related to get these effects, Piezoelectric, Electrostrictive and magnetostrictive effects, important materials exhibiting these properties and their applications in sensors and actuator devices.

Reference Books:

- 1. Semiconductor devices: Physics and Technology 2nd Edition, S. M. Sze
- 2. Modern Digital Electronics, R. P. Jain
- 3. Introduction to Semiconductor devices by M. S. Tyagi
- 4. Optical electronics by Ajoy Ghatak and K. Thyagrajan, Cambridge University Press.

Paper Code: ES-3 Total Credits: 4-credits Paper title: EXPERIMENT ENERGY SCIENCE-III. The New Energy Technologies

Unit I Environmental Impacts of Renewable Energy Sources

Energy flow diagram to the earth, Carbon cycle, Ecological Niche, Green house effect. Energy Consumption in India, Environmental degradation due to conventional energy production and utilization: Asian Brown Cloud Effect, Environmental impacts of Biomass energy, solar energy systems, wind energy and ocean thermal energy. Power co-generation.

(15)

Unit II Hydrogen as clean source of Energy

Sources of hydrogen, Thermodynamics of water splitting, Hydrogen production methods, Photoelectrolysis of water, Direct decomposition of water, Thermochemical production of hydrogen; Hydrogen storage methods: Conventional, Liquid Hydrogen storage, Metal Hydrides, and Cryo-adsorbing storage. (15)

Unit III Superconductors and Fuel Cell Technology

Cuprates and MgB2 superconductors and their properties, superconducting wires, Role of superconductor in Electric generator, Magnetic energy storage devices and power transmission. Working principle of fuel cell, Components of fuel cell, EMF of fuel cell and polarization in fuel cells, Types of fuel cells, Advantages and disadvantages of fuel cell, Power generation with fuel cells. (15)

Unit IV Batteries and Supercapacitors

Energy storage systems, Faradaic and non-Faradaic processes, Types of capacitors and batteries, Comparison of capacitor and battery, Chargedischarge cycles, experimental evaluation using Cyclic voltammetry, and other techniques, Energy and entropy stored by capacitor, Electrochemical behaviour of RuO2, IrO2, and mixed oxides, Energy density and power density, Applications for electric vehicle drive systems. (15)

Reference Books

- 1) Biological paths to self reliance- Russell E. Anderson.
- 2) Encyclopedia of Environmental Energy Resources- G.R. Chhatwal Vol. 1 & 2.
- 3) Renewable Energy Sources and their Environmental Impacts- S.A. Abbasi & N. Abbasi.
- 4) Electrochemical supercapacitors by B. E. Conway, Kluwer Academic Press.
- 5) Hydrogen as an Energy Carrier- T. Carl-Jochen Winter, Joachim Nitsch (eds.)
- 6) Advances in Renewable Energy Technologies- S.H. Pawar, and L. A. Ekal (eds.)
- 7) Handbook of Batteries and Fuel Cells- David Linden.

M.Sc. (Physics) (Semester-IV) Paper Code: ES-4 Total Credits: 4-credits Paper title: ENERGY SCIENCE – IV (Solar Thermal Devices)

Unit 1: Principles of heat transfer (15)

Conduction: plane wall, multiplayer wall, cylinders and spheres, thermal conductivity of

solid, liquid and gas, convection: free and forced convections, heat transfer through plane wall, radiation: characteristics of radiation, secular and diffuse reflections, gray surfaces, radiation function table, radiation exchange between two parallel gray surfaces, radiation characteristics and properties of materials, heat exchangers, double pipe heat exchangers, expression for effectiveness, methods to obtain rate of heat transfer in heat exchangers: LMTD and ENTU, flow and convection heat transfer in forced beds, problems.

Unit 2: Flat Plate Collectors (15)

Selective surfaces its characteristics and examples, energy balance equation for flat plate collector, thermal analysis of a flat plate collector, efficiency of flat plate collector, solar cookers, solar thermal systems for various applications, solar dryers and industrial products, problems.

Unit 3: Concentrating solar energy collectors (15)

Reasons for using concentrating collectors, thermodynamic limits to concentration, optical limits to concentration, various types of concentrators, compound parabolic concentrators (CPC) and its thermal analysis, tracking of the sun, continuously tracking solar concentrators.

Unit 4: Solar pond (15)

Basic principle of operation of solar pond, theoretical analysis of solar pond, extraction of heat from solar pond, types of solar pond ,applications of solar ponds, problems.

Reference Books:

- 1. Principles of solar engineering by Frank Kreith and Janf Kreider.
- 2. Solar energy conversion, A. E. Dixon & J. D. Leslie
- 3. Solar Energy Engineering, A. A. M. Sayigh
- 4. Solar energy by Sukhatme
- 5. Solar energy utilization by G.D.Rai
- 6. Selective surfaces by O.P. Agnihotri

Topics for tutorials:

- 1. Methods to obtain selective surfaces
- 2. Examples on determination of rate flow of heat
- 3. Maintenance of flat plate collector based devices
- 4. Derivation of efficiency of CPC
- 5. Maintenance of solar ponds

M.Sc. (Physics) (Semester-IV) Paper Code: MS-3 Total Credits: 4-credits Paper title: Material Science – III (Special Materials)

Unit I Composite materials

Introduction, Reinforcing materials for fibrous composites, Manufacture of fibre composites, Elastic properties of a composite, Strength of a fibre composite, Specific stiffness and specific strength, Toughness of fibre composites, Fracture toughness of polyblends.

(15)

(15)

(15)

(15)

Unit II Glasses

Glasses: Types of glasses, role of oxides in glasses, glass transition temperature, optical properties of glasses, electrical properties of glasses, electronically conducting glasses, special glasses, metallic glasses.

Unit III Functional Materials

Nanophase materials:Introduction, synthesis and techniques, Nucleation and growth mechanism, Characterization of Nanostructured materials, properties of Nanophase Materials, Applications.

Advanced Ceramics: Introduction, Classification of Ceramics, Structure of the Ceramics, Ceramic Processing, Properties of Ceramics, Applications.

Polymer Materials: Introduction, Polymerization Mechanism, Degree of Polymerization, Classification of Polymers, Structures of polymer and preparation methods, important properties and applications of commercial polymers-vizpolyethylene. Polyvinylchloride, Polystyrene, Nylon, Polyesters, Silicones, Composites, Composite material including nanomaterials

Unit IV Ferroelectrics, Piezoelectrics and Pyroelectrics

Ferroelectrics: Ferroelectric phenomena, Representative crystal, types of ferroelectrics: Properties of Rochelle salt, BaTiO3, Theory of ferroelectric displacive transitions, Thermodynamic theory, Ferroelectric and antiferroelectric transition, Formation and dynamics of ferroelectric domains, Experimental evidence of domain structure, Applications of ferroelectric materials, Piezoelectrics: Piezoelectric phenomena, Phenomenological approach to piezoelectric effects, Piezoelectric parameters and their measurements, Piezoelectric materials and their applications.Pyroelectrics: Pyroelectric parameters and their measurements, Phenomenological approach to pyroelectric effects, Piezoelectric effects, Pyroelectric parameters and their Measurements, Phenomenological approach to pyroelectric effects, Pyroelectric parameters and their Measurements, Phenomenological approach to pyroelectric effects, Pyroelectric parameters and their Measurements, Phenomenological approach to pyroelectric effects, Pyroelectric parameters and their Measurements, Phenomenological approach to pyroelectric effects, Pyroelectric parameters and their Measurements, Phenomenological approach to pyroelectric effects, Pyroelectric parameters and their Measurements, Pyroelectric materials, NTC and PTC materials, Applications of pyroelectric materials.

Reference Books:

- 11) Materials Science and Engineering: Callister S.

M.Sc. (Physics) (Semester-IV) Paper Code: MS-4 Total Credits: 4-credits Paper title: MATERIALS SCIENCE – IV (Nanostructured Materials)

Unit I Material Synthesis and Characterization (15) Material Synthesis: Physical Methods: Introduction, methods based on evaporation, sputter deposition, chemical vapor deposition, electric arc deposition, electrodeposition, ion beam technique, molecular beam epitaxy. Chemical Methods: Introduction, colloids and colloidal solutions, growth of nanoparticles, synthesis of metal and semiconductor nanoparticles by colloidal route, microemulsion, sol-gel method.

Material Characterization: Analysis by XRD, XPS, SEM/FESEM, NMR, FT-IR, UV-Vis, Raman Spectroscopy, AFM, TEM, TG-DTA, Contact angle measurement.

Unit II Properties and Applications of Nanostructured Materials (15) Properties: Mechanical properties, structural properties, melting of nanoparticles, electrical conductivity, optical and magnetic properties.

Applications: Electronics, energy, automobiles, sports and toys, textile, cosmetic, domestic appliances, space and defence, nanotechnology and environment.

Unit III Biomaterials

Biomaterial requirements, Dental materials, bore materials, Reconstructive surgery materials, Drug delivery system, Carbon Nanomaterials as Nanocarriers for Drug Delivery: Concepts and Challenges, Delivery of Anticancer Drugs

Unit IV Environmental and Social issues of Materials Science (15) Economics of materials, Recycling issue of materials science, World banned materials, Salty of hazards materials, Nanomaterials and health, Nanomaterials and the environment, Sustainable nanomanufacturing and green nanotechnology, Societal and ethical considerations.

(15)

M.Sc. (Physics) (Semester-IV) Paper Code: SSP-3 Total Credits: 4-credits Paper title: SOLID STATE PHYSICS- III (Physical properties of solid) Unit 1: Electronic Structure of Crystals (15)

Basic assumptions of Model, Collision or relaxation times, DC electrical conductivity, Failures of the free electron model, The tight-binding method, Linear combinations of atomicorbitals, Application to bands from s-Levels, General features of Tight-binding levels, Wannier functions, Other methods for calculating band structure, Independent electronapproximation, general features of valence band wave functions, Cellular method, Muffin Tin potentials, Augmented plane wave (APW) method, Green's function (KKR) method, Orthogonalized Plane Wave (OPW) method Pseudopotentials

Unit 2: Transport Properties of Metals (15)

Drift velocity and relaxation time, The Boltzmann transport relation, The Sommerfeld theoryof metals of electrical conductivity, The mean free path in metals, Thermal scattering, Theelectrical conductivity at low temperature, The thermal conductivity of metals, DielectricProperties of insulators, Macroscopic electrostatic Maxwell equations, Theory of Local Field, Theory of polarizability, Clausius- Mossotti relation, Long- wavelength optical modes inIonic crystals.

Unit 3: Phonons, Plasmons, Polaritons, and Polarons (15)

Vibrations of monatomic lattices: first Brillion zone, group velocity, Long wavelength limit, Lattice with two atoms per primitive cell. Quantization of lattice vibrations, Phonon momentum Dielectric function of the electron gas, Plasma optics, Dispersion relation for Electromagnetic waves, Transverse optical modes in a plasma, Longitudinal Plasma oscillations, Plasmons, Polaritons, LST relations, Electron- electron interaction, Electron phonon interaction: Polarons,

Unit 4: Defects in crystals (15)

Thermodynamics of point defects, Schottky and Frenkel defects, annealing, electrical conductivity of ionic crystals, color centers, Polarons and exciton, dislocations, strength of crystals, crystal growth, stacking faults and grain boundaries

Reference Books:

1. Solid State Physics by N W Ashcroft and N D Mermin, HRW, International editions (1996) (Units 1, 2 and 3)

2. Introduction to Solid State Physics by C Kittle (4th edition) John Willey Publication (1979) (Units 3)

3. Solid State Physics by A J Dekker ((1986) Macmillan India Ltd

UNIT I: Solar Photovoltaics

P-N junction under illumination, Light generated current, I-V equation, Characteristics, Upper limits of cell parameters, losses in solar cells, equivalent circuit, effects of various parameters on efficiency, Solar cell design, Design for high Isc, Antireflective coating (ARC), Design for high Voc and fill factor, Analytical techniques; solar simulator, Quantum efficiency, Minority carrier life time and diffusion length measurement. Thin film solar cells: Advantages, materials, a-Si, CdTe, CIGS

(15)

(15)

(15)

UNIT II: Dye and Quantum Dot Sensitized Solar Cell (15)

Dye sensitized solar cells: - Operation, Materials and their properties, Advantages and Disadvantages

Quantum dot sensitized solar cells: - What is quantum dot? Tuning the electronic properties of Quantum dot, Operation, Materials and their properties, Advantages and Disadvantages

UNIT III: Perovskite and Organic Solar cell

Pervoskite sensitized solar cells: - Crystal Structure and Related Properties, Opto-electronic Properties, Device Structures, operation and Performances

Organic Photovoltaic Materials: - Organic Photovoltaic Materials properties, Principles of Operation and Device Concepts, Stability and Performance

UNIT IV: Supercapacitors and Batteries:-

Supercapacitor:

Comparison between capacitor, supercapacitor and battery; Capacitor principle, Types of capacitors; Electrochemical capacitor: Introduction,Ragone plot, Charge-discharge of supercapacitor and battery; Electric double layer capacitor: electrode-electrolyte interfaces (models), construction, advantages and disadvantages; pseudocapacitor: electrochemical pseudocapacitor of electrode-electrolyte interface; electrochemistry of pseudocapacitor: underpotential, Redox, Intercalation; Electrode material, Ruthenium oxide. Introduction to Li-Ion battery, Introduction to fuel cell.

M.Sc. (Physics) (Semester-IV) Paper Code: MO-3 Total Credits: 4-credits Paper title: MODERN OPTICS – III (Molecular Spectroscopy)

Unit I: Basics of molecular spectroscopy

Molecular Structure and Molecular Spectra Covalent, ionic and van der Waal bonding, Valence bond and molecular orbital approach for molecular bonding and electronic structure of homonuclear diatomic molecules, pairing and valency, heteronuclear diatomic molecules, hybridization, ionic bonding, electro-negativity, electron affinity. Electronic spectra of diatomic molecules – Born-Oppenheimerapproximation, Electronic structure of polyatomic molecules: hybrid orbitals, bonding in hydrocarbons.

Unit II: Absorption and Luminescence spectroscopy

UV/Visible Molecular Absorption Spectroscopy: Optical absorption: Free carrier absorptionoptical transition between bands-direct, and indirect-excitons, Beer's law and its limitations.

Instrumentation: sources; single and double beam spectrometers; Solvent-effects; Bathochromic

and Hypsochromic shifts; Assignment of σ and π transitions.

Molecular Luminescence Spectroscopy

Luminescence in crystal - excitation and emission – decay mechanism, Fluorescence and Phosphorescence (with energylevel diagram); Transition types; quantum efficiency (yield). Instruments: Fluorometers andSpectrofluorometers; lifetime measurements, Radiative and Natural lifetime, Decay curves, Crystal Field Theory, Applications.

Unit III: Vibrational Spectroscopy

The vibrations of polyatomic molecules, vibrational coarse structure – progressions. Intensity of vibrational transitions – the Franck-Condon principle, .Molecular vibrations and Group frequencies.

Infrared Spectrometry: IR sources; transducers, Instruments: Dispersive and FT-based spectrometers; sample handling. Interpretation of spectra-structure correlations.

Raman Spectroscopy: Origin of Raman scattering (qualitative);comparison of vibrational

Raman and infrared spectra; activity and intensity of Raman bands; depolarization ratio.Quantum theory of Raman Effect, Pure rotational Raman spectra, Vibrational Ramanspectra, Polarization of light and the Raman effect, Applications.Instrumentation; sources; dispersive and FT-based Raman spectrometers; sample handling.Simple applications.

Unit IV: Nuclear spectroscopy

Nuclear Magnetic Resonance (NMR) Spectroscopy:Nuclear Magnetic Resonance:Principles, Classical treatmentof NMR (Bloch equations), Interaction betweennuclear spin and magnetic moment; resonance condition; population of energy levels.Relaxation processes: spin-lattice and spin-spin relaxations (qualitative). The chemical shift and its correlation with molecular structure. Typical NMR spectrometers (cw/FT); sample handling, applications of NMR. Photoelectron spectroscopy Types - UPS and XPS. Experimental method for UPS and XPS. Ionization processes and Koopmans' theorem. Interpretation of UP and XP spectra with applications.

M.Sc. (Physics) (Semester-IV) Paper Code: MO-4 Total Credits: 4-credits Paper title: MODERN OPTICS – IV (Holography and Its applications)

Unit – I: Introduction to Basic Concepts (15) Optical holography, Light waves, hologram formation, wavefront reconstruction, Plane and Volume hologram formation geometries, Basic holography equations. Beginning of Optical Holography, in - line (Gabor) hologram, The off-axis hologram, Image hologram, Fraunhofer hologram, Thin hologram and Volume hologram, Properties of holograms.Critical assessmentof Holograms.

Unit – II: Optical system and Hologram recording materials (15) Optical system:Mechanical Stability in Hologram Formation, Fringe visibility, Optical components,Coherence requirements.Temporal coherence of laser light, Laser safety. Hologram Recording Materials:Optical changes in Photosensitive materials, Exposure & sensitivity, Recordingresolution,Noise and Recording Linearity and Ideal recording material, Silver halidephotographic emulsion, Photoconductor-Thermoplastic films,, Dichromatedgelatine films,Thermoplastic films, Photocromic materials.

Unit – III: Holography and Interferometry (15)

Color Holography, Computer generated holograms in optical testing, Time gated holography, Hologram copying, AcousticalHolography.

Holographic Interferometry: Time average holographicInterferometry, Real time & Double exposure holographic interferometry, electronic holographic interferometry, Difference holographic interferometry.

Unit – IV: Applications of Holography (15)

Imaging applications: Holographic microscopy; Particle size analysis; multiple imaging, Holographic optical elements: Diffraction gratings; filters; scanners, Information storage and processing: Associative storage; pattern recognition; coding and multiplexing; Image processing; information storage.

M.Sc. (Physics) (Semester-IV) Paper Code: SS-3 Total Credits: 4-credits Paper title: Space Physics-III (Magnetospheric Plasma Dynamics)

> Unit-I: The Earth's Magnetic Field and Magnetosphere (15) The Earth's Magnetic Field and Magnetosphere, The magnetopause, the geomagnetic tail, magnetic reconnection-concept, magnetic reconnection and Magnetospheric dynamics, fluid description of reconnection, particle description of reconnection,

> Unit-II: Reconnection at Magnetopause (15) Magnetopause boundary layers, signatures of magnetopause reconnections, patchy, unsteady reconnection, reconnection and the plasma-sheet boundary layer

Unit-III: Magnetospheric configuration (15)

Magnetic field configuration of the earth's magnetosphere, plasma in the earth's middle and inner magnetosphere-plasma in the Earth's near magnetotail, geostationary orbit region, trapped radiation belt and the ring-current particles, plasma sphere, electric fields and Magnetospheric convection, ionosphere-magnetosphere coupling, Ionospheric currents, loss of Magnetospheric particles in earth's atmosphere Unit-IV: Geomagnetic storms (15) Geomagnetic storms, geomagnetic indices, effects of geomagnetic storms on the

Earth's upper atmosphere and ionosphere-electric field and neutral wind disturbances Reference Books:

M.Sc. (Physics) (Semester-IV) Paper Code: SS-4 Total Credits: 4-credits Paper title: Space Physics-III (Ionosphere, Space Weather & GNSS)

Unit-I: Physical and Chemical process in Atmosphere (15)pressures, radiative heating-solar and planetary radiation, radiation trapping-greenhouse effect diurnal and seasonal variations, temperature profiles-troposphere, stratosphere, mesosphere, thermosphere, vertical transport, ion chemistry in the atmosphere, ionization mechanisms, f-region processes, E-region processes, D-region processes

Unit-II: Ionosphere

(15)Structure of the Neutral Atmosphere and the Main Ionosphere, Formation of the ionosphere, photo-ionization and the Chapman production function, ionization by energetic particles, ion loss mechanisms, determination of ionospheric density from production and loss rates, the Earth's ionosphere, high-speed outflow, conductivity and current systems

Unit-IIII: Implications of Space weather effects

(15)Electrical charges in the atmosphere, aurora, geomagnetic fluctuations, radio propagation, Effect on satellite electronics, satellite charging, satellite drag, heating of the neutral atmosphere, Effect on radio wave propagation, effect on communications and navigational outages

Unit-IV: Global Navigation Satellite System (GNSS) (15)GNSS Systems, GPS (United States), GLONASS (Russia), Galileo (European Union), BeiDou (China), IRNSS (India), QZSS (Japan), GNSS Architecture, Space Segment, Control Segment, User Segment, GNSS Signals, GNSS Positioning, GNSS User Equipment, GNSS Antennas, GNSS Receivers, GNSS Augmentation

Reference Books:

- 6. An Introduction to GNSS GPS, GLONASS, BeiDou, Galileo and other Global Navigation Satellite Systems, scond edition, Published by NovAtel Inc. ISBN: 978-0-9813754-0-3

M.Sc. (Physics) (Semester-IV) Paper Code: TH-3 Total Credits: 4-credits

Paper title: Theoretical Physics-III (Interaction of Electromagnetic Waves with Electron Beams and Plasmas)

UNIT 1 BASIC EQUATIONS AND PROPERTIES OF LINEAR WAVES (15) Introduction, Maxwell Equations, Dispersion Relation, Energy Density and Energy flow, The Kinetic equation, Fluid equations, Plasma response to an electromagnetic wave, Diffraction divergence, Dispersion broadening, Electromagnetic wave propagation in an Inhomogeneous plasma, Surface waves, Duct propagation, Thomson scattering of Radiation, Anomalous resistivity (LiuTripathi 1-44:44)

UNIT 2 RESONANCE ABSORPTION, PLASMA WAVE EXCITATION, COHERENTEMISSION OF RADIATION (15) Current Density, Coupled Mode Equations, Mode conversion Excitation of a Langmuir wave, Electron Acceleration in a Langmuir wave Phase coherence and Bunching, Cerenkov FEL, Free Electron Laser (LiuTripathi 45-87:43)

UNIT 3 SELF-FOCUSSING AND FILAMENTATION, PARAMETRIC INSTABILITIES IN A HOMOGENEOUS PLASMA (15) Nonlinear Permittivity, Self-focusing, Filamentation Instability A Harmonic oscillator, parametric oscillator with two degrees of freedom, Parametric Coupling in a Plasma, Nonlinear dispersion relation, Stimulated Raman scattering, Stimulated Compton scattering, Stimulated Brillouin scattering, Non-linear ion Landau damping, Modulational Instability, Filamentation Instability, Decay instability, Oscillating two-stream instability, Two-Plasmon decay, Parametric instability of a Random Pump (LiuTripathi 88-133:46)

UNIT 4 A NONLINEAR SCHRODINGER EQUATION AND PARAMETRIC INSTABILITIES IN AN INHOMOGENEOUS PLASMA (15) Basic equation, Stationary solution, Instability of an Envelope Soliton, Criterion for Collapse WKB Solution, Raman Side scattering, Brillouin Side scattering, Scattering off a Heavily damped Ion Acoustic Mode, Decay Instability, Oscillating two-stream Instability, Two-Plasmon decay (LiuTripathi 134-166:43)

TEXT AND REFERENCE BOOKS

- 1. C S Liu and V S Tripathi, Interaction of Electromagnetic waves with electron beams and Plasmas, World Scientific, 1994
- 2. Introduction to Plasma Physics and Controlled Fusion by Francis F. Chen (2nd edition), Springer International Edition.

The problems given in the Text and Reference books will form tutorial course.

M.Sc. (Physics) (Semester-IV) Paper Code: TP-4 Total Credits: 4-credits Paper title: Theoretical Physics-IV (Introduction to Quantum Field Theory) Total Credits: 4-credits

Unit-I Single particle relativistic wave equation (15) Relativistic Notation, Klein-Gordan equation, Dirac equation, Prediction of antiparticles, Dirac matrices and Dirac spinors, Non-relativistic limit and electron magnetic moment, Relevance of Poincaré group: spin operators and zero mass limit, Maxwell and Proca equations.

Unit-II Canonical quantization of spin zero, spin half and spin one fields (15) Lagrangian formulation, The real scalar field, Complex scalar field and electromagnetic field, Canonical quantization of real and complex Klein-Gordan field, Canonical quantization of Dirac field, Quantization of electromagnetic field, The massive vector field.

Unit-III Path integral quantization of spin zero and spin half fields (15) Path integral formulation of quantum mechanics, Perturbation theory and Smatrix, Coulomb scattering, Functional calculus: Differentiation, Properties of path integral. Generating functional for scalar fields, Functional integration, Free Green's function, Generating functional for interacting fields, $\Phi 4$ theory, Generating functional for connected diagrams, Fermions and functional methods, The S-matrix and reduction formula, Pion-nucleon scattering amplitude, Scattering cross section.

Unit-IV Path integral quantization of gauge fields (15)

Propagators and gauge conditions in QED, Non-Abelian gauge fields and the Faddeev-Popov Method, Self energy and vertex function, Ward-Takahashi identities in QED, Becchi-Rouet-Stora transformation, Slavnov-Taylor identities.

ENERGY SCIENCE LAB-II

List of Experiments

- 1. Solar Line Concentrator (I)
- 2. Solar Line Concentrator (II)
- 3. Solar Pont Concentrator
- 4. Solar Still
- 5. Solar Dryer
- 6. Solar Cooker
- 7. Flat Plate Collector
- 8. PV IV Characteristics
- 9. PV-Water Pumping System
- 10. PV-Spray System
- 11. Flue Gas Analyser
- 12. Wind Energy Conversion
- 13. Partical Size Measurement
- 14. Close Cycle Cryogenic System
- 15. Hot Water Bumb
- 16. 3kW Aerogenerator

MATERIALS SCIENCE LAB-II

List of Experiments

- 1. Brinell hardness
- 2. Effect of dip coating cycles on wettability of the thin film
- 3. Hysteresis loop tracer
- 4. Band gap of semiconducting thin films
- 5. Abrasion tests of thin films/coating
- 6. Intensity calculations by using XRD- pattern
- 7. Optical properties of thin films by UV-VIS spectrophotometer
- 8. Microstructure of steels
- 9. Crystal growth by gel technique
- 10. Contact angle measurement

Tutorials

1 Tutorials will consist of 3-4 experiments based upon syllabi of theory paper of Materials Science.

SOLID STATE PHYSICS LAB-II

List of Experiments

Group I:

[1]Particle size analysis by dynamic light scattering

- [2] Photoelectrochemical Solar Cell
- [3] Characteristics of phototransistor and LDR
- [4] Spectral response of solar cell
- [5] Gas sensing properties of thin film
- [6] I-V characteristics of solar panel
- [7] Analysis of EIS spectrum
- [8] I-V characteristics and solar cell parameters

Group II:

- [9] Analysis of FT-IR and FT-IR spectra
- [10] Cyclic Voltammetry and electrochromism
- [11] Supercapacitivebehaviour of MnO₂ sample
- [12] Specific area by BET method
- [13] Analysis of PL spectrum and calculation of life time of defects
- [14] Analysis of TG-DTA pattern
- [15] Analysis of XAFs pattern

MODERN OPTICS LAB-II

List of Experiments

- 1 Vibrational analysis of CN
- 2 Vibrational analysis of AlO
- 3 Vibrational analysis of C2
- 4 Mixture analysis
- 5 Solar Spectrum
- 6 Temperature of flame
- 7 Measurement of Brewster angle and R.I. of materials like glass
- 8 Determination of wavelength of light by grating
- 9 Production and analysis of polarized light with the help of He-Ne laser
- 10 Fabry-Parot etalon Exact fraction method
- 11 Recording of IR spectra
- 12 CD-spectrometer by using Hydrogen and Helium lamp.

Depending on availability of new experimental kits, few new experiments will be added to this list

SPACE SCIENCE LAB-II

List of Experiments

- 1. Sky observations-I (Moon & Planets)
- 2. Sky observations-II (Binary stars & Nebula)
- 3. Geomagnetic Indices-Kp and Ap
- 4. Interplanetary Magnetic Field (IMF)
- 5. Sun's Magnetogram
- 6. Solar Dynamic Observatory(Sun Now)
- 7. Solar Proton Events
- 8. Geomagnetic Events
- 9. Magnetometer
- 10. GOES Electron Flux
- 11. GOES Magnetometer
- 12. GOES Proton Flux
- 13. GOES Solar X-ray Imager
- 14. GOES X-ray Flux
- 15. LASCO Coronagraph
- 16. Planetary K-index
- 17. Real Time Solar Wind
- 18. Van Allen Probes Radiation Belt

THEORETICAL PHYSICS LAB-II (4-credits)
